Introduction

The Department of Social and Health Services (DSHS) Children’s Administration (CA) has the overall authority and responsibility to protect employees, clients, automated data systems, and business operations during an event that causes interruption of normal day-to-day business or which may cause harm. The CA Emergency Management Plan and the DSHS Comprehensive Emergency Management Plan provide the foundational framework and roadmap to analyze and mitigate potential probable threats and risks associated with an emergency event. The Continuity of Operations Plan identifies business operations, service delivery, and key employees and their roles during and after an emergency or disaster event (see also Appendix 1(B) Attachments 3, 5, 6, 7, and 8).

Threat or disaster events occur in many forms, e.g., fire, flood, bomb threat, threat of physical injury, technological threats, weapons, pandemic disease, bio-terrorism, civil disturbance, natural disasters, gas or hazardous chemical leaks, utility failures, or any other event that places the environment at risk of being unsafe or uninhabitable for clients, visitors, and employees. Such events may require DSHS participation in a standard incident response system. Key emergency numbers and areas of responsibility are attached (see Appendix 1(B) Attachment 2).

Emergency Event Response

Response to an emergency event depends on its classification level. The local site or program makes the first determination regarding the emergency and command levels and immediate notification requirements. The Emergency Notification and Command Levels (see Appendix 1(B) Attachment 3), the Initial Report of Emergency and other tools (see Appendix 1(B) Attachment 4) are attached. The Secretary and Assistant Secretary determine the individuals needed to respond to the event.

Triage and Notification

- minor problem
- major event
- phone call
- email
- FAX, other
- management or call center
- receives notification of minor problem
- receives notification of major event
- triage initial report of emergency

Level I
- minor
- action taken to resolve incident
- no further action required

Level II
- major
- appropriate DSHS ICS sections activated
- (yes) situation resolved (no)
- consider escalating to DSHS EST

Level III
- catastrophic
- activate DSHS EOC
- activate appropriate DSHS ICS sections
- notify EMD shared ICS command
Incident Command System

An essential piece in emergency planning is determining who is in charge during an event and what they need to do. Minor events may not require establishing a command structure. Large scale events may require multiple command teams responding to a single incident.

If a major or catastrophic event occurs, the department may activate an Incident Command System (ICS). This includes certain Level 2 events—all events that affect DSHS co-located facilities—and all Level 3 events. The National Incident Management System (NIMS) requires that response to all domestic incidents use a common management structure that enables all government, private-sector, and non-governmental organizations to work together during domestic incidents. The Incident Command Team consists of a leader, the Incident Commander, and other staff who are responsible for the various parts of the plan. The Incident Commander has overall responsibility for managing the event by objectives, planning strategies, and implementation tactics. The number of Incident Command System staff needed to respond to an emergency depends on the size and seriousness of the event.

DSHS Headquarters Command Emergency Support Team (EST): The Headquarters Command EST functions only during certain major or catastrophic events. Its role generally is to support regional and local command teams; however, it could be designated as primary command in a large scale event. In a catastrophic event, this EST will likely be coordinating with other state agencies and the federal government.

The DSHS command structure ensures an orderly response to an event, which leads to the recovery of business operations and service delivery. Emergency response should occur at the lowest organizational level possible. Command teams within DSHS:

- **Local Command Team** responds and manages an incident at the site where the incident occurred (facility or office).
• **Program or Support Services Incident Command Teams** manage the continuity of service delivery. They generally do not originate from the site where the incident occurred. They may operate remotely from the affected site or they may travel to the affected site.

• **DSHS Regional Emergency Support Teams (EST)** will be established in all regions (1-6) and consists of staff representing each of the DSHS Administrations that have employees or services in the field. Generally, these teams function only during certain major or catastrophic events to support local command teams and provide command coordination.

Children’s Administration may establish an Incident Command Team at the headquarters level. The Assistant Secretary or designee will assume the role of Incident Commander and coordinate with and take direction from the DSHS Secretary through the Executive Team or the DSHS Emergency Support Team, if activated. The Incident Command Team has responsibility for communicating with the secondary level of response teams.

In the event of a major or catastrophic disaster, the Children’s Administration headquarters may activate its Emergency Planning and Response Team (EPRT) (see Appendix 1(B) Attachment 1) to assist the affected area(s) and support the continuance of vital services.

**Children’s Administration Incident Command System (ICS)**

**Emergency Planning and Response Teams (EPRTs)** provide planning and leadership, and respond to emergency situations or disaster events for DSHS programs, facilities, and worksites. These teams report to the Division Director, unless directed otherwise. Their purpose is to minimize the impacts of emergencies and disasters on the people, property, environment, and economy of Washington State. They function to:

- Protect the safety of staff, clients, and visitors and protect state physical assets.
- Assure business continuity.
- Establish emergency communication with DSHS Headquarters and Regional Command centers.
- Support local jurisdiction responders and state-wide emergency responders in the case of a disaster.
The Emergency Planning and Response Teams established in each Division within the Children’s Administration perform response and recovery activities according to their program areas. The following are the primary activities for each Division (see also Appendices 5-8).

**Disaster Response and Recovery Responsibilities by Division**

Depending on the severity and location of the event, the Assistant Secretary or designee may activate a Children’s Administration Emergency Operations Center (EOC). During some events, the Assistant Secretary may take a role with the DSHS Emergency Support Team. In that case, the management of the event within Children's Administration will be assumed by the Emergency Operations Center Commander.

The incident command team located at the EOC may direct the deployment of the divisional Emergency Planning and Response Teams (EPRTs) and make executive level decisions to begin the business recovery process following a disaster.
Major or Catastrophic Disaster Response Process

Disaster Affected Offices
Activating the command plan and the level of activation will be determined by the Incident Commander, or designee.

Displaced Caregivers—Continuity of Vital Services
Disaster response emergency call centers will be activated as appropriate to respond to new calls for services and child abuse and neglect referrals (intake), as well as serve as a point of contact for foster parents, biological parents, and other caregivers (see also Appendix 1(B) Attachment 9).
# Command Priority Activities

The Incident Command Team performs response and recovery activities to achieve short and long-term goals and objectives. These include, but are not limited to the following command priorities.

## Command Priority Activities

### Assistant Secretary

<table>
<thead>
<tr>
<th>Key Position</th>

</tr>
</tbody>
</table>

Activates and directs FOSD Emergency Planning and Response Team (EPRT).

Ensures immediate emergency response to safeguard placements through continuous flow of payments to foster homes, caregivers, facilities, service providers, and vendors within affected areas. This includes maintaining contract administration integrity.

Maintains continuous human resource support to ensure adequate workforce within affected areas and ensure continued compensation/benefits to staff.

 Coordinates with the Field Operations Division regarding human resource activities, resolves issues, and determines status of personnel adversely affected by the event.

Coordinates with the Field Operations Division regarding staff redeployment, stress-management resources, counseling, guidance, and support.

Facilitates preparation and submission of any injury reports or medical claims, and assists with disaster-related notifications.

Assists response and recovery teams with travel arrangements to alternate operational sites.

Reviews leave policies and works with the Union, Department of Personnel, and the DSHS Human Resources Division to implement waiver process for absenteeism caused by emergent situation.

Coordinates with the OB-2 building Safety Committee and DSHS EPRT teams should building evacuation be necessary; accounts for all agency personnel who were present in the building and secures the premises.

(253) 380-6855 (Cell)
(206) 954-4276
(Pager/Blackberry)
(206) 281-6306 (FAX)

Deploys staff as needed for continuity of operations during and after the emergency, including staffing for the Regional Emergency Operations Center (EOC) and the local emergency call center, if activated.

Communicates with adjacent states to provide continuity of service delivery to children transferring across state lines; ensures that regional and state ICPC managers are kept informed on a daily basis of any and all children crossing state lines.

Implements protocols to communicate with regional and headquarters staff on status of emergency, including resource needs.

Implements the transition plan to restore normal operations.

(360) 725-6769 (FAX)
Lines of Succession

Lines of succession for key positions are established and maintained to ensure continuity of operations. The line of succession should be of sufficient depth to ensure the agency’s ability to continue to provide vital services should a disaster disrupt normal operations.

In the event an individual is unable to fulfill the key role, the alternate will assume responsibility for the program area. Alternates are empowered to act on behalf of the key individual. While the previous pages identify one alternate for the key positions, the program, regional, and worksite plans identify additional individuals empowered to act on behalf of the key position.

In the event of a catastrophic disaster, delegation of authority may be transferred to another DSHS office or administration.
EMERGENCY PLANNING AND RESPONSE TEAM (EPRT)

**FACILITY, WORKSITE, OR PROGRAM:**

<table>
<thead>
<tr>
<th>Facility, Worksite, or Program Name:</th>
<th>Administration/Division:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Headquarters, OB-2</td>
<td>Children’s Administration</td>
</tr>
</tbody>
</table>

**Facility and Program Type:** (identify all that apply)

- Residential (24 hr/7 day care)  
- Office  
- Warehouse or Shop  
- Staff access only  
- Staff and client access  
- Direct Client Interaction (in-person or by phone)  
- Other: (specify)

**Plan Type:** Check appropriate box to describe the purpose of this emergency plan.

- Worksite  
- Facility Providing Residential Care  
- Office or facility (non-residential) with 11 or more staff  
- Program  
- Administration Vital Service Plans  
- Support Plan  
- Specialized or Support Service Plans  
- Command Plan  
- Headquarters

**Address:**

1115 Washington St. S.E.  
City: Olympia  
County: Thurston  
Region:

**FORM PREPARED BY:**

| Name: Marianne K. Ozmun | Position: Communications Mgr | Phone #: 360-902-7928 | Date: 05/26/09 |

**PLANNING AND RESPONSE TEAM MEMBERS**

*Training recommended for all team members, especially those with incident response responsibilities. Training is required for those Team Roles marked with an asterisk.*

EMERGENCY NOTIFICATION AND COMMAND LEVELS

Local site or program complete Initial Report of Emergency

Local site or program determines emergency level, command level, and immediate notification requirements

LEVEL 1 MINOR
NO COMMAND Incident managed “at-site” with regular administrative processes.

LEVEL 2 MAJOR
LOCAL COMMAND Incident managed “at-site” with local site or program command team.

LEVEL 3 CATASTROPHIC
AGENCY COMMAND Incident managed by DSHS Regional or Headquarters command team (Emergency Support Team)

STATE-LEVEL COMMAND Incident managed by command team external to DSHS. (another agency, Emergency Management Division, fire or police jurisdiction)

REGULAR NOTIFICATION
By next business day, fax or email copy of Initial Report of Emergency to Emergency Management Coordinator

IMMEDIATE NOTIFICATION
Call immediately the Emergency Management 24-hr call center (see page 2 for instructions)
IMMEDIATE NOTIFICATION REQUIREMENT

CALL IMMEDIATELY THE 24-HOUR EMERGENCY MANAGEMENT CALL CENTER AND FAX OR EMAIL THEM A COPY OF THE Initial Report of Emergency

CALL CENTER RECEIVES CALL AND REPORT. NOTIFIES EMERGENCY SUPPORT TEAMS VIA PHONE, FAX, AND EMAIL.

Headquarters Emergency Support Team emergency contacts receive call.

Fax and email written report to Headquarters and Region office.

Regional Emergency Support Team emergency contacts receive call.

Coordination between Headquarters, Regional EST contacts, and impacted site/program emergency contact.

EST contacts decide if Headquarters or Regional support is needed. Deploy as needed.

Status report or decision confirmation to Secretary.

Notify Governor’s office or EMD as needed.

If EOC activated, provides regular status reports to Regional or Headquarters EST or Secretary.

INTRODUCTION

Overview
The Children’s Administration Technology Services (CATS) Division headquarters is located at 7240 Martin Way East in Lacey, Washington. There is also field support staff in every region and many offices around the state. The Division is the primary organization directly responsible for supporting all information technology services for Children’s Administration (CA). This division operates under policies, guidelines, and requirements established by the Department of Information Services (DIS) and the Department of Social and Health Services (DSSHIS) Information Systems Services Division (ISSD).

Mission
CATS provides and maintains the infrastructure, hardware, and software for all CA IT operations. Software application training and technical support are provided in the field. In addition, CATS provides the development and maintenance of the primary database system used by CA, Case and Management Information System (FAMLINK). Currently, a 3-year project is underway to replace this system with a modern web-based system called FamLink. Contracted project staff for this effort are also located at CATS HQ. The CATS Web Team supports all web-based communications for CA.

The major statewide mission of CATS for CA’s emergency preparedness is to assure the backup, retention, protection, and recovery processes for FAMLINK and CA Server client-related data and related software. These activities are described in the “Data Risk Mitigation and Recovery Activities” below.

Purpose
The purpose of this document is to specify CATS’ preparations, responsibilities, hazard mitigation strategies, and follow up to any expected emergency or disaster for the CATS HQ worksite and for the Division operations statewide. This is in compliance with the requirements of CA’s Emergency Response Planning Guide.

Organization
CATS is a Division within CA Headquarters. CATS Headquarters is located in a separate building in Lacey, with many technical and training field support staff also located in major CA field offices statewide. The CATS Division is organized into the following major activity areas:

- CATS Administration—Dawn Tatman, Division Director; Nick Fuchs, Deputy Manager
- Communications – T Simmons, Manager
- Infrastructure Support Services—Narvie Seals, Manager
- Application Maintenance and Development—Marty Belfield, Manager
- FamLink Project—Patty Conway, Project Manager

Scope
The scope of this plan includes emergency preparedness to:

- Establish a clear emergency response system for CATS’ command and control, communications, response options, contingency plans, and disaster recovery at the worksite.
- Plan for the protection of the safety and health of CATS staff during and following anticipated emergencies.
- Plan for the protection, back up, and recovery of CA’s information technology infrastructure and desktop equipment to provide continuity of service and communications during and after anticipated emergencies.

June 30, 2009
POLICIES

Authorization
The authority and guidance for this plan is given in the Children’s Administration Emergency Response Plan.

Responsibilities
CATS’ primary divisional emergency responsibilities as stated in the CA Emergency Response Plan (pp 14-15) are:

- Authorizes technical assistance to affected areas to implement communications recovery strategies and procedures to minimize loss of client data, and maintain access to client data by field social workers to ensure the safety, permanency, and well-being of children and youth under state care or supervision.

- Authorizes access to redundant systems, and the acquisition, distribution, and maintenance of IT, and voice communications equipment and systems.

- Authorizes impact expenditure decisions and reports recovery progress through the CA management structure.

Limitations
The CATS goal is to mitigate and prepare for the consequences of hazards, respond, and recover in the event of an emergency or disaster. However, CATS resources and systems may become overwhelmed in the event of a major incident and not all contingencies may be anticipated nor mitigated throughout any phase of planning, and operations.

Post event critique and lessons learned will assist in better preparation for the next event.
SITUATION

Emergency/Disaster Conditions and Hazards
Emergencies or disasters can occur causing human suffering, injury, death, property damage, environmental degradation, loss of essential services, economic hardship, and disruption to state, local, and tribal governments. IT infrastructure and equipment is especially vulnerable to earthquake, fire, and flooding.

CATS will use three tools to identify information on the natural and technological (human-caused) hazards throughout the state.

- The Washington State Hazard Identification & Vulnerability Assessment (HIVA). The HIVA assesses the state’s vulnerability to hazards, provides a methodology for analyzing hazards, and provides the basis for this Plan.
- The DSHS Agency Annex for the 2003 Washington State Hazard Mitigation Plan identifies by region the possible hazards.
- DSHS Hazard and Risk Vulnerability Self Assessment which allows site self-assessment for probable hazards.

