# **Understanding Traumatic Brain Injury: Part 2**

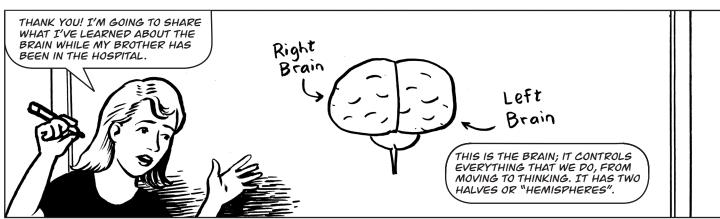

#### RECAP FROM PART 1...

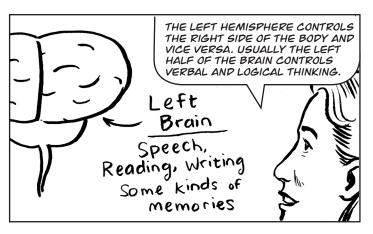

Mike is about to come home from the hospital, where he was on the inpatient rehabilitation unit because of his TBI. While he was there we met different therapists that he worked with and saw his family use the problem solving method. People around him are starting to notice that he's acting a bit differently. His sister Sam is about to give a class presentation about what she learned while he was in the hospital.

#### AVOIDING OVERSTIMULATION

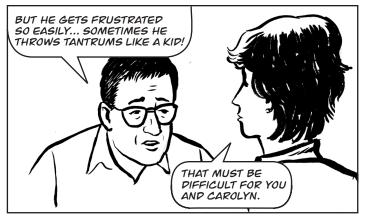

Agitation can be heightened by too much activity or stimulation. Here are a few ways to help avoid overwhelming people with TBI. Some of these suggestions may not apply to your situation.

- Limit the number of visitors (1 or 2 at a time).
- Not more than one person should speak at a time.
- Use short sentences and simple words.
- Present only one thought or request at a time, and allow extra time for a response.
- · Use a calm soft voice when speaking to them.
- Keep stimulation to one sense (Hearing, visual, or touch) at a time.
- Avoid crowded places like shopping centers or sports stadiums.

# TBI AFFECTS THE WHOLE FAMILY

A TBI affects not only the person who sustained the injury, but the whole family. Some common problems experienced by families are having less time for themselves, changes in the roles that they play, feelings of loss, financial difficulties, communication problems, and lack of understanding or support from extended family and friends.

# Ways to Respectfully Support a Person with TBI

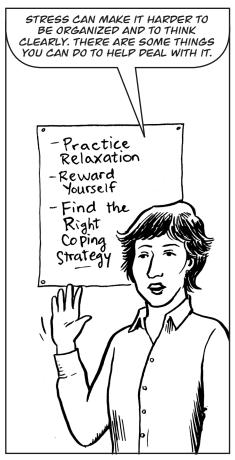

- · Treat them like adults
- Respect their preferences in regards to music, food, clothes, and entertainment
- Avoid making them feel guilty about mistakes or accidents, like spilling something.
- If the person has memory problems, explain an activity as simply as possible before you begin. Then as you do the activity review each step in more detail.
