Dear Provider/Administrator/Superintendent:

It is more important than ever to protect your residents/clients and staff from COVID-19, flu, and pneumonia during the ongoing COVID-19 pandemic.

Flu and COVID-19 are both highly contagious and continue to circulate in Washington state. Staff, visitors, and newly admitted residents can easily bring these illnesses into your facility/home. Your residents/clients can develop severe illness from flu and COVID-19, including complications like pneumonia. These illnesses can be fatal, especially for high-risk individuals. Learn more about the similarities and differences between flu and COVID-19.

The flu and COVID-19 vaccines are your best protection against these illnesses. Since it is possible to have flu or other respiratory illnesses AND COVID-19 at the same time, the flu and COVID-19 vaccines will lower one’s risk for these illnesses, help protect essential health care workers, and help save limited health care resources for those who need it most.

To minimize the impact of COVID-19, flu, and pneumonia in your facility/home:

1. Encourage ALL residents/clients and staff to stay up to date on their COVID-19 vaccination status, get the flu vaccine by the end of October, AND encourage residents/clients and staff to get the pneumococcal vaccine as needed. Washington currently requires the COVID-19 vaccine for health care workers and long-term care workers. As of October 18, 2021, employees are required to be fully vaccinated against COVID-19 (fully vaccinated is defined as at least two weeks after finishing the vaccine series). The requirement includes contractors, volunteers, and any other positions that work in these settings. Currently, the vaccines authorized and recommended in the United States to prevent COVID-19 are: Pfizer-BioNTech (monovalent and bivalent), Moderna (monovalent and bivalent), Novavax, and Johnson & Johnson (Janssen). The bivalent boosters recently approved by the U.S. Food and Drug Administration (FDA) strengthen protection against the omicron variant, and can only be administered to those who have completed their primary series. The Advisory Committee on Immunization Practices (ACIP) and Western States Scientific Safety Review Workgroup recommend staying up to date with vaccines and boosters. Visit the Department of Health’s COVID-19 vaccine webpage, [www.CovidVaccineWA.org](http://www.CovidVaccineWA.org) for up-to-date information on how to get the vaccine and for materials to share with your residents/clients.

Think of it as your best defense. Get a flu, COVID-19, and pneumonia vaccine.

The flu vaccine is updated every year to protect against the strains that are expected to circulate during the upcoming season. Fall is the best time to get vaccinated because it ensures protection before flu begins to circulate widely. There are specific flu vaccines for those aged 65 years and older, such as Fluzone High-Dose and FLUAD, which are intended to give additional protection from flu. Flu, pneumococcal, and COVID-19 vaccines may be administered at the same time. Staff who have not received the flu vaccine before the end of October should get vaccinated as soon as possible. For more information on immunizations for seniors, visit the DOH Immunization for Seniors webpage.

2. Wash your hands and use alcohol-based hand sanitizer frequently. Many of the healthy habits used to prevent flu also help prevent COVID-19. Promote proper hand-washing among your staff and residents/clients to minimize germs.

3. Wear a face mask. Masks continue to be required in long-term care facilities and other health care settings. Masks may help prevent people who have COVID-19 from spreading this virus (and other viruses) to others.

4. Call your local health jurisdiction whenever a resident/client tests positive for COVID-19 or flu, or if you see a sudden increase in acute respiratory illness (two or more ill residents/clients within 72 hours). Your local health jurisdiction can advise on testing, antiviral treatment, prophylaxis, and infection control. Visit www.doh.wa.gov/localhealth to find your local health jurisdiction.

5. Report a suspected outbreak of COVID-19, flu, or any other communicable disease to the Department of Social and Health Services online or by calling the hotline at 1-800-562-6078. This chart can help you identify the similarities and differences between the symptoms of COVID-19, flu, the common cold, or allergies.

6. Review your facility/home’s ability to implement infection prevention standards and meet the health care needs of residents/clients with suspected or confirmed COVID-19 or flu. A facility/home can admit/readmit a recently ill resident/client if the facility determines they can meet all care and service needs AND follow infection control standards. For infection control guidance, visit www.doh.wa.gov/Portals/1/Documents/5100/fluoutbrk-LTCF.pdf. The following additional resources can help you prepare for heightened flu activity:
   - Department of Health: www.knockoutflu.org
   - Department of Social and Health Services: See Flu Information/Adult Immunization Resources at www.dshs.wa.gov/altsa/residential-care-services/residential-care-services
   - Advisory Committee for Immunization Practices (ACIP) Vaccine Recommendations: www.cdc.gov/vaccines/hcp/acip-recs
   - Consider registering for the Washington Flu Fighter Facility recognition program to identify and overcome barriers related to vaccinations: Flu Fighter Facility Award: WA DOH

We encourage you to continue to adhere to the Standards for Adult Immunization, which include routinely assessing the immunization status of all residents/clients and strongly recommending and encouraging vaccines based on the needs of each resident/client. If your facility/home provides immunizations, please administer and document all vaccines given. If

your facility/home does not provide immunizations, please refer residents/clients to a vaccination provider and document that vaccines were given.

For more information about the Standards for Adult Immunizations, visit doh.wa.gov/you-and-your-family/immunization/adult/standards-adult-immunization-practice.

Thank you for your continued efforts to help fight flu, pneumonia, and COVID-19.

Sincerely,

Mike Anbesse, Director
Residential Care Services

Umair A. Shah, M.D., MPH
Secretary of Health