Washington State is vulnerable to the natural hazards of avalanche, drought, earthquake, flood, landslide, severe storm, tsunami, volcano, and wild land fires.

Washington State is vulnerable to many technological (human-caused) hazards associated with abandoned underground mines, chemicals, civil disturbances, dam failures, hazardous materials, pipelines, radiological releases, terrorism, transportation incidents, and urban fires.

Planning Assumptions
The following assumptions impact the approach to the activities described in this plan:

- Some emergencies or disasters will occur with sufficient warning that appropriate notification will be issued to ensure some level of preparation. Other situations will occur with no advanced warning.
- CATS may be unable to satisfy all emergency resource requests during a major emergency or disaster.
- The CATS worksite will need to provide their own resources for the first three days of an emergency or disaster. Evidence has shown that seven to fourteen days may be more realistic.
- CATS will comply with the intent of Chapter 38.52 RCW and Title 118 WAC and the CA Emergency Response Plan.
- CATS will have its own comprehensive worksite emergency management program that enables them to:
  - Determine vital services and establish procedures for continuity of service delivery.
  - Support the specific needs the worksite by ensuring the health and safety of staff, clients, visitors, and agency assets.
  - Support local jurisdiction responders.
  - Support the CA, DSHS, and state emergency management missions.
  - Establish a communication chain with the Children’s Administration Management Team and local emergency partners.
  - Communicate through CA HQ.
- Provide situation reports to convey damage assessment and ability to accomplish their functional role during an emergency or disaster.
- Develop and implement local protocols that reduce the effects of an emergency or disaster.
- Preserve essential electronic and documentary records.

- For catastrophic incidents with community social and economic consequences, federal assistance may be available for disaster response and recovery operations under the provisions of the National Response plan (NRP). CATS will coordinate with the CA Emergency Support Team to develop the application for Federal assistance.

**CONCEPT OF OPERATIONS**

**Management of Emergencies**
The CATS Division Director, or designee, is responsible to the Assistant Secretary for CA to carry out the emergency management program for the CATS Division, including:

- Coordination of CATS activities with CA HQ for emergency management within the Administration.
- Responsibility for high-level emergency level management and coordination with CA HQ.
- Responsibility for coordinating with the CA Emergency Support Team (EST) for determining the level of emergency response and recovery activities required during a disaster or pandemic event, and whether or not to activate the CATS Emergency Operations Center (EOC).
- Communication of critical information from CA Assistant Secretary, or designee, to CATS Management Team. Each level supports the next lower level as described in the Continuity of Operations Plan.
- Coordination with the CA EST regarding all public information activities during a disaster or pandemic event. Designated individuals will gather accurate disaster information and promptly inform CATS management and employees, using appropriate communication channels. *Only authorized personnel are allowed to grant interviews and answer questions from the press and public in an emergency or disaster situation.* These individuals will provide accurate, essential, and timely information to thwart the spread of rumors, misinformation, and adverse publicity.

The Assistant Secretary for CA, or designee, will be responsible for initiating public information actions in the event that a catastrophic event disables HQ's operations on the coast (Olympia), and the Children’s Administration central command is transferred to either Region 1 or 2 during the initial stages of the event, and until HQ can reestablish operational control and resume business operations.

**Direction and Control**

Direction and control provides supervision, authority, coordination, and cooperation of emergency management activities to ensure the continued operation and delivery of vital services during emergencies.

CATS Incident Command System (ICS) will occur at the lowest level sufficient to meet the demands of a specific event. The severity and scope of the incident will determine the level of support required. Local events generally require a minimum level of response and recovery support. Consequently, implementation of response and recovery procedures may occur at the unit, worksite, region, or agency-wide.
Command Model
Overall responsibility for the CATS Incident Command System (ICS) rests with the CATS Director, or designee. While overall planning, control, and event analysis will occur at the Director level, Division Managers, supervisors, leads, and individuals assume responsibility at their assigned level.

CATS has identified members to serve on the CATS Emergency Preparedness, Response, and Recovery Team (EPRT). This team is identified to support specific functional areas, for example infrastructure, telecommunications, and data recovery. These identified individuals will be the first line support to an impacted worksite to assist in response and recovery operations related to technology support.

Incident Command System (ICS)
The CATS ICS team responds to and manages an incident from the Emergency Operations Center established in the Director’s office at CATS’ HQ in Lacey or an external EOC if CATS’ HQ is uninhabitable or inoperable. Local technical response teams will be deployed to the location where an incident occurred (facility/office/area). The number of ICS staff needing to respond to an emergency depends on the size and seriousness of the incident. Very small incidents only need a technical team assigned with no standing ICS. Large disasters could require multiple ICS teams responding to a single or multiple sites, including the local ICS, a regional or headquarters ICS, and even an ICS from the community such as fire or police responders. ICS teams within CA are as follows:

- **Internal Incident Command (IC) Team**
  At the Division level, this function is the responsibility of the Division Director, or designee, who directs and assigns individuals to ensure that continuity of business operations occurs to maintain vital services. The Director, or designee, will provide direct oversight for coordination activities with local agencies and resources that may be of assistance.

- **Program or Support Services Incident Command Teams**
  These teams manage the service delivery. They may not originate from the site where the incident occurred. They may operate remotely away from the impacted site(s) or may travel to the site. The responsibility for directing the activities of this team for CATS rests with the Director working in coordination with the CA EPRT to redirect/redeploy staff and resources to impacted site(s).

Command Implementation
Not all ICS elements need to be established during an emergency incident. The Incident Commander (IC) will establish the need and identify the team membership. This may vary depending on the size and severity of the incident. For minor incidents or emergencies, the administration of the site or program may choose to deal with the incident directly, or delegate this responsibility locally. This may not require the activation of the ICS or EPRT systems. For certain major or catastrophic incidents, CATS will need to establish their Incident Command Team and structure. The Incident Command System (ICS) will be the model utilized to accomplish this task.

There is no correlation between rank or position within CA and the role you may be assigned.
within the ICS structure. The Director may choose to delegate the position of Incident Commander (IC) to the Safety Officer or other individual during an actual emergency event. The first person on the scene assumes the role of the IC until relieved by someone with that designated role.

HR
Emergency Operations Centers (EOC)—CATS, CA HQ, and State:

A CATS Emergency Operations Center is established to support the command team in coordinating emergency response activities. It is generally activated only for a large scale incident that requires more complex management or coordination. It may be a temporary facility at the site of the event or can be at a remote location.

CATS EOC
The CATS EOC will be at CATS HQ, Director’s Office unless the building cannot be occupied or has lost critical services. The address is 7240 Martin Way East, Lacey, WA. The main contact number is 360-412-3952.

CA HQ EOC
In the event that CA Headquarters requires an EOC, it will be located at Office Building 2, 1115 Washington St. SE, Olympia, Washington. If OB2 is not functioning, the location of the alternate EOC is determined as conditions dictate, and can include a temporary structure in the gravel parking lot at 14th and Jefferson, Olympia, Washington.

State EOC
The State EOC establishes response, and recovery support for statewide emergency priorities. Priorities are determined by the extent, size, duration, and complexity of the emergency or disaster, and the availability of resources. The State EOC is generally activated for an incident at the state level or upon request. DSHS can request assistance through the state EOC, when public, private, mutual aid, and inter-local agreement resources are depleted, or at the request of the DSHS Secretary. Similarly, the CA Assistant Secretary, or designee, can request support through the DSHS EOC and EST.

Intra-agency Coordination

Emergency response activities are initiated whenever conditions exist in which normal operations cannot be performed and immediate action is required to:
- Save and protect lives, health, or welfare of clients, staff, and the public;
- Prevent damage to the environment or physical assets;
- Provide vital services.

The first steps in an emergency are to declare that there is truly an emergency, and to determine the level of the emergency which will then guide what level or type of response is required.
Emergencies are classified as follows:

- **Level 1 (Minor):** Limited scope incident that is typically managed “at-site” with local site resources. Notification and reporting would be through normal channels.

- **Level 2 (Major):** Larger in scope and more severe in actual or potential effects than a Level 1, Minor. The response may be “at-site” with local on-site resources, but restoration may require coordination with external resources. Response coordination may involve 2 or more Divisions.

- **Level 3 (Catastrophic):** Large scope and severe in actual or potential for significant casualties, widespread property damage, or total disruption of vital services at the site. Response or restoration exceeds the capability of local on-site resources. This may require coordination with, or actual command by local or state emergency management personnel.

Operational direction and control of emergency management response, and recovery activities within CATS is conducted by the on-scene Incident Commander. CATS has appointed a primary and alternate CATS Emergency Coordinator to coordinate Division emergency management activities for the CATS EOC. CATS will activate and staff their EOC at the direction of the CA Assistant Secretary.

**Interagency Coordination**

The CATS Director, or designee, coordinates CATS’ activities with regard to emergency support function responsibilities and cooperates with other CA, DSHS, State, and federal emergency management organizations. Close coordination with DIS and ISSD will be accomplished by the Technical Manager in concert with the Infrastructure Manager as part of their regular emergency leadership roles. ISSD has primary responsibility for Voice Communications systems; CATS will coordinate to help them fulfill their role regarding related activities in that area.

**Plan Components**

These components help CATS define the problem, minimize the impacts, and prepare to respond, and recover from those impacts which are not preventable. The components are:

**Planning**

Planning in an integrated emergency management approach involves hazard identification, risk assessment, and vulnerability analysis. It is also setting priorities and moving toward reducing potential impact of the worst hazards. Complete planning includes the following:

- **Identification and prioritization of vital services.**
  For CATS this has been defined as including:
  - Authorizes technical assistance to affected areas to implement communications recovery strategies and procedures to minimize loss of client data, and maintain access to client data by field social workers to ensure the safety, permanency, and well-being of children and youth under state care or supervision.
- Authorizes access to redundant systems, and the acquisition, distribution, and maintenance of IT, and voice communications equipment and systems.
- Authorizes impact expenditure decisions and reports recovery progress through the CA management structure.

**Hazard and vulnerability analysis.**
This activity involves identifying the types of hazards, likelihood of occurrence, location, impact, and strength. The Hazard and Risk Tables below identify the probability and impact of the hazards and risks most common to Washington State and CA plus a CATS self assessment. These tables were initially developed for the CA Emergency Plan and adapted for CATS.

**Hazard and Risk Vulnerability Self Assessment.**
A hazard and risk vulnerability assessment is required before worksites develop an emergency preparedness plan. The assessment identifies and rates the most significant hazards and vulnerabilities at the worksite.

The attached “Hazards Area in Washington State” document identifies specific risks for each Washington county. Each county has at least one CA facility which is supported by a team of CATS technical staff assigned to that geographic area. For each area, the tables show the likelihood and impact of each hazard.

**Hazard Probability Analysis**
The probability table below was developed for the CA Emergency Plan and is assumed to be applicable to our Lacey location 8 miles away.
- Site Location: CATS HQ, 7240 Martin Way NE, Lacey, Washington
- Developed by: Ken Kraft (for the CA Emergency Plan)
- Date: 3/25/2010

**Risk assessment**
This activity is the measure of the probability that damage to life, property, economy, and environment will occur if a hazard manifests itself. Vulnerability describes exposure to a threat. The distinction between risk and vulnerability is important. Vulnerability is a measure of what, and how much you stand to lose. The vulnerability analysis identifies and quantifies what is susceptible to damage.

Risk Mitigation
Mitigation and prevention strategies are the core functions that support all preparedness, response, and recovery activities. Mitigation is any action that reduces or eliminates long-term risk to people, property, environment, and the economy from natural and technological hazards. If mitigating a hazard is not possible, then staff must be ready to prepare, respond, and recover.

CATS’ Mitigation Activities:
CATS will develop and report a Hazard and Risk Vulnerability Self Assessment, including the table above and:

- Conduct structural and non-structural hazard analysis of facilities and worksites to identify and mitigate hazardous conditions.
- Work with building safety committees to create strategies and plans to implement mitigation activities.

CATS Preparedness Activities

F. CATS will develop operational procedures, processes, and identification and acquisition of resources to activate, manage, and assist with emergency response activities, including:

- Documentation of operational procedures for emergency response in this Plan.
- Identification and documentation of roles, responsibilities, and lines of authority for the operational procedures.
- At least annually, conduct preparedness training, education, and plan maintenance to validate emergency plans and procedures.
- Identify essential resources for implementation of our prioritized vital services, and to support health and safety, and other essential facility operations. This includes but not be limited to staff, equipment, supplies, facilities, critical business functions and operations, and materials for life and family protection safety.
- Develop a resource inventory which will be kept current.
- Establish and implement procedures to document and report emergency or disaster-related expenditures which may qualify for insurance, state, or federal reimbursement.
- Plan and develop data input fields for foster parents’ and relative caregivers’ Emergency Contact Information (See page 89 for details).
Response Activities
The CATS worksite will establish effective response strategies and actions to be taken immediately before, during, or directly after an emergency occurs. The strategies and actions are designed to save lives, minimize damage to property and the environment, and enhance the response effectiveness in disaster recovery and business resumption. This includes the CA and state ESF support activities as requested, including:

Notification and Activation:
- Process emergency calls or information.
- Activation of emergency operations procedures.
- Notification of personnel who have response duties.
- Mobilization or demobilization of services.
- Maintaining vital services.

Communications:
- Implement communications procedures, including data and voice, in support of emergency operations.
- Provide situation reports and damage assessments to the CA ICS.

Public Information:
- Activate procedures to disseminate and respond to requests for disaster information involving the agency, employees, responders, the public, and the media. Primary contact is CA Public Information Officer (PIO).

Evacuation and Sheltering in Place:
- Implement procedures to authorize, initiate, and accomplish evacuation or sheltering in place as needed to protect employees and others.

Personnel Identification and Accountability:
- Control access to the area affected by the emergency or disaster.
- Identify personnel engaged in activities at the incident.
- Account for personnel engaged in incident activities.

Recovery Activities
CATS will implement comprehensive disaster recovery, and business resumption strategies and activities to return vital systems to no less than minimum operating standards tiered commensurate with the level of emergency using the following as guidelines:

- Short-term target is 24 hours for worksite (CA Field Office, HQ, CATS HQ) data recovery (Reference: Data Risk Mitigation and Recovery, below).
- Long-term target activities are designed to return life and business operations to normal or improved levels.
- Prepare and report a business impact analysis in order to establish short and long-term recovery goals and objectives. These goals and objectives should address the following:
  - Health and safety of employees and clients.
  - Continuity of operations and services.
  - Recovery of essential records.
  - Environmental impact of disaster.
  - Mitigation goals and activities.
  - Economic impact.
  - Regulatory and contractual requirements.
  - For interagency events requiring DSHS assistance in implementing, and managing Emergency Support Function (ESF) responsibilities as part of ESF 21,
Recovery and Restoration, and/or responsibilities pertaining to the Washington State Recovery and Restoration Task Force (RRTF).

- Management of recovery goals consider the following activities:
  - Strategic planning, to include preparing budget estimates for structural, and non-structural repairs, and mitigation.
  - Management and coordination of recovery activities.
  - Coordinating fiscal operations and recovery funding.
  - Management of volunteer, contractual, mutual aid, and agency resources.
  - Implementation of mitigation goals and activities.
  - Personnel reunification and support.
  - Organization and staffing for business continuity, and the delivery of vital services.
  - Restoration and salvage.

Post-Disaster Situation Evaluation Analysis
CATS will conduct and report to CA HQ a post-disaster situation analysis and an after-action report to review and determine the effectiveness of established operating procedures, assigned tasks, and responsibilities. Lessons learned will be utilized to update this Plan.
RESPONSIBILITIES

The following outlines the CATS staff responsibilities by position. The overall concept is a top down chain of command structure. Again we note that the first leader or staff on the scene assumes the top responsibilities until officially replaced by an assigned leader.

- **CATS Director (Dawn Tatman):**
  - Demonstrate commitment, leadership, and direction of the planning objectives.
  - Provide centralized leadership for the development and implementation of emergency management through collaboration and coordination with CA Management and Emergency Response Teams.
  - Communicate Emergency Preparedness status to CA Management Team through updates during future program reviews and meetings as appropriate.
  - Provide timely decisions.
  - Member of the CA Emergency Support Team (EST).
  - Designate individuals to assume leadership functions during an emergency or event.
  - Identify additional individuals in the event the primary and alternate people are not able to report in.
  - Define and support the roles and responsibilities of those given the authority to assume the leadership positions.
  - Assure the training of these individuals on how to perform in their assigned roles. Assure that disaster-related training occurs on a regular basis and hold management staff accountable for this.
  - Learn emergency management concepts, practices, and obtain certification as indicated. Training is provided at no cost through FEMA: [http://www.training.fema.gov/EMIWeb/IS/crslist.asp](http://www.training.fema.gov/EMIWeb/IS/crslist.asp)

- **Emergency Preparedness Manager (Nick Fuchs):**
  - Prepare, publish, and distribute Emergency Management documents: develop and maintain automated and printed records for plans and reference materials.
  - Demonstrate commitment, leadership, and direction of the planning objectives.
  - Provide leadership for the development and implementation of emergency management planning and updating of plans; serve as CATS Safety Officer.
  - Provide emergency, or disaster planning guidance, and direction to the CATS Director, or designee.
  - Provide timely emergency-related decisions.
  - Monitor emergency preparedness training according to the plan and report status to the CATS director.
  - Learn emergency management concepts, practices, and obtain certification as indicated. Training is provided at no cost through FEMA: [http://www.training.fema.gov/EMIWeb/IS/crslist.asp](http://www.training.fema.gov/EMIWeb/IS/crslist.asp)

- **CATS Managers:**
  - Identify and prioritize vital services.
  - Provide commitment, leadership, and direction for development of emergency management plans.
• Develop system for resource allocation to support plan development, training/testing, response and recovery activities.
• Assure staff access to worksite and program plans.
• Participate in CATS Command Team activities.
• Provide status reports and data on event.
• Coordinate with stakeholder groups as needed.
• Assure regular training and exercising of plan.
• Learn emergency management concepts, practices, and obtain certification as indicated. Training is provided at no cost through FEMA: http://www.training.fema.gov/EMIWeb/IS/crslist.asp

• CATS Supervisory and Lead Staff:
  • Assure a safe working environment for staff and clients.
  • Contact their manager or ICS Lead during an incident regarding the status of their staff.
  • Assure operational efficiencies and protection of state assets.
  • Assure or support implementation of vital services.
  • Train staff in emergency management plan components.
  • Inform staff of current conditions during an incident.
  • Provide direction for necessary actions.
  • Implement continuity plan.
  • Coordinate activities through their supervisor/manager.
  • Learn emergency management concepts, practices, and obtain certification as indicated. Training is provided at no cost through FEMA: http://www.training.fema.gov/EMIWeb/IS/crslist.asp

• Emergency Planning and Response Team Staff (Incident Command System):
  • Plan and implement an emergency management plan to:
    • Provide a safe working environment for staff and clients.
    • Protect state assets.
    • Maintain vital service delivery.
  • Train staff in emergency management plan components.
  • Direct participation in emergency response service delivery.
  • Provide status reports and data on event.
  • Learn emergency management concepts and practices, and obtain certification as indicated. Training is provided at no cost through FEMA: http://www.training.fema.gov/EMIWeb/IS/crslist.asp

• CATS Safety Committee:
  The CATS Safety Committee will assist with development and review of the Emergency Preparedness Plan to:
  • Identify requirements for an emergency management plan.
  • Identify any needed specialized support plan that CATS should provide.
  • Assure development of required plan(s).
  • Assure accessibility of required plan(s).
  • Assure training of staff assigned to facility or program.
  • Assure any special needs of staff are included in the plan.
  • Provide status reports and data on event.
  • Assure regular training and exercising of plan.
• **All CATS Staff (includes CA Employees and onsite vendors):**
  Each individual is responsible for personal preparedness for home and family as well as
  at the worksite. Additional responsibility includes:
  - Implementation of any assigned emergency planning and implementation role; or
    participation in emergency response service delivery.
  - Implement or support implementation of vital services.
  - Maintain operational efficiencies and protection of state assets.
  - Assist in the maintenance of a safe working environment.
  - Inform supervisor of their status and ability to work.
  - Inform supervisor of their location if not able to report in.
  - Be available to support other units or activities.
  - Maintain communication of their status with supervisor and team leads.

• **All Administration Groups:**
  - Implementation of any assigned emergency planning and implementation role; or
    participation in emergency response service delivery.
  - Demonstrate commitment, leadership, and direction of the planning objectives.
  - Responsible for the review and feedback on information and materials provided.
  - Responsible for revision, new development, and updating of their facility,
    worksite, or program Emergency Management Plans.
  - Responsible for the implementation of their facilities/worksites or programs
    emergency plans as needed.
  - Assist in the implementation of the CA Emergency Preparedness, Response, and
    Recovery Plan as needed.

CATS Emergency Plan Maintenance
- **Training:** Training includes assuring each CATS staff member reviews the plan, attends a
  meeting to go over the plan, and attends specific training activities. Ongoing
  communications and training is necessary and will utilize a variety of media including:
  - Posters
  - Email
  - Meetings
  - Mock incidents (i.e. fire and earthquake drills)
  - Distribution of additional informational materials
  - Formal training sessions.

- **Testing/Practice:** Testing of plans should be an ongoing priority. The more routine our
  response activities become, the better we will be able to respond when a disaster
  occurs. Plans need to be trained and tested twice annually.
- **Revise/Update Plan:** The CATS plan will be revised and updated as conditions change,
  and/or following any training, testing, exercise, or actual event(s) and lessons learned.
- **Policy Development:** Any changes to policy will follow routine procedure for
  development, review, and approval and incorporation into the CATS plan as required.
- **Emergency Management Documents:** CATS will develop and maintain automated records
  management for the CATS Emergency Response Plan and all reference materials.
Data Risk Mitigation and Recovery Activities

The major **statewide** mission of CATS for CA’s emergency **preparedness** is to assure the backup, retention, protection, and recovery processes for FamLink and CA Server client-related and business data and related software. These activities are described below:

**FamLink, Washington’s State Automated Child Welfare System (SACWIS), Backup and Recovery Plan**

FamLink is the primary data system used by CA for all client and provider information. FamLink is a web-based, SQL database system residing on a clustered server environment housed in Office Building 2 (OB-2) operated by the Department of Information Services (DIS).

The detailed FamLink Backup and Disaster Recovery Plan, dtd 4/30/2009, is currently available via this link.

This document provides the Disaster Recovery Plan for the FamLink application and documents the activities and processes necessary to backup and recover the application and data. It also provides information covering the roles and responsibilities for the CA, ISSD and DIS management and support staff and instructions on how to declare a disaster and invoke the recovery plan when confronted with a major emergency event.

This plan outlines the actions to be taken to complete the recovery of the FamLink hardware and software components following a major emergency event such as earthquakes, fires, floods, human error, major virus attacks or other causes that could result in the application becoming unavailable. The plan also establishes the basis for testing and personnel training.
CA File Server Backup and Recovery Plan

The backup activities described below are in full operation, providing 100 percent redundancy for CA’s official records and data on CA’s file servers throughout the state. CATS retains 7 years of data backup tapes in fireproof storage.

CA File Server Backup

Nightly backup:
- All but 4 of the smallest CA office file servers are backed up nightly on a local tape backup device. These backups are “differential”, adding the day’s newly-created data and changes to the prior backup. Tapes are stored in fireproof safes.
- All office servers are backed up to a disk storage device (“Power Vault”) in OB-2.

Weekly backup:
- All but 4 of the smallest CA office file servers are backed up weekly on a local tape backup device. These are full backups of all data. Tapes are stored in fireproof safes.

Monthly backup:
- All but 4 of the smallest CA office file servers are backed up monthly on a local tape backup device. These are full backups of all data. Tapes are stored in fireproof safes.

Annual backup:
- Each office retains the year-end office backup as an annual tape. These are retained for 7 years per protocol for public disclosure. As of June, 2007 we have 3 years of annual tapes retained.
- The year-end OB-2 Power Vault all-CA backup disk is also be backed up on tape. This annual backup is retained for 7 years in the Iron Mountain, Inc. vault. Year-end 2007 will be the first such annual tape.

CA File Server Data Recovery

- Office-level recovery: An entire backup or any part of a backup can be loaded on any office file server or another server within 24 hours for availability to office staff. This can be done from the local nightly, weekly, or monthly backup tape. In the event of loss of those tapes to fire, flood, destruction of the building, the backup is available from the OB 2 disk storage (Power Vault) device.
- Multiple-office recovery: In the event that tapes are unavailable due to fire, flood, destruction of the building, the backup is available from the OB 2 disk storage (Power Vault) device.
- Disaster recovery: In the event that OB-2 file servers and storage devices are completely destroyed or unrecoverable for a period of time, CATS will have backup tapes stored off site in an “environmentally optimized” vault by Iron Mountain, Inc. (reference http://www.ironmountain.com/dataprotection/). The service of Iron Mountain is to “locate the tapes you require, transport them securely to the recovery site of your choice, and work alongside your team to restore your data.”
- Catastrophic disaster recovery: CATS has established a “mirror site” for full backup of data in Spokane, WA. This will essentially replicate the “Power Vault” disk storage backup taking place nightly at OB-2. This site will be located in Spokane to mitigate a disaster where OB-2 is obliterated, such as in the event of a major earthquake. CA data can be accessed or replicated to other CA locations, including a new server in OB-2, from this storage site if needed.
Continuity of Operations: Data Access Response and Recovery

There are many scenarios and levels of emergencies which can impact CA staff ability to access FamLink and CA business data at a single office, multiple offices, region-wide or even larger geographic areas, such as Western Washington. For each of these scenarios, some fundamental response and recovery activities apply. As the scale of the emergency increases, additional personnel and resources will be required to respond and recover. However, the basic CATS response and recovery activities regarding data and communication systems remain the same:

- Determine and report the cause, extent, and likely duration of the disruption.
- Identify CATS on-site and other personnel available for the response and recovery actions (see Shared Emergency Administration (SEA) Account Policy, below).
- Identify the current availability and capacity of data and communication systems and equipment to provide the needed levels of service.
- Coordinate closely with local and HQ CA leadership.
- Determine what individuals require access to critical data based on this prior agreement from CA Management: "CATS and/or Office Support group will proceed to apply the fixes to equipment according to the priority identified by each office or as directed by their immediate supervisors. In the event that a priority list is not available from the office, the default priority will be as follows:
  - Intake
  - Social Workers
  - Clerical
  - Supervisors
  - Management"
- Determine what resources they need at a minimum to gain that access (power, laptops, CITRIX access, Wi Fi, cell phones, etc.)
- Locate the needed resources and/or determine alternative locations for access.
- Provide CATS technical assistance to set up and test equipment and train the user or assure the necessary skills for use.
- Provide follow up help resources for the user.

The following is list of likely scenarios and the planned response to assure continuity of operations regarding FamLink and CA data access:

- Building/office Response and Recovery—It is not an unusual occurrence for a single office to experience an event which “takes out” data access, either to the local server or external lines to FamLink or OB-2 data files. Some of the more common scenarios include:
  - A spreading computer virus disrupts a server and an office of desktop devices.
  - A vehicle accident or wind takes out power and/or data lines.
  - Fire, flooding, bomb threats or other emergency makes a building inaccessible.

The business of CA must continue, with computer and phone service. Here are some of the contingency plans for single building response and recovery:

  - Approximately 50% of social workers have laptops which may be used external to the worksite.
  - Some laptops have Verizon access cards and software installed.
Social workers may have CITRIX (DSHS Virtual Workplace) by request of their management, allowing them to access FamLink and CA files and email from a home computer or their laptops at any location with internet access.

For those without laptops or home computers, laptops can be made available from “check-out” laptops or extras around a region or state.

Additional laptops may be rented or leased as needed, and combined with CITRIX access for the user.

Work locations can include home, other CA offices (conference rooms, empty cubes, etc.) and the possibility of outside locations with Wi-Fi “hot spots”.

Workers’ cell devices (phones, hand-held multiple use data devices) should continue to be functional in this type of incident.

**Multiple Worksite Response and Recovery**—Major events such as a large electrical grid outage, earthquake, or terrorist strike could potentially take out multiple worksites, including large and medium-sized offices. The most vulnerable areas are where CA worksites are in relatively close proximity, i.e. Seattle, Olympia, and Snohomish County. Yakima also has 2 worksites in the city. Such an event would stretch resources and may make workers’ homes and other nearby locations also unusable for computer work. Multiple CA servers, external data transmission lines, phone connections, cell towers may all be impacted and out of service for indeterminable and varying amounts of time. Here are some contingency plans:

- Workers may need to go to other cities and/or to other CA Worksites to utilize computers and phones for work, depending on the extent of the local damage or threat. As above, they could utilize laptops in CA conference rooms or Wi-Fi hot spots in various locations with CITRIX access.
- An incident of this nature may require an immediate plan (based on number of displaced workers) for workers to “double-up”, sharing workstations while they match up schedules between field work and data work.
- Disrupted local (office) file server information may need to be loaded from backup tapes to another office file server for use by displaced workers. The necessity for this would be coordinated with the leadership of the displaced office workers (RA, AA, or Supervisors as appropriate or available).

**Regional/multi-regional Disruption Response and Recovery**—In the event of a catastrophic earthquake or massive terrorist attack (as with nuclear or widespread biological weapons), a large area of Washington State could become disrupted. In this situation the following steps are prioritized in this order:

1. Immediate preservation and protection of life and personal survival becomes the first priority.
2. Identification, location, and activation of available leadership and field workers are next.
3. Assessment of the overall safety and health of worksites.
4. Activation of response and recovery emergency plans.
5. Field operations to locate and protect the children and families in our care.
6. Infrastructure recovery operations for communications and data services will become systematic, first with the identification of available operating capacity, then the rebuilding of infrastructure.

Contingency plans include:

- As data and communication transmission capacity recovers, CA servers can be fixed or replaced, then downloaded with the most recent data from off-site storage (Iron Mountain, Inc.).
• DIS is responsible for the same process with FamLink systems and the Internet delivery for the State.
• ISSD is responsible for recovery operations for CITRIX Virtual Workplace.
• After those systems are in place, access through any available workstations (laptops or desktops) with internet access is feasible.

Looking to the future for an increased ability to respond to major disruptions, investment in some additional contingencies should be considered, including:

• Assure that all social work field staff and their leadership have laptops with CITRIX access, Verizon cards, Wi-Fi capability.
• Provide access to extra batteries in a variety of locations.
• Acquire and store additional laptops with Verizon cards and Wi-Fi capability and extra batteries at regional sites for use anywhere in the state when local machines are disabled or destroyed.

Additional standing contingency options which apply to all automation systems supported by the Children’s Administration Technical Services (CATS) Division and all CATS staff include:

• **Shared Emergency Administration (SEA) Account Policy** (reference IT Security Policy Manual 15229)—This account is to give non-technical staff, office site assistants, or other designated office workers full administrative privileges to Children’s Administration desktop computers at the local administrative level in response to an event that requires software, patches, or other solutions be applied to each computer locally and which cannot be distributed electronically.

• **Expedited Patch Application Procedure** (reference IT Security Policy Manual 15227)—The purpose of this standard is to outline the procedures needed to expedite the installation of patches that are critical in nature on a network-wide basis.

• **Patch Notification Response Procedures** (reference IT Security Policy Manual 15226)—The purpose of this standard is to outline the necessary resources, steps and methodology needed to successfully classify and respond to virus definition file updates and software patch upgrade notifications from vendors.
## CATS Emergency Response Assignments

The following table outlines the emergency response assignments for CATS key staff:

<table>
<thead>
<tr>
<th>#</th>
<th>Position</th>
<th>Brief Description of Responsibilities</th>
<th>Primary</th>
<th>Alternate</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>COMMAND STAFF POSITIONS</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
|    | Incident Commander                      | • Activate the Incident Action Plan (IAP).  
• Monitor potential threats.  
• Support on-scene response operations.  
• Receive, compile, and display data on the emergency situation, resource status and commitments as a basis for planning.  
• Analyze current problems, anticipate potential problems and formulate options for solving them.  
• Coordinate with CA HQ & local agencies.  
• Develop and disseminate worksite/facility warnings and other emergency staff information utilizing the CATS Communications Officer.  
• Decide and implement site evacuation activities.  
• Coordinate damage assessment activities and assess the status of staff health and safety, worksite operations, and CA tech operations.  
• Request assistance from local agencies, volunteer organizations, and businesses or from the state as may be required.  
• Implement incident cost tracking and analysis.                                                  | Dawn Tatman, Director | 1\(^{st}\) Alternate  
Nick Fuchs, Deputy Director  
2\(^{nd}\) Alternate: Marty Belfield, Prod/Dev Manager  
3\(^{rd}\) Alternate: Narvie Seals, Infra. Manager |
|    | Comprehens  
ive Emergency Management Plan Coordinator | • Program Manager for CATS Emergency Management.  
• Respond and function as CEMP Coordinator in support of the worksite/facility Incident Commander.  
• Set up and administer the Emergency Operations Center if needed.  
• Coordinate and implement site physical, personnel, and document and data security measures.     | Nick Fuchs, Deputy Director | Marty Belfield, Prod/Dev Manager |

<td></td>
</tr>
</tbody>
</table>
## INFRASTRUCTURE SUPPORT SECTION POSITIONS

| 8. Infrastructu re Support Manager | • Manage Infrastructure Support and Recovery activities in coordination with the Technical Manager.  
• Participate in developing and implementing the Incident Action Plan (IAP).  
• Assess the situation and report to the worksite Incident Commander  
• Command any required direct response.  
• Coordinate worksite-based responses with external agencies.  
• Request or release resources through the worksite Incident Commander.  
• Assess the condition of the worksite’s voice and data infrastructure and the centralized computing services.  
• Maintain worksite computer information systems, including; assessing system status; initiating emergency repair and recovery; and providing information to support emergency response and recovery operations, as requested by the worksite Incident Commander.  
• Provide technical support for the worksite telephone and communication systems used in the emergency response; direct restoration of communication services; establish alternate means of communication when necessary; and provide communications to support EOC operations.  
• Activate the worksite Emergency Hotline. | Narvie Seals | Larry Turner |
Introduction

Purpose
The purpose of this plan is to provide detailed instructions and reference information for all Children’s Administration Technology Services (CATS) employees and contractors in case of emergency. This plan supports the directives of the “Interim DSHS Emergency Quick Reference Guide (April 2005)”—http://www.dcs.dshs.wa.gov/dcs/safety/quickref.pdf, and DSHS Administrative Policy No. 18.32—http://asd.dshs.wa.gov/RPAU/documents/Admin-Policy/18-32.doc

Description
Although the general focus of this Plan is on emergencies which may occur at the CATS HQ building in Lacey, the instructions for emergency management, communications, and responses apply to all CATS staff.

The plan includes:
- Definitions of emergency-related terms.
- Roles and responsibilities.
- A detailed Communication Plan.
- Response options for a variety of emergency conditions.
- Specific IT and Service Desk instructions.
- The Emergency Checklist and Report.
- Phone lists.
- List of emergency supplies to maintain at the office and recommended for home.
- Map of CATS HQ with highlighted locations of Fire Extinguishers, First Aid Kits, Exits, and breaker boxes.

Instructions to CATS Staff

All CATS employees and contractors are expected to:
- Review this plan and the DSHS references linked above.
- Keep 2 up-to-date hard copies of this plan readily available—one at their office and one at home.
- Keep all CATS-provided emergency supplies readily available under work desks.

Definitions
The following definitions apply to the CATS Emergency Plan:
- **Emergency**: An emergency is defined by DSHS...as “any physical event that interferes with the Department’s ability to conduct critical transactions or provide time critical service”. A range of emergencies might include but is not limited to
  - Loss of facilities or access to facilities.
  - Loss of single areas within a building or on a campus.
  - Loss of computer access to data.
  - Loss of staff.
  - Added for this CATS Plan: The inability to fully provide critical services from the usual location due to loss of critical services received and/or the inability to inhabit the CATS building for any reason. Also when an emergency prediction (such as weather, volcano) or actual event reasonably implies an impending threat to the safety or well being of CATS staff.
- **Critical Services provided**: Network connections, Service Desk phone and email.
- **Critical Services received**: Power, network connections, heat, water, phone, building security, building access, fire alarm, and sanitation.
• **Incident Manager (IM):** The Incident Manager for an emergency is typically the highest level/senior CATS Manager/Supervisor available on site, or the Manager/Supervisor appointed by the Director or the Assistant Secretary to coordinate and report emergency activities (see default order, below). The IM is responsible for the Emergency Checklist for the event.

• **Notification:** Messages sent to coworkers, other CA staff, and/or stakeholders describing the problem and emergency process, or the end of the emergency and resumption of normal services.

• **Uninhabitable workspace:** When a workspace or entire building can no longer support the worker(s) in a reasonably safe and comfortable manner due to reduced, or lack of, critical services or an impending threat.

**To support an order of building evacuation, generally CATS workspace becomes uninhabitable when:**

- Lighting is no longer available or adequate for normal work.
- Indoor temperature cannot be sustained between 65 and 80 degrees Fahrenheit.
- Water supply is unavailable for longer than 3 hours.
- Networking availability is reduced to where staff may no longer perform meaningful work at their workstations.
- Sanitation or air quality conditions can reasonably be considered a health hazard.

**Communications**

An emergency requires communications between CATS and CA leadership, CATS staff, CA staff, and stakeholders. The Incident Manager (IM) is responsible for assuring communication per this protocol. The IM may assign emergency duties to any available staff as needed.

**Depending on who is available, the order for assuming the role of Incident Manager generally will be:**

1. Deputy Director
2. Development Manager
3. Communications Manager
4. Infrastructure Manager
5. Director

**Minimum communications will include:**

- Time the emergency began or was discovered.
- Nature of the emergency and anticipated impact to staff/stakeholders.
- Plan to mediate the emergency for critical services.
- Anticipated duration of the emergency, if known.
- Plan to communicate during the emergency and when the emergency is over (see Emergency Message (below)).
- Final message when the emergency is over, detailing any continuing impacts or recovery activities.

**Communications will be delivered by these means in this order:**

1. Email, if available, for sending and receiving initial and follow up communications. **Phone follow up is required for key staff.**
2. Phone, if available, for follow up to key staff and/or if email is not available (see Phone Tree, below).
3. Voice/in person follow up within the CATS office (phone intercom may be utilized if available); also to key staff if no other communication is available (may require travel to OB-2 for notification in some circumstances).
Notifications will be delivered in this order:
The first CATS staff initially becoming aware of the emergency or impending threat will attempt to make contact in person or by phone to report in this order based on the nature of the event and availability of staff:

1. **911 only if** it is a medical or law enforcement emergency, followed by ...
2. **Kaufman Bros. (Wk 491-5230 Cell 789-9070)** if it is a building problem (power/water/heat/broken window, etc.).
3. IT staff per attached protocol if any portion of the network is down. (Ref page 11)
4. Direct Supervisor, for all other emergencies, or
5. Direct Manager, or
6. CATS Deputy Director, or
7. CATS Director, or
8. Any other available CATS Manager, or
9. CA Assistant Secretary, if available, or CA Administrative Assistant.

**Emergency Checklist and Report**

An Emergency Checklist and Report template (attached) will be published listing the items to be considered under a variety of emergency conditions. The Incident Manager (IM) appointed for that emergency event will use this template to track activities performed during and following the event. A **hardcopy** of the checklist will be utilized by the IM to monitor and record the activities accomplished.

**At a minimum, the Checklist and Report record will include:**
- Name of the IM making the report.
- Beginning date/time of event.
- End date/time of event.
- Nature of event (brief description).
- Notifications list of who was contacted and type of notification (email, phone, in person).
- Problem/issues and resolution.
- Resources utilized with contact name/phone/email.
- Attachments, including:
  - Hardcopies of emails sent for all notifications.
  - Lessons learned.

**Phone Tree**

Situations may occur where it is necessary to contact staff to prevent them from coming in to work when the building or their workspace is uninhabitable. A phone tree will be established to facilitate this communication. **Only the Incident Manager of the event may choose to “activate” the phone tree.** Each Manager, Supervisor, and Lead will have a hardcopy Phone Tree list available only of the numbers for which they are responsible.

The IM will prepare a clear message to be consistently given to each person. The message will include, at a minimum:
- Time the emergency began.
- Nature of the emergency and impact to staff/stakeholders.
- Plan to mediate the emergency for critical services.
- Anticipated duration of the emergency, if known.
- Method(s) of communication during the emergency and when the emergency is over.
- When to begin calling for the current status message (see below).
- Phone number to call to receive current status message.

The expectation is that whenever the Phone Tree is activated, Managers, Supervisors, and Leads will **perform with due diligence** to accomplish the contacts with every impacted staff member in a
timely manner. The phone tree will utilize home phones and/or work or private cell phones as needed to make contact. The order of calling follows “chain of command” principles:

1. Each Manager with an impacted “unit” contacts their “next in charge” (Supervisors/Leads).
2. Supervisors call their Leads.
3. Lead workers call the staff in their “units”.
4. Supervisors/Leads report back to their Managers (phone messages are adequate) noting who was not contacted.

After receiving the Phone Tree call, these actions are expected for staff:

- Call the Phone Message as instructed in the initial communication and in the phone message.
- Perform any specific emergency or other work-related duties as assigned through the IM or Manager/Supervisor.
- Return to duty stations as instructed.

**Phone Message Contact**

A phone message for CATS staff will be placed on a designated phone, depending on the location and nature of the emergency. This message will be used to notify CATS staff of current status of the emergency and when they can return to work. The IM or designee will be responsible for updating this message when there are significant changes in the status of the emergency and as soon as the workspace becomes inhabitable. The Phone Tree or email message to staff will give the phone number to call and the date/time to begin checking the message.

**Emergency message on the designated phone:**

*** Note: The person setting this message must have the security code for that voicemail box.

The IM or designee will call the phone number for the designated message phone and record at a minimum the following:

- “This message was last updated on (date/time).”
- Statement of the emergency and current status, including expected duration, and impacts.
- “Instructions to CATS staff are: (list instructions).”
- “This message will be updated by (date/time). Please call shortly after that time to receive updated information and instructions.”

**The steps for leaving this message from a remote phone are:**

- Dial 412-9999
- After voicemail answers, dial 9 and the mailbox number (this will normally be the mailbox of the person calling or another designated phone, such as Service Desk number, where the security code is known).
- You will be asked for the security code. Key it in.
- Listen for prompts to receive messages, create new message, etc.
- Record a new message and Exit.

**Publications**

The following emergency plan publications will be produced and distributed:

- **Two** (Home/Office) Emergency Plan folders each will be prepared for the CATS Director, Managers, and Supervisors. Each folder will be the color red and will include at a minimum:
  - The current CATS Emergency Plan.
  - Two copies of the Emergency Checklist and Report template.
  - Phone Tree numbers appropriate for the level of staff using these guidelines:
- Director, Managers, Administrative Assistant will have complete CATS phone list.
- Supervisors will have numbers for their Manager, the Deputy Director, and all subordinate staff in their work area.
- Leads will have their Supervisor, Manager, and all staff in their unit.
- The Director’s Administrative Assistant will have a complete folder at home and an office folder located to be easily available to any staff in the office. The general office folder will not include Phone Tree numbers.
- Each Lead will receive two folders with Emergency Plan and appropriate phone tree numbers for their office and home.
- Each staff will receive two hard copies of the Emergency Plan in a red folder and instructions to keep one at home or car and one at the office for reference.

**Emergency Response by Event Type**

**Power Outage**
A partial or complete power outage in the CATS building has immediate workload impacts. The response described below is the minimum expected of the appointed Incident Manager.

**Unexpected or planned outage during regular work hours, actions to be taken:**
- IM contacts Puget Sound Energy at **888-225-5773** for notification and estimate of outage time.
- IM will contact Custom Security at **360-491-6320** to notify them of the power outage if the outage is expected to extend beyond normal work-hours. Request service call to reconfigure PC and security system the next day or when power returns.
- IM makes go/no go decision to vacate the building based on established criteria.
- Upon building evacuation the IM will record the staff message per instructions.
- Service Desk relocated to another building.
  - First choice is OB2
  - Second choice is Tumwater
  - Third choice is Tacoma.
- All staff message must be sent by Trainer or System Support Specialist staff in another building, notifying staff how to contact Service Desk.
- Manager will shut off lights.
- Managers will have building keys if card-key system stops working.

**Unexpected outage after hours or on weekends and holidays; actions to be taken:**
- The Manager notified by Custom Security (or by some other means) that there is a power failure will contact Sound Energy at **888-225-5773** for notification and to determine estimated outage length.
- If outage will extend to next business day, the Manager or designee will initiate the Phone Tree at a reasonable time.
- Manager will update the phone message.
- Manager and/or designee will open office at 6 a.m. and continue as IM per protocol.
- If there is no notice prior to start of business day, the first staff to the office will notify their Supervisor or Manager who will follow protocols to initiate the Phone Tree.
- Designated IM will follow Emergency Plan protocol.

**When power is restored, the following actions will be taken by the IM:**
- IM will update phone message.
- Reset thermostat time.
- Assure local servers are rebooted and tested.
- Assess building status, including:
  - Make sure all lights are working.
  - Copier is running.
  - Phones are working.
If building security system is not working, these actions will be taken by the IM:
Contact Custom Security at 360-491-6320 to report status and request a service call. Managers and network staff must have building keys for entry without key-card if security system backup battery fails. Follow instructions below to disable the beeping security system following backup battery failure. Reconfiguring the system with the PC will require a service call to Custom Security to fix.

**Water Outage**

*When water service is interrupted, these actions will be taken:*
- Contact City of Olympia Utilities to give notification and receive estimated time for outage at:
  - During business hours—753-8468; After hours—753-8333
- Notify Kaufman (Bldg owner)—Wk 491-5230 Cell 789-9070
- If there is prior notice, fill up 5 gallon buckets from janitor’s closet and put in restrooms for toilet flushing.
- Send status and instructions email to staff.

*When water is restored, these actions should be taken by the IM or designee:*
- Run water in all systems to clean them as well as report any problems. Problems with blocked valves, leakages, and low water pressure may have resulted from the incident.
- Report problems to Kaufman Bros.—491-5230

**Temperature Control**

*When temperature control (heat / air conditioning) is unavailable:*
- Interruption of temperature control may result in conditions which lead to building evacuation.
- The IM will take these steps:
  - Notify Kaufman Brothers—360-491-5230.
  - Assess comfort level and expected duration.
  - Report to the CATS management team to decide whether to evacuate the building.
  - Notify CATS staff of the status through e-mail or other means.
  - If the building is evacuated, follow protocols.

*When temperature control is restored:*
- IM will check and reprogram thermostats as necessary.
- IM will notify staff per protocols

**Service Desk Disaster Preparedness and Recovery**

A variety of conditions may impact the ability of the Service Desk (SD) to operate normally, including partial or full power outage, network outage, phone service outage and email problems. Evacuation of the building is the extreme case. Each event must be evaluated based on type of problem and expected duration. Whether service is interrupted temporarily (3 hours or less) or longer term, as in the case of building evacuation, communication is the key. Here are the basic guidelines for various conditions:

- If SD work cannot reliably be performed in the CATS building, the SD will be relocated according to this order of space and operations availability:
  1. OB-2, 3rd or 4th floor.
  2. Tumwater training room.
  3. Tacoma training room.
If the building is evacuated, the regular SD phone number (360-412-3952) may be designated the number to call, if operating, for the updated message used in the Phone Tree process.

**Communication with IT and Users will occur using these methods, depending on the event conditions:**

- SD contacts local ITS using landline phones or cell phones to report status, plans, and estimated timeframe if applicable.
- SD requests local ITS assistance to respond to local issues.
- SD provides ITS with temporary landline phone number to reach SD if needed.
- SD contacts CA Users via email from offsite contact (Incident Manager, supervisor, or selected local ITS) to report status, plans, and estimated timeframe if applicable. The message provides users a temporary phone number to reach SD.
- SD receives and triages phone calls and messages, responds to user’s needs and messages from field until normal conditions are restored.
- When power is restored SD or IM will communicate with users via email to for notification.
- SD will contact users whose problems were not addressed during interruption of service.
**IT Emergency Call List**

The order listed should always be followed. The first person to be reached will be in charge of alerting the remaining members of this list as needed.

**Call order for After Hours Emergency:**

Facilities/Worksite
Emergency Event Check List
(Immediately following an event)

☐ Establish Command Post
  □ Make sure everyone knows there is an emergency, by phone, radio, page, and e-mail.
  □ Assign recorder(s) (whiteboard(s), flip chart(s), tape recorder(s).
  □ Assign someone to manage phones.
  □ Establish check off list and ensure all being accomplished.
  □ Make sure someone is recording each event and time.

☐ Activate EPRT
  □ Muster report via Team Leader.
  □ Get and post damage assessment.
  □ Team to perform RICRA (Rescue, Investigate, Contain, Report, and Assist).

☐ Communicate
  □ Announcement for building occupants. Ask IC for input if time permits.
  □ Report to senior manager and/or IC.
  □ Activate communication procedures with region and headquarters.
  □ Activate staff emergency notification contact list and local emergency services list.

☐ Manage Incident
  □ Prioritize damage reports and assign resources.
  □ Initiate Incident Action Plan(s) (IAP).
  □ Follow up announcement.
  □ Implement MOUs/MAAs if additional resources required.
  □ Determine level of emergency and plan accordingly.

☐ Return to Normal Operations
  □ Make announcement, tell personnel what to expect.
  □ Sweep areas.
  □ Get muster report from Team Leader. Make sure everyone is accounted for,
  □ Do post operation debrief.

</table>
**Risk Threshold** (When can harm start to occur if this vital service is disrupted?):
- Intake—4 hours;
- Investigations—three business days;
- Court Services—15-30 days.

**What is the Likelihood of Disruption?** (What’s the potential for failure of resources that support this vital service?)

HIGH potential for occasional, short-term disruption limited to single worksites, especially due to electrical power, data line, or local server failure due to a variety of potential causes. More extreme hazards such as fire, flood, earthquake, etc. (see assessment) are only of low to moderate likelihood.

**COMPONENTS WITH THE GREATEST VITAL SERVICE DISRUPTION RISK BASED ON LIKELIHOOD OF OCCURANCE**

<table>
<thead>
<tr>
<th>Components with Significant Risk</th>

</table>
**Work at Home** What, if any, “events” (processes or sub-processes) can be performed from home?

With availability of a computer, Internet access, and utilization of CITRIX Virtual Workplace or VPN, all FamLink activities may be performed in locations away from the CA worksite, including at home.

**Summary**

The most common potential hazard is worksite power outage followed by local data line or server outage. More extreme or widespread hazards are less probable.

Key personnel are the local field System Support ITS technicians, supervisors, and infrastructure support experts with management oversight.

A few outside agencies may have less critical and less immediate impact than CA social work. The most critical impact is on the 24/7 Intake operations if there is general FamLink outage for whatever reason of any duration of a few hours or more. Other CA social work documentation and tracking, payment authorizations, funding processes, facility licensing, health & education tracking, and adoption support functions are also impacted by such outage of longer duration.

Mitigations include local repairs by CATS personnel, utilizing alternative worksites, or working from other remote location such as home with access to the Internet and CITRIX Virtual Workplace or VPN.

All CATS staff, especially the essential field System Support staff must be apprised of and trained in the CATS Emergency Response procedures. They must be ready to respond to all levels of emergencies from individual worksite disruptions to multiple worksite or regional disruptions, including disasters involving CATS HQ, CA HQ, OB-2 (DIS and ISSD systems).

**Definitions**

**Vital Services:**

The vital services provided by CATS in an emergency are:

- Implement recovery strategies and procedures to minimize loss of client data (FamLink), and maintain access to client data by field social workers to ensure the safety, permanency, and well-being of children and youth under state care or supervision.
- Authorize access to redundant systems, and the acquisition, distribution, and maintenance of IT, and voice communications equipment and systems.

**Resources:**

- The Washington State Department of Information Services (DIS) and DSHS Information Systems Services Division (ISSD) are the key resources to implement recovery of FamLink data in the event of data loss as described in the CATS Emergency Plan. They also facilitate recovery of power, data, and phone lines through the appropriate service providers in the impacted area(s).
• Local CATS System Support Specialists, their supervisors and managers in concert with the CATS Infrastructure Support Team are the key personnel to assess damage and implement hardware and software recovery for any worksite or statewide.

• Redundancy of hardware, especially servers is a key mitigation. For general, individual worksite-level impacts, the redundancy is available. Larger scale disruptions to multiple worksites or region-wide will stretch the current resources.

• Availability of CITRIX Virtual Workplace and VPN accounts, along with Internet availability is a primary mitigation for social work staff and their supervisors.

• Availability of reliable transportation, fuel, and accessible roadways will always be an important consideration in major disasters, including wildfires, chemical spills, major earthquake or even terrorist attacks.
DSHS Notification Requirements

LOCAL site or program complete Initial Report of Emergency

LOCAL site or program determines emergency level, command level, and immediate notification requirements

LEVEL 1 MINOR
NO COMMAND
Incident managed "at-site" with regular administrative processes.

LEVEL 2 MAJOR
LOCAL COMMAND
Incident managed "at-site" with local site or program command team.

LEVEL 3 CATASTROPHIC
AGENCY COMMAND
Incident managed by DSHS Regional or Headquarters command team (Emergency Support Team)
STATE LEVEL COMMAND
Incident managed by command team external to DSHS, (another agency, Emergency Management Division, fire or police jurisdiction)

REGULAR NOTIFICATION
By next business day, fax or email copy of Initial Report of Emergency to Emergency Management Coordinator

IMMEDIATE NOTIFICATION
Call immediately the Emergency Management 24-hr call center (see page 2 for instructions)
### G. Emergency Planning and Response Team (EPRT)

**EMERGENCY LEVEL ASSESSMENT:** Check the most relevant description of impact (including potential impact) in the various categories. The Level with the most impact areas checked is the designated emergency level. Exception: Level 3 (Catastrophic) must have at least two of the bolded descriptions, marked with **, checked to be designated as Level 3.

<td></td>
</tr>
</tbody>
</table>
COMMAND NEEDS ASSESSMENT: Check the most relevant description of command need based on the indications.

<table>
<thead>
<tr>
<th>NO COMMAND</th>
<th>LOCAL COMMAND</th>
<th>AGENCY COMMAND</th>
<th>STATE-LEVEL COMMAND</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐ Incident can be managed “at-site” with regular administrative processes.</td>
<td>☐ Incident can be managed “at-site” with local site or program Command Team.</td>
<td>☐ Incident requires command or coordination by DSHS Regional or Headquarters Emergency Support Team (EST).</td>
<td>☐ Incident requires command by emergency command team external to DSHS. (other agencies, Emergency Management Division, feds).</td>
</tr>
</tbody>
</table>

Indications:
- Level 1 (Minor) with limited impact and
- Response/restoration can be managed within the chain of command.

Indications:
- Level 1 (Minor) or Level 2 (Major) and
- Response/restoration requires coordination by multiple departments or supervisors within the site or program.

Indications:
- Level 2 (Major) and
- Local Command Team has been disabled or
- Significant resources required (capital funding, specialized equipment, staff deployed from other sites) or
- Multi-Administration impact that requires decision of sending staff home (i.e., co-located facility)

EMERGENCY MANAGEMENT NOTIFICATION REQUIREMENTS: Use the matrix below to identify to whom to report the emergency incident, how to report, and when to report.

NOTE: All policies and procedures that identify incident reporting requirements or other administrative reporting must continue to be followed. The emergency management reporting requirements below are in addition to other existing reporting procedures.

EMERGENCY MANAGEMENT NOTIFICATION MATRIX

Check incident emergency Level and Command need. Notification requirement will be designated as Regular or Immediate and their requirements are defined below the matrix.

GLOSSARY OF TERMS

AG: Attorney General (federal and state)

Agency: A division of government with a specific function offering a particular kind of assistance. In ICS, agencies are defined either as jurisdictional (having statutory responsibility for incident management) or as assisting or cooperating (providing resources or other assistance).

Agency Representative: A person assigned by a primary, assisting, or cooperating Federal, State, local, or tribal government agency or private entity that has been delegated authority to make decisions affecting that agency’s or organization’s participation in incident management activities following appropriate consultation with the leadership of that agency.

All-Hazard: Covering all possible hazards whether natural, accidental, negligent, or intentional.

All-Hazard Preparedness: Preparedness for domestic terrorist attacks, major disasters, and other emergencies.

Alternate Emergency Operations Center (AEOC): An established location to evacuate to in the event that the primary EOC is not available due to natural or manmade causes.

American Red Cross (ARC): A volunteer organization which works closely with government at all levels in planning for and providing assistance to disaster victims. The ARC operates under a Congressional charter. All of its disaster assistance is based on verified disaster-caused need, and is an outright grant from donations from the American people.

Authority: the power to control, judge or prohibit the actions of others based on statutory, regulatory, or delegated right.

Area Command (Unified Area Command): An organization established (1) to oversee the management of multiple incidents that are each being handled by and ICS organization or (2) to oversee the management of large or multiple incidents to which several Incident Management Teams have been assigned. Area Command has the responsibility to set overall strategy and priorities, allocate critical resources according to priorities, ensure that incidents are properly managed, and ensure that objectives are met and strategies followed. Area Command becomes Unified Area Command when incidents are multi-jurisdictional. Area Command may be established at an emergency operations center facility or at some location other than an incident command post.

Assessment: The evaluation and interpretation of measurements and other information to provide a basis for decision-making.

Assignments: Tasks given to resources to perform within a given operational period that are based on operational objectives defined in the IAP.

Assisting Agency: An agency, or organization, that provides personnel services, or other resources, to an agency with direct responsibility for incident management. See also Supporting Agency.

Available Resources: Resources assigned to an incident, checked in, and available for a mission assignment, normally located in Staging Area.

Bioterrorism (BT): The use of a biological agent in a terrorist incident; the intentional use of a microorganism or toxins derived from living organisms to produce death or disease in humans, animals, or plants.
**Branch:** The organizational level having functional or geographical responsibility for major aspects of incident operations. A branch is organizationally situated between the section and the division or group in the Operations Section, and between the section and units in the Logistics Section. Branches are identified by the use of Roman numerals or by functional area.

**CBRNE:** Chemical, biological, radiological, nuclear and explosive events—types of human-made disasters, which may be accidental or intentional.

**Chain of Command:** A series of command, control, executive, or management positions in hierarchical order of authority.

**Check-In:** The process through which resources first report to an incident. Check-in locations include the incident command post, Resources Unit, incident base, camps, staging areas, or directly on the site.

**Chief:** The ICS title for individuals responsible for management of functional sections: Operations, Planning, Logistics, Finance/Administration, and Intelligence (if established as a separate section).

**Command:** The act of directing, ordering, or controlling by virtue of explicit statutory, regulatory, or delegated authority.

**Command Staff:** In an incident management organization, the Command Staff consists of the Incident Command and the special staff positions of Public Information Officer (PIO), Safety Officer, Liaison Officer, and other positions as required, who report directly to the Incident Commander. They may have an assistant or assistants as needed.

**Common Operating Picture:** A broad view of the overall situation as reflected by situation reports, aerial photography, and other information or intelligence.

**Communications Unit:** An organizational unit in the Logistics Section responsible for providing communication services at an incident or an EOC. A communications Unit may also be a facility (e.g., a trailer or mobile van) used to support an Incident Communications Center.

**Cooperating Agency:** An agency supplying assistance, other than direct operational, support functions, or resources, to the incident management effort.

**Coordinate:** To advance systematically an analysis and exchange of information among principals who have or may have a need to know certain information to carry out specific incident management responsibilities.

**Comprehensive Emergency Management Plan (CEMP):** The framework for Washington State for mitigation, preparedness, response, and recovery activities. Its intent is to provide a structure for standardizing plans statewide and to facilitate interoperability between local, state and federal governments.

**Damage Assessment:** The appraisal, or determination of the actual effects resulting from a technological or natural disaster.

**Department of Information Systems (DIS) (state)**

**Department of Heath (DOH):** (state)

**Deputy:** A fully qualified individual who, in the absence of a superior, can be delegated the authority to manage a functional operation or perform a specific task. In some cases, a deputy can act a relief for a superior and, therefore, must be fully qualified in the position. Deputies can be assigned to the Incident Commander, General Staff, and Branch Directors.
**Disaster (Major)** (Stafford Act definition): Any natural catastrophe (including any hurricane, tornado, storm, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought), or regardless of cause, any fire, flood, or explosion, in any part of the United States, which in the determination of the President causes damage of sufficient severity and magnitude to warrant major disaster assistance under this chapter to supplement the efforts and available resources of States, local governments, and disaster relief organizations in alleviating the damage, loss, hardship, or suffering caused.

**Dispatch:** The ordered movement of a resource or resources to an assigned operational mission or an administrative move from one location to another.

**Division:** The partition of an incident into geographical areas of operation. Divisions are established when the number of resources exceeds the manageable span of control of the Operations Chief. A division is located within the ICS organization between the branch and resources in the Operations Section.

**Emergency:** Absent a Presidential declared emergency, any incident(s), human-caused or natural, that requires responsive action to protect life or property. Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, and emergency means any occasion or instance for which, in the determination of the President, Federal assistance is needed to supplement State and local efforts and capabilities to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States.

**Emergency Management Advisory Committee (EMAC), DSHS:** Authorized by the Secretary of DSHS and Management Team in February 2004 as a way for the agency to be informed and educated on issues of Emergency Management. Develop, review, coordinate and make recommendations to Executive Management regarding all aspects of emergency management disaster planning and recovery efforts.

**Emergency Management Council (EMC):** This council is advisory to the Governor on Emergency Management issues.

**Emergency Operations Centers (EOC’s):** The physical location at which the coordination of information and resources to support domestic incident management activities normally takes place. An EOC may be a temporary facility or may be located in a more central or permanently established facility, perhaps at a higher level of organization within a jurisdiction. EOC’s may be organized by major functional disciplines (e.g., fire, law enforcement, and medical services), by jurisdiction (e.g., Federal, State, regional, county, city, tribal), or multi-jurisdictional.

**Emergency Operations Plan:** The “steady-state” plan maintained by various jurisdictional levels for responding to a wide variety of potential hazards.

**Emergency Operating Procedure (EOP):** A prescribed procedure to be followed during an emergency incident.

**Emergency Public Information:** Information that is disseminated primarily in anticipation of an emergency or during an emergency. In addition to providing situational information to the public, it also frequently provides directive actions required to be taken by the general public.

Emergency Support Function (ESF): The functional approach that groups the types of assistance that a state is most likely to need, (e.g. mass care, health and medical services) as well as the kinds of federal operations support necessary to sustain state response actions (e.g., transportation, communications). ESF are expected to support one another in carrying out their respective missions.

Emergency Preparedness Response Team (EPRT): Teams formed within DSHS Regions, Administrations, Divisions or Offices to provide planning, leadership, and response functions to emergency incidents or disaster situations.

Emergency Support Team (EST): DSHS Executive Management Emergency Command Team formed during times of emergency incidents or disaster to provide support, direction, and Command functions to DSHS staff, EMD, state agencies, the general public and others. The Secretary will establish team membership and provide direction as necessary.

Essential Services Personnel: Are those positions providing service that must be maintained regardless of the emergency situation to ensure quality care and public safety. These positions include direct care in 24-hour, 7 day a week programs such as residential services, emergency services medication delivery to

Evacuation: Organized, phased, and supervised withdrawal, dispersal, or removal of civilians from dangerous or potentially dangerous areas, and their reception and care in safe areas.

Event: A planned, non-emergent activity. ICS can be used as the management system for a wide range of events, e.g., parades, concerts, or sporting events.

Executive Order: A rule or order having the force of law, issued by an executive authority of a government.

Exercise: A practice/simulated response to a natural or technological disaster involving planning, preparation, and execution. It is carried out for the purpose of training and/or evaluation.

Federal: Of or pertaining to the Federal Government of the United States of America.

Federal Emergency Management Agency (FEMA): The federal agency responsible for the U.S. government’s portion of the comprehensive emergency management program. It consists of a national office in Washington, D.C. and ten regional offices, one of which (Region X) is located in Bothell, Washington.

Function: Function refers to the five major activities in ICS: Command, Operations, Planning, Logistics, and Finance/Administration. The term function is also used when describing the activity involved, e.g., the planning function. A sixth function, Intelligence, may be established, if required, to meet incident management needs.

General Staff: A group of incident management personnel organized according to function and reporting to the Incident Commander. The General Staff normally consists of the Operations Section Chief, Planning Section Chief, Logistics Section Chief, and Finance/Administration Section Chief.

Governor’s Authorized Representative (GAR): Serves as the State’s representative for the execution of all necessary documents for disaster assistance following a gubernatorial or Presidential declaration of an emergency or disaster.

Group: Established to divide the incident management structure into functional areas of operation. Groups are composed of resources assembled to perform a special function not necessarily within a single geographic division. Groups, when activated, are located between branches and resources in the operations Section. (See Division)
**Hazard:** Something that is potentially dangerous or harmful, often the root cause of an unwanted outcome.

**Hazardous Materials (HAZMAT):** Any element, compound, or combination thereof, which is flammable, corrosive, detonable, toxic, radioactive, an oxidizer, an etiologic agent, or highly reactive, and which, because of handling, storing processing, or packaging, may have detrimental effects upon operating and emergency personnel, the public, equipment and/or the environment.

**Immediate Services Program (ISP):** A grant awarded by FEMA to states to develop crisis-counseling program for 60 days, after a presidential declaration of an emergency.

**Incident:** An occurrence or event, natural or human-caused that requires an emergency response to protect life or property. Incidents can, for example, include major disasters, emergencies, terrorist attacks, terrorist threats, wild land and urban fires, floods, hazardous materials spills, nuclear accidents, aircraft accidents, earthquakes, hurricanes, tornadoes, tropical storms, war-related disasters, public health and medical emergencies, and other occurrences requiring an emergency response.

**Incident Action Plan (IAP):** An oral or written plan containing general objectives reflecting the overall strategy for managing an incident. It may include the identification of operational resources and assignments. It may also include attachments that provide direction and important information for management of the incident during one or more operational periods.

**Incident Commander (IC):** The individual responsible for all incident activities, including the development of strategies, tactics, and the ordering and release of resources. The IC has overall authority and responsibility for conducting incident operations and is responsible for the management of all incident operations at the incident site.

**Incident Command Post (ICP):** The field location at which the primary tactical-level, on-scene incident command functions are performed. The ICP may be collocated with the incident base or other incident facilities and is normally identified by a green rotating or flashing light.

**Incident Command System (ICS):** A standardized on-scene emergency management construct specifically designed to provide for the adoption of an integrated organizational structure that reflects the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries. ICS is the combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, designed to aid in the management of resources during incidents. It is used for all kinds of emergencies and is applicable to small as well as large and complex incidents. ICS is used by various jurisdictions and functional agencies, both public and private, to organize field-level incident management operations.

**Incident Command Team (ICT):** The IC and appropriate Command and General Staff personnel assigned to an incident.

**Incident Objectives:** Statements of guidance and direction necessary for selecting appropriate strategy(s) and the tactical direction of resources. Incident objectives are based on realistic expectations of what can be accomplished when all allocated resources have been effectively deployed. Incident objectives must be achievable and measurable, yet flexible enough to allow strategic and tactical alternatives.

**Information Officer:**
The Information Officer is responsible for the development and release of accurate and complete information regarding the incident and to serve as the point of contact for the media and other appropriate agencies requiring information directly from the incident scene.
Initial Action: The actions taken by those responders first to arrive at an incident site.

Initial response: resources initially committed to an incident.

Intelligence Officer: The Intelligence officer is responsible for managing internal information, intelligence, and operational security requirements supporting incident management activities. These may include information security and operational security activities, as well as the complex task of ensuring that sensitive information of all types (e.g., classified information, law enforcement sensitive information, proprietary information, or export-controlled information) is handled in a way that not only safeguards the information, but also ensures that it gets to those who need access to it to perform their missions effectively and safely.

Inter-local Agreement: Agreement or contract between government entities at the local level.

Joint Information Center (JIC): A facility established to coordinate all incident-related public information activities. It is the central point of contact for all news media at the scene of the incident. Public information officials from all participating agencies should collocate at the JIC.

Joint Information System (JIS): Integrates incident information and public affairs into a cohesive organization designed to provide consistent, coordinated, timely information during crisis or incident operations. The mission of the JIS is to provide a structure and system for developing delivering coordinated interagency messages; developing, recommending, and executing public information plans and strategies on behalf of the IC; advising the IC concerning public affairs issues that could affect a response effort; and controlling rumors and inaccurate information that could undermine public confidence in the emergency response effort.

Jurisdiction: A range or sphere of authority. Public agencies have jurisdiction at an incident related to their legal responsibilities and authority. Jurisdictional authority at an incident can be political or geographical (e.g., city, county, tribal, State, or Federal boundary lines) or functional (e.g., law enforcement, public health).

Liaison: A form of communication for establishing and maintaining mutual understanding and cooperation.

Liaison Officer: A member of the Command Staff responsible for coordinating with representatives from cooperating and assisting agencies.

Local: For the purpose of the DSHS Emergency Plan, the term Local will refer to city, county or tribal jurisdictions.

Local Government: A county, municipality, city, town, township, local public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments I incorporated as a nonprofit corporation under State law), regional or interstate government entity, or agency or instrumentality of a local government, an Indian tribe or authorized tribal organization, or in Alaska a Native village or Alaska Regional Native Corporation, a rural community, unincorporated town or village, or other public entity. See Section2 (1), Homeland Security Act of 2002, Pub. L. 107-296, 116 Stat. 2135 (2002).

Logistics: Providing resources and other services to support incident management.

Logistics Section: The section responsible for providing facilities, services, and material support for the incident.
**Major Disaster:** As defined under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5122), a major disaster is:

“Any natural catastrophe (including any hurricane, tornado, storm, high water, win-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, or drought), or, regardless of cause, any fire, flood, or explosion, in any part of the United States, which in the determination of the President causes damage of sufficient severity and magnitude to warrant major disaster assistance under this Act to supplement the efforts and available resources of States, tribes, local governments, and disaster relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby.”

**Management By Objective (MBO):** A management approach that involves a four-step process for achieving the incident goal. The Management by Objectives approach includes the following: establishing overarching objectives, developing and issuing assignments, plans, procedures, and protocols, establishing specific, measurable objectives for various incident management functional activities and directing efforts to fulfill them, in support of defined strategic objectives, and documenting results to measure performance and facilitate corrective action.

**Mitigation:** The activities designed to reduce or eliminate risks to persons or property or to lessen the actual or potential effects or consequences of an incident. Mitigation measures may be implemented prior to, during, or after an incident. Mitigation measures are often informed by lessons learned from prior incidents. Mitigation involves ongoing actions to reduce exposure to, probability of, or potential loss from hazards. Measures may include zoning and building codes, floodplain buyouts, and analysis of hazard-related data to determine where it is safe to build or locate temporary facilities. Mitigation can include efforts to educate governments, businesses, and the public on measures they can take to reduce loss and injury.

**Mobilization:** The process and procedures used by all organizations- Federal, State, local and tribal-for activating, assembling, and transporting all resources that have been requested to respond to or support an incident.

**Multi-agency Coordination Entity:** A multi-agency coordination entity functions within a broader multi-agency coordination system. It may establish the priorities among incidents and associated resource allocations, resolve conflicts in agency policies, and provide strategic guidance and direction to support incident management activities.

**Multi-agency Coordination Systems:** Multi-agency coordination systems provide the architecture to support coordination for incident prioritization, critical resource allocation, communications systems integration, and information coordination. The components of multi-agency coordination systems include facilities, equipment, emergency operation centers (EOC’s), specific multi-agency coordination entities, personnel, procedures, and communications. These systems assist agencies and organizations to fully integrate the subsystems of the NIMS.

**Multi-jurisdictional Incident:** An incident requiring action from multiple agencies that each have jurisdiction to manage certain aspects of an incident. In ICS, these incidents will be managed under Unified Command.

**Mutual-Aid Agreement (MAA) or Memorandum of Understanding (MOU):** Written agreement between agencies and/or jurisdictions that they will assist one another on request, by furnishing personnel, equipment, and/or expertise in a specified manner.

**National:** Of a nationwide character, including the Federal, State, local, and tribal aspects of governance and policy.
National Disaster Medical System (NDMS): A cooperative, asset-sharing partnership between the Department of Health and Human Services, the Department of Veterans Affairs, the Department of Homeland Security, and the Department of Defense. NDMS provides resources for meeting the continuity of care and mental health services requirements of the Emergency Support Function 8 in the Federal Response Plan.

National Incident Management System (NIMS): A system mandated by HSPD-5 that provides a consistent nationwide approach for Federal, State, local and tribal governments; the private-sector, and nongovernmental organizations to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents, regardless of cause, size, or complexity. To provide for interoperability and compatibility among Federal, State, local, and tribal capabilities, the NIMS includes a core set of concepts, principles, and terminology. HSPD-5 identifies these as the ICS; multi-agency coordination systems; training; identification and management of resources (including systems for classifying types of resources); qualification and certification; and the collection, tracking, and reporting of incident information and incident resources.

National Response Plan (NRP): A plan mandated by HSPD-5 that integrates Federal domestic prevention, preparedness, response, and recovery plans into one all-discipline, all-hazards plan.

Nongovernmental Organization (NGO): An entity with an association that is based on interests of its members, individuals, or institutions and that is not created by a government, but may work cooperatively with government. Such organizations serve a public purpose, not a private benefit. Examples of NGOs include faith-based charity organizations and the American Red Cross (ARC).

Operational Period: The time scheduled for executing a given set of operation actions, as specified in the Incident Action Plan (IAP). Operational periods can be of various lengths, although usually not over 24 hours.

Operations Section: The section responsible for all tactical incident operations. In ICS, it normally includes subordinate branches, divisions, and/or groups.

Outreach: A method for delivering services to disaster survivors and victims. It consists primarily of face-to-face contact with survivors in their natural environments in order to provide disaster-related services. Outreach is the means by which services are made available to people.

Personnel Accountability: the ability to account for the location and welfare of incident personnel. It is accomplished when supervisors ensure that ICS principles and processes are functional and that personnel are working within established incident management guidelines.

Planning Meeting: A meeting held as needed prior to and throughout the duration of an incident to select specific strategies and tactics for incident control operations and for service and support planning. For larger incidents, the planning meeting is a major element in the development of the IAP.

Post –Traumatic Stress Disorder (PTSD): A disorder caused by experiencing traumatic events that result in prolonged anxiety and emotional distress.

Preparedness: The range of deliberate, critical tasks and activities necessary to build, sustain, and improve the operational capability to prevent, protect against, respond to, and recover from domestic incidents. Preparedness is a continuous process.

Preparedness involves efforts at all levels of government and between government and private-sector and nongovernmental organizations to identify threats, determine vulnerabilities, and identify required resources. Within the NIMS, preparedness is operationally focused on establishing guidelines, protocols, and standards for planning, training and exercises, personnel qualification and certification, equipment certification, and publication management.
**Preparedness Organizations:** Groups that provide interagency coordination for domestic incident management activities in a non-emergency context. Preparedness organizations can include all agencies with a role in incident management, for prevention, preparedness, response, or recovery activities. They represent a wide variety of committees, planning groups, and other organizations that meet and coordinate to ensure the proper level of planning, training, equipping, and other preparedness requirements within a jurisdiction or area.

**Prevention:** Actions to avoid an incident or to intervene to stop an incident from occurring. Prevention involves actions to protect lives and property. It involves applying intelligence and other information to a range of activities that may include such countermeasures as deterrence operations; heightened inspections; improved surveillance and security operations; investigations to determine the full nature and source of the threat; public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and, as appropriate, specific law enforcement operations aimed at deterring, preempting, interdicting, or disrupting illegal activity and apprehending potential perpetrators and bringing them to justice.

**Private Sector:** Organizations and entities that are not part of any governmental structure. It includes for-profit and not-for-profit organizations, for-profit and informal structures, commerce and industry, and private voluntary organizations (PVO).

**Processes:** Systems of operations that incorporate standardized procedures, methodologies, and functions necessary to provide resources effectively and efficiently. These include resource typing, resource ordering and tracking, and coordination.

**Psychological First-Aid:** Pragmatically oriented interventions with disaster survivors or emergency responders targeting acute stress reactions and immediate needs. The goals of psychological first aid include the establishment of safety, stress-related symptom reduction, restoration of rest and sleep, linkage to needed resources and re-connection with social supports.

**Public Information Officer (PIO):** A member of the Command Staff responsible for interfacing with the public and media or with other agencies with incident-related information requirements.

**Publications Management:** The publications management subsystem includes materials development, publication control, publication supply, and distribution. The development and distribution of NIMD materials is managed through this subsystem. Consistent documentation is critical to success, because it ensures that all responders are familiar with the documentation used in a particular incident regardless of the location or the responding agencies involved.

**Qualification and Certification:** This subsystem provides recommended qualification and certification standards for emergency responder and incident management personnel. It also allows the development of minimum standards for resources expected to have an interstate application. Standards typically include training, currency, experience, and physical and medical fitness.

**Reception Area:** This refers to a location separate from staging areas, where resources report in for processing and out-processing. Reception Areas provide accountability, security, situational awareness briefings, safety awareness, distribution of IAPs, supplies and equipment, feeding, and bed down.

**Recovery:** The development, coordination, and execution of service-and-sit-restoration plans; the reconstitution of government operations and services; individual, private-sector, nongovernmental, and public-assistance programs to provide housing to promote restoration; long-term care and treatment of affected persons; additional measures for social, political, environmental, and economic restoration; evaluation of the incident to identify lessons learned; post incident reporting; and development of initiatives to mitigate the effects of future incidents.
**Recovery Plan:** A plan developed by a State, local, or tribal jurisdiction with assistance from responding Federal agencies to restore the affected area.

**Resilience:** The ability to maintain relatively stable physical and psychological functioning.

**Resources:** Personnel and major items of equipment, supplies, and facilities available or potentially available for assignment to incident operations and for which status is maintained. Resources are described by kind and type and may be used in operational support or supervisory capacities at an incident or at an EOC.

**Resource Management:** Efficient incident management requires a system for identifying available resources at all jurisdictional levels to enable timely and unimpeded access to resources needed to prepare for, respond to, or recover from an incident. Resource management under the NIMS includes mutual-aid agreement; the use of special Federal, State, local, and tribal teams; and resource mobilization protocols.

**Resources Unit:** Functional unit within the Planning Section responsible for recording the status of resources committed to the incident. This unit also evaluates resources currently committed to the incident, the effects additional responding resources will have on the incident, and anticipated resource needs.

**Response:** Activities that address the short-term, direct effects of an incident. Response includes immediate actions to save lives, protect property, and meet basic human needs. Response also includes the execution of emergency operations plans and of mitigation activities designed to limit the loss of life, personal injury, property damage, and other unfavorable outcomes. As indicated by the situation, response activities include applying intelligence and other information to lessen the effects or consequences of an incident; increased security operation; continuing investigations into nature and source of the threat; ongoing public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and specific law enforcement operations aimed at preempting, interdicting, or disrupting illegal activity, and apprehending actual perpetrators and bringing them to justice.

**Risk:** A measure of the harm to human health that results from being exposed; uncertainty that surrounds events and outcomes.

**Safety Officer:** A member of the Command Staff responsible for monitoring and assessing safety hazards or unsafe situations and for developing measures for ensuring personnel safety.

**Section:** The organizational level having responsibility for a major functional area of incident management, e.g., Operations, Planning, Logistics, Finance/Administration, and Intelligence (if established). The section is organizationally situated between the branch and the Incident Command.

**Span of Control:** The number of individuals a supervisor is responsible for, usually expressed as the ratio of supervisors to individuals. (Under the NIMS, an appropriate span of control is between 1:3 and 1:7.)

**Staging Area:** Location established where resources can be placed while awaiting a tactical assignment. The Operations Section manages Staging Areas.

**Standard Operating Procedure (SOP):** A prescribed procedure to be followed routinely.

**State Coordinating Officer (SCO):** The individual appointed by the Governor to act in cooperation with the Federal Coordinating Officer to administer disaster recovery efforts. The SCO may also function as the Disaster Recovery Manager and as the Governor’s Authorized Representative.

**State Emergency Operations Center (SEOC):** The facility within the Division of Emergency Management, located at Camp Murray, Tacoma, Washington, from which state emergency/disaster operations are coordinated.

**Strategic:** Strategic elements of incident management are characterized by continuous long-term, high-level planning by organizations headed by elected or other senior officials. These elements involve the adoption of long-range goals and objectives, the setting of priorities; the establishment of budgets and other fiscal decisions, policy development, and the application of measures of performance or effectiveness.

**Strike Team:** A set number of resources of the same kind, and type that have an established minimum number of personnel.

**Strategy:** The general direction selected to accomplish incident objectives set by the IC.

**Supporting Technologies:** Any technology that may be used to support the NIMS is included in this subsystem. These technologies include orthophoto mapping, remote automatic weather stations, infrared technology, and communications, among various others.

**Surge:** Refers to the initial influx of patients in the immediate aftermath of a disaster.

**Task Force:** Any combination of resources assembled to support a specific mission operational need. All resource elements within a Task Force must have common communications and a designated leader.

**Technical Assistance:** Support provided to State, local, and tribal jurisdictions when they have the resources but lack the complete knowledge and skills needed to perform a required activity (such as mobile-home park design and hazardous material assessments).

**Terrorism:** Under the Homeland Security Act of 2002, terrorism is defined as activity that involves an act dangerous to human life or potentially destructive of critical infrastructure or key resources and is a violation of the criminal laws of the United States or of an State or other subdivision of the United States in which it occurs and is intended to intimidate or coerce the civilian population or influence a government or affect the conduct of a government by mass destruction, assassination, or kidnapping. See Section 2 (15), Homeland Security act of 2002, Pub. L. 107-296, 116 Stat. 2135 (2002).

**Threat:** An indication of possible violence, harm, or danger.

**Tools:** Those instruments and capabilities that allow for the professional performance of tasks, such as information systems, agreements, doctrine, capabilities, and legislative authorities.

**Tribal:** Any Indian tribe, band, nation, or other organized group or community, including any Alaskan Native Village as defined in or established pursuant to the Alaskan Native Claims Settlement Act (85 stat. 688) [43 U.S.C.A. and 1601 et seq.], that is recognized as eligible for the special programs and services provided by the united States to Indians because of their status as Indians.

**Type:** A classification of resources in the ICS that refers to capability. Type 1 is generally considered to be more capable than Types 1, 2, o 4, respectively, because of size; power; capacity; or, in the case of incident management teams, experience and qualifications.
**Unified Area Command:** A Unified Area Command is established when incidents under an Area Command are multi-jurisdictional. (See *Area Command.*)

**Unified Command (UC):** An application of ICS used when there is more than one agency with incident jurisdiction or when incidents cross political jurisdictions. Agencies work together through the designated members of the UC, often the senior person from agencies and/or disciplines participating in the UC, to establish a common set of objectives and strategies and a single IAP.

**Unit:** the organizational element having functional responsibility for a specific incident planning, logistics, or finance/administration activity.

**Unity of Command:** the concept by which each person within an organization reports to one and only one designated person. The purpose of unity of command is to ensure unity of effort under one responsible commander for every objective.

**Volunteer:** For the purposes of the NIMS, a volunteer is any individual accepted to perform services by the lead agency, which has authority to accept volunteer services, when the individual performs services without promise, expectation, or receipt of compensation for services performed. See, e.g., U.S.C. 742f© and CFR 553.101.

**Washington Voluntary Organizations Active in Disaster (WAVOAD):** A group of organizations providing voluntary assistance following an emergency or disaster.

PLAN OVERVIEW

The Division of Finance and Operations Support activates its Emergency Response Plan when directed either by the Division Director, CA Assistant Secretary, or designees, when normal operations of the Division are disrupted and can no longer follow usual procedures. The Division’s Emergency Response Plan provides support to the agency and affected areas and to the well-being of onsite Division staff during an emergency.

During an emergency event FOSD may be adversely impacted. The magnitude of such an event may require varying degrees of action. An emergency event could impact this division, the entire agency, and local field offices including surrounding communities. In an attempt to identify, prepare for, respond to, and recover from an emergency or disaster, this plan outlines FOSD’s response framework. To ensure the agency can maintain its critical functions, this plan addresses operations, payment support, and the continuation of payroll and foster care support payments. FOSD’s plan will provide efficient planning to utilize all available resources during an emergency and to ensure the continuity of operations of the agency in times of an emergency or disaster.

The following Emergency Response Plan for the Finance and Operations Support Division is based on assumptions of a disaster at varying degrees and is outlined as:

- A natural, technological or human-caused disaster or emergency, that would have varying degrees of impact on the agency, the division and its systemic operations
- Portions of, or the entire agency facility may be inhabitable, and would require use of an alternate facility
- Vital agency functions will need to be carried out regardless of the extent of damage or impact of the emergency
- If a widespread disaster occurred, employees may need to take the appropriate steps to ensure the safety and security of their families prior to returning to work, and from a division/agency view this could have a negative impact on staff workload and possible re-assignment to more vital functions
- Possible disruptions in utility services including electricity, gas, telecommunications, water and cable
- Providers, county and local governments, and other state agencies that the agency normally interacts with may also be responding to the emergency, and may be experiencing some disruption in their agency operations as well
- Normal responder support and resources will likely not be available during and immediately after an event as they may be both victims and responders as well and resources likely stretched well beyond capacity

DIVISION MANAGEMENT

Incident Command System (ICS)

- The Incident Command Structure and responsibilities were developed and established based on FOSD’s vital services and support to the administration.

| 1. | Incident Commander             | • Activate the plan.  
• Monitor potential threats.  
• Support on-scene response operations.  
• Receive, compile, and display data on the emergency situation, resource status and commitments as a basis for planning.  
• Analyze current problems, anticipate potential problems and formulate options for solving them.  
• Coordinate damage assessment activities and assess the status of staff health and safety, worksite operations.  
• Request assistance from other agencies and administrations as may be required.  
• Implement incident cost tracking and analysis. | Director   | Office Chiefs          |
| 2. | CEMP Coordinator               | • Program Manager for CA Emergency Management.  
• Respond and function as CEMP Coordinator in support of the worksite/facility Incident Commander. | Designated Staff |                        |
| 3. | Personnel Operations Officer   | • Initiate notification of staff via division emergency phone tree.  
• Coordinate with Field Operations regarding human resource activities, issues, status of personnel, staff redeployment and support. | HR Manager |                        |
| 4. | Federal Funding Manager        | • Restore RMTS data gathering operations.  
• Restore data from back-up files. | Designated Staff |                        |
| 5. | SSI Unit Supervisor            | • Work with the Office of Accounting Services to restore access to funds held in trust. | Designated Staff |                        |
| 6. | Accounting Manager             | • Work with the Office of Accounting Services and the Office of Financial Management to restore the ability to make needed payments. | Designated Staff |                        |

**Emergency Preparedness, Response and Recovery**

Emergency Planning and Response Teams (EPRT) provide for planning, leadership and respond to incidents of disaster or emergency situations to DSHS programs, facilities, and worksites. Their goal is to minimize the impacts of emergencies and disasters on the people, property, environment, and economy of Washington State in order to:

- Protect the safety of staff, clients, and visitors; and protect state physical assets.
- Assure business continuity.
- Establish emergency communication with DSHS Headquarters and Regional Command centers.
- Support local jurisdiction responders and state-wide emergency responders in the case of a disaster.
Emergency Preparedness, Response and Recovery Team (EPRT)

- FOSD has established an Emergency Preparedness, Response and Recovery Team (EPRT) for the division. FOSD has clearly identified a communication chain to notify and update FOSD staff in the event of an emergency. The worker safety committee has addressed worksite preparedness and emergency plans.

- See Table on next page for list of EPRT team members,
# Emergency Planning and Response Team (EPRT)

Initial Response to Facility/Worksite Incidents

Background

- This EOP identifies the responsibility and procedure for the initial response to Facility/Worksite incidents. The duties of the On-Scene Incident Commander (OSIC) are provided in this procedure.

Responsibility

The first response person to arrive at the scene of the incident shall serve as OSIC until relieved in accordance with this procedure.

The OSIC is determined by the type of incident.

- EMERGENCY PREPAREDNESS AND RESPONSE TEAM (EPRT) shall respond in the capacity of OSIC on all Facility/Worksite fire alarms, medical emergencies, and hazardous material incidents.

- FACILITIES MANAGER
  - Respond in the capacity of OSIC on all building and utility related incidents.
  - Respond in the capacity of OSIC after normal duty hours and in the absence of Facility/worksite staff.

- SECURITY (If applicable)
  - Notify OSIC of incident
  - Respond in the capacity of OSIC on all security related incidents

PROCEDURE

- On notification of a Facilities/Worksite incident, SECURITY shall make the necessary notifications including notification of the OSIC based on the guidelines provided above.

- DEPARTMENTS, as required, shall respond to the scene. The first response person to arrive at the scene of the incident shall assume responsibility as OSIC until relieved.

- OSIC shall report via (Radio Frequency 3 for example), that their response and arrival on-scene and maintain communications with (Identify person/position).

- The OSIC has the authority and responsibility to direct the Facility/Worksite resources to mitigate the incident.

OSIC Guidelines
The first response Department to arrive at the scene of an emergency situation serves as the OSIC until relieved in accordance with established procedures. The IC will:

- Establish an On-Scene Incident Command Post (ICP).
- Identify and summon Facility/Worksite response resources required.
- Direct resources on-scene.
- Provide liaison with external response resources, e.g., fire department.
- Provide an assessment of the situation to the Facility/Worksite Incident Commander (IC).
- Make an assessment of need for EOC support and request activation, if deemed appropriate.

The OSIC is generally responsible for field operations, including:

- Isolating, controlling, and securing the scene.
- Directing and controlling the on-scene response to the emergency situation and managing the emergency resources committed there.
- Warning staff in the area of the incident and providing emergency instructions to them.
- Determining and implementing protective measures (evacuation or in-place sheltering) for the staff in the immediate area or the incident and for responders at the scene.
- Implementing traffic control measures in and around the incident scene.
- Requesting additional resources from the EOC.
- Keeping the Facility/Worksite Incident Commander informed of the current situation at the incident site.
- Safety of Facility/Worksite response personnel.

**Plan Activation**

- The Division of Finance and Operations Support activates its Emergency Response Plan when ordered either by the Division Director, CA Assistant Secretary, or designees, when normal operations of the Division are disrupted and can no longer follow usual procedures. The Division response plan provides support the agency and affected areas and to the well being of onsite Division staff during an emergency.

- The Division will test the Emergency Response Plan twice annually, the last Monday in May and August. This will include a written critique and evaluation. Changes will be made if and when necessary.

**Payment Continuation**

- The Division has the responsibility of making payments for clients, foster parents and providers. In the event of an emergency a priority will be given to payments to foster parents and for adoption support.

- The current structure used by the Children’s Administration for making payments to foster parents and providers begins with the SACWIS system, FamLink. FamLink feeds information into the Social Services Payment System, (SSPS) to determine when a payment is needed. SSPS uses a system of crosswalks to determine the appropriate Agency Financial Reporting System (AFRS) account coding to assign to the payment. This information is sent to AFRS who initiates the payment and generates a warrant to be sent to the service provider.
Because the Children’s Administration payments come from the AFRS system, we depend on assistance from the Office of Accounting Services (OAS) and the Office of Financial Management (OFM) if the system is down. OFM has the ability to make payments and coordinate with the Treasury Department.

The Accounting Policy Management Board is drafting a policy to address the continuation of payments in an emergency for the Department of Social and Health Services.

**Levels of an Emergency and Relationship to Normal Functions**

What is an emergency?
“Any physical event that interferes with the Department’s ability to conduct critical transactions or provide time critical services.” It is important to know, understand and prepare for the three levels of an emergency.

There is a wide range of emergencies that might effect:

- Facilities
- Access to facilities
- Single area within a building or on a campus
- Computer access to data
- Staff

### Level 1
**Minor**

This is any serious situation that requires immediate actions, and is beyond the scope of day to day situations. This type of an emergency is considered minor in nature and can most likely be handled on the local level with notification and reporting to occur through normal channels.

- Estimated restoration time is one-shift to 24 hours
- Localized event to one building or campus
- Local response is adequate for reestablishing all systems
- Minor damage to hardware, software, electrical equipment or workspace areas
- Examples include: temporary power outages, or a small trash can fire

### Level 2
**Major**

This is a serious situation in which the disruption is anticipated to be more significant than a minor event, but is less than a catastrophic event. It may be considered a major emergency even if only one site has issues, or is part of a co-located facility.

- Estimate restoration time is 24 to 72 hours
- Multiple buildings/offices/facilities affected by an event
- Damage to buildings/offices/facilities is more than minor in nature
- Replacement of equipment or facilities may be required
- Examples include: a severe, prolonged storm affecting numerous sites. Significant fire causing temporary closure of the building, or a significant computer virus or telecommunication losses
Level 3
Catastrophic
This is a catastrophic emergency in which disruption is anticipated to be in excess of 72 hours.

- Damage from a catastrophic emergency is severe
- May involve total destruction of a worksite
- Major replacement of equipment or restoration/renovation is required
- Staff are required to be relocated or not able to participate in normal activities
- Examples include: regional earthquake affecting transportation and communication, or a significant building fire.

Vital Services

In the event of an emergency FOSD staffing levels may not be sufficient to provide the services and support the Division is responsible for. However we will work to establish the ability to meet these responsibilities and provide the vital support needed to allow the administration to provide vital services to children and youth. Priorities will be given to:

a. Restoring the ability to make payments
b. Regain access to children’s funds held in trust
c. Restore backed up data and compile necessary data for continuance of RMTS tracking.

HAZARD AND VULNERABILITY ANALYSIS

</table>
RISK MITIGATION FACTORS

FOSD will identify those activities that either prevent the occurrence of an emergency or reduce vulnerability in ways that minimize the adverse impact of any disaster. Mitigation actions will be taken to eliminate or reduce the degree or risk to human life and property from natural and technological hazards.

The following are examples of actions for structural mitigation of risk factors relevant to FOSD and Office Building 2:

Earthquake:

- Fasten pictures, mirrors, shelves, and bookcases securely to walls. Hang heavy items such as pictures and mirrors that haven’t been well secured away from beds, couches, and anywhere people sit.
- Place large or heavy objects on lower shelves or on floors.
- Store weed killers, pesticides, and flammable products securely in closed cabinets with latches.
- Store breakable items such as bottled foods, glass, and china in low, closed cabinets with latches. Taller cabinets should be secured to walls.
- Secure computers and affiliated equipment with tie-downs.
- Brace overhead light fixtures.
- Secure water heaters by strapping them to wall studs.
- Have buildings and foundations evaluated for structural integrity and to see if seismic upgrades are necessary or warranted.
- Replace rigid gas and water pipes with flexible lines if practical. Alternatively, install flexible pipe connections on water and gas lines.
- Make sure staff knows how to shut off water, power and electricity to buildings in the event of gas or water line break.
- Plan at least two evacuation routes since roads may be blocked or closed.
- Be prepared to do without services you normally depend on—electricity, telephone, natural gas, gasoline pumps, cash registers, ATMs, and Internet transactions for a planned length of time.
- For 24/7 facilities, be prepared for a disruption to food, water, fuel and other supplies for a planned length of time.
- The following are things you might want to consider having in a survival kit on each floor of the building:
  - Portable, battery-operated radio and extra batteries.
  - Several flashlights and extra batteries.
  - First aid kit and manual.
  - Hard hats and dust masks.
  - Fluorescent tape to rope off dangerous areas.
Install emergency lighting in all restrooms and at all exits to facilitate egress in the event of a power loss.

**Severe Storm:**

- Be prepared to do without services you normally depend on—electricity, telephone, natural gas, gasoline pumps, cash registers, ATMs, and Internet transactions for a planned length of time.
- For 24/7 facilities, be prepared for a disruption to food, water, fuel and other supplies for a planned length of time.
- The following are things you might want to consider having in a survival kit on each floor of the building:
  - Portable, battery-operated radio and extra batteries.
  - Several flashlights and extra batteries.
  - First aid kit and manual.
  - Hard hats and dust masks.
  - Fluorescent tape to rope off dangerous areas.

1. Install emergency lighting in all restrooms and at all exits to facilitate egress in the event of a power loss.

**Volcanic Activity Including Lahar and Tsunami:**

- If your facility is located near a known volcano, active or dormant, or is located near the coast, be ready to evacuate at a moment’s notice. Make sure staff recognize lahar and tsunami warnings and understand what is expected of them in the event of a warning.
- Plan at least two evacuation routes since roads may be blocked or closed.

**Structure Fire:**

- Make sure smoke detectors are installed and working in all work, living and sleeping areas according to code.
- Make sure sprinkler systems and fire extinguishers are inspected regularly and that staff are trained in the proper use of extinguishers.
- Make sure all exits are well marked with emergency lighting.
- Make sure all automatic door closures are functional and that doorways are kept clear of obstructions that could keep fire-doors from closing completely.

**Chemical Hazard – Bio Hazard:**

- If there are any symptoms or suspected exposures call 911 immediately and consult with a healthcare provider as soon as possible. If you believe you have been intentionally exposed, you should contact law enforcement officials immediately.

**Terrorism:**
• Educate staff to be aware of their surroundings and any conspicuous or unusual behavior.

• Do not accept packages from strangers. Train staff to promptly report unusual behavior, suspicious or unattended packages, and strange devices to the police or security personnel.

• Identify where emergency exits are located in buildings and plan for evacuation routes in the event of an emergency.

• Be prepared to do without services you normally depend on—electricity, telephone, natural gas, gasoline pumps, cash registers, ATMs, and Internet transactions for a planned length of time.

• For 24/7 facilities, be prepared for a disruption to food, water, fuel and other supplies for a planned length of time.

• The following are things you might want to consider having in a survival kit on each floor of the building:
  
  Portable, battery-operated radio and extra batteries.

  Several flashlights and extra batteries.

  First aid kit and manual.

  Hard hats and dust masks.

  Fluorescent tape to rope off dangerous areas.

**Workplace Violence:**

• Install building security systems that require a code or badge to admit staff to workplace buildings at unmanned entrances.

• Train staff to challenge unidentified strangers wandering through the work area.

• Install adequate lighting around building perimeters and in parking areas.

**COMMUNICATIONS**

The following communication requirements and considerations will assist in establishing and maintaining adequate internal and external communications during an emergency situation.

There are various communication needs when an emergency occurs, both internally, at the site of the incident, and across the division and agency.

Depending on the magnitude of the event, communication needs and methods will vary.

**Assumptions**

• Loss of communication systems (telephone, cellular phones, pagers, email) will occur as a result of a disaster or emergency situation.

• 911 systems can be disabled due to a catastrophic community incident that results in line congestion, or loss of power, or telephone services.

• Alarm and other protection systems (security, fire, electronic door controls) may fail during a disaster. Systems can either fail open, or closed dependent on the system. Alternative plans for manual operation need to be identified.
• Telephone systems (switchboards, voice messaging, digital phone lines) will fail in a power outage if no back-up emergency generator supports them.
• Some back-up emergency power systems for telephone switches and computer systems are battery based and therefore may have limited support of only a few hours.
• In a large disaster, local and national media (radio, television, internet) may be a source of information both pre and post event but may broadcast unreliable information.

**Emergency Go-Kits**

a. CA, FOSD will utilize Emergency Go-Kits to support the Division’s response. When possible, data will be stored on a CD and updated on a bi-weekly basis. Upon evacuation, each department / section leader is to bring the Go-Kit to the alternate facility and make the necessary preparations and staff assignments to utilize the contents of the go-kits
• The Go-Kits will contain:
  • Contact information:
    • Management, FOSD Staff, Regional, Local office
  • Communication devices, with appropriate back up batteries:
    • Lap top
    • Black berry or cell phone
## Communication Strategies

**Distribution to staff and managing transmission traffic and channel designation**

<table>

</table>
STAFF COMMUNICATION AND NOTIFICATION

Essential staff notification

A determination of essential staff for emergency response, roles, and responsibilities has been identified, and is updated periodically. This includes after-hours personal contact information: name, address, home phone/cell. Notification via the Critical Response Team.

All staff notification

Contact information is private and confidential and is only made available when deemed necessary and appropriate. The all staff after-hours list includes: name, area, home phone/cell and reporting facility and is available alphabetical or by area. When an emergency occurs after-hours this list and call tree will be accessed. FOSD staff is aware of their alternate reporting facility and will be instructed to do so at the time of the emergency and call tree notification system. Notification occurs by a pre-identified call up list, which is updated monthly. During regular scheduled working hours, staff are to remain at their station until directed otherwise to other locations deemed necessary by the incident commander.

Emergency Notification (Pre-Incident Warning):

In a large scale disaster, local and national media may be a notification resource. The Washington State Emergency Management Division notifies the DSHS Emergency Management Coordinator for predicted emergencies, such as: severe storm, volcano, and tsunami, terrorist attack. The Coordinator notifies impacted facilities or programs. The Assistant Secretary for Children’s Administration will coordinate with the DSHS Emergency Support Team (EST) for all communications during and after an emergency. The incident commander or identified individual will notify FOSD staff in the event of an emergency followed by specific directives.

Emergency Response

Communication with people designated as first responders (police, fire, and internal response teams) who can respond immediately and are trained and prepared to offer assistance in the areas needed.

911

- The most reliable system is your local 911. This allows the most direct and time efficient response by trained emergency personnel. This system is your first choice for emergencies with injuries, fire related, crime related, or major building or property damage, etc. Enhanced 911 systems are designed to automatically identify the physical location (at the phone location) of the caller and most counties have enhanced 911 systems. Individual phone systems in some facilities may not have this capability, and response will be to the site address.

<tr>
<td>Providence St Peter Hospital</td>
<td>(360) 491-9480</td>
<td>413 Lilly Rd NE</td>
<td></td>
</tr>
</tbody>
</table>
Recommended Staff Safety Skills:

- Know who on the floor is certified in First Aid and CPR.
- Learn how to use a fire extinguisher and know where it is located.

Evacuation Planning Guidelines:

<table>
<thead>
<tr>
<th>Always</th>
<th>If time permits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow recommended posted evacuation routes. Do not take shortcuts; they may be blocked. Do not use elevators, take the stairs.</td>
<td>Gather your disaster supply kit</td>
</tr>
<tr>
<td>Meet at the pre-established meeting area in the event of an emergency.</td>
<td>Unplug electric objects Any personal items</td>
</tr>
</tbody>
</table>

Basic Disaster Planning:

This is a recommendation and is not provided by the agency or division.

- Your kit should be in one container, and ready to “grab and go” in case you are evacuated from your workplace.
- Make sure you have food, water, and any other special items.
- Be sure to have comfortable walking shoes at your workplace in case an evacuation requires walking long distances.
- Disaster Supplies Kit Maintenance
  - Maintain your kit so they are safe to use when needed.
  - Change stored food and water supplies every six months, write the date you store it on all containers.
  - Re-think your needs every year and update your kit as your needs change.
  - Keep items in airtight plastic bags and put your entire disaster supplies kit in one or two easy-to-carry containers.

If an Emergency Occurs after hours, Report to:

<table>
<thead>
<tr>
<th>Primary Reporting Office:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alternate Reporting Office:</td>
</tr>
</tbody>
</table>

IT Disruption or Failure

After review of past catastrophic events, the most common issue is that most traditional communication methods such as cell phones, land line phones and computers are unusable. However, it is noted that a Blackberry and text messaging can work and should be utilized.
Use whatever is available, radio, media, hand written notes, scanners, hand held two way, satellite phones, police radios, and runners.

**Identification and coordination of responding staff, emergency workers, and contractors for emergency support**

The emergency response team and incident command structure has been identified and roles identified. For all other staff, when an incident occurs after work hours, each staff will report to the closest CA building and will assist the local office in meeting vital services unless directed otherwise. Incident command has a list of all FOSD staff, what area they are to report to, and will send communication or directions when necessary. A call tree system will be utilized as well, to determine who can come in, how they will get here, can they work from home, and what work spaces are safe.

**RECOVERY**

**Restoration of Services**

Service level will increase based on the severity of the event, and an increase in the availability of the workforce. FOSD has established training segments to increase the knowledge and understanding that it provided to the workforce on the road to restoration. Once vital services are addressed and continue, FOSD will re-establish and report to their designated position.

**EMERGENCY EVACUATION PLANNING**

**Alternate Facility**

a. In the event that CA Headquarters requires an EOC, it will be located at the Office Building 2, 1115 Washington St. SE. Olympia Washington. If OB2 is not functioning, the alternate location will be determined as conditions dictate, and may include a temporary structure in the gravel parking lot at 14th and Jefferson, Olympia Washington.

b. CA Executive staff will make the decision to relocate to the alternate facility. The EPRM will disseminate the information to department or section leaders. Agency staff will receive notice to report to the alternate facility via their individual department or section supervisor.

c. When relocating, supervisory staff will bring their Go-Kits to the alternate facility.

**EPRT EMERGENCY BINDER**

We have created EPRT Emergency Binders that includes this Emergency Management Plan, required forms, contact lists, and other references that would be useful in an emergency situation. Copies have been pre-positioned for use by the OSIC in the event of an emergency incident and are located with each member of the incident command team.

**TESTING AND EXERCISE**

The Division’s plan is based on best practice approach to test emergency continuity operation plans twice annually. This will include a written critique and evaluation utilized to make any necessary changes to improve emergency response readiness and effectiveness. FOSD will make any necessary revisions or updates as needed to this plan.
TRAINING

All Staff
- Staff will be trained as indicated by CA Management
- Existing staff will be trained on emergency response planning and their responsibilities as employees during an emergency or disaster event

Drills
- Exercises are tested the last Monday in May and August within the FOSD division to address emergency evacuation
- Employees will participate in any and all fire drills, and emergency evacuation exercises on a regular basis.

Emergency Response and Recovery Team Members and Management
- Will participate in initial FEMA training (IS-100 & IS-700)

Continuity of Operations Plan
Overview

The Division of Program and Practice Improvement activates its continuity plan when directed either by the Division Director, CA Assistant Secretary, or designees, when normal operations of the Division, or agency sub units are disrupted and can no longer follow usual procedures. The Division response plan provides policy support to the agency and affected areas and to the well being of onsite Division staff during an emergency.

During an emergency event P&PI may be adversely impacted. The magnitude of such an event may require varying degrees of action. An emergency event could impact this division, the entire agency, and local field offices including surrounding communities. In an attempt to identify, prepare for, respond to, and recover from an emergency or disaster, this plan outlines P&PI’s response framework. To ensure the agency can maintain its critical functions, this plan addresses operations, policy, and training to guide P&PI preparedness, response and recovery activities to support the local field offices. P&PI’s plan will provide efficient planning to utilize all available resources during an emergency and to ensure the continuity of operations of the agency in times of an emergency or disaster.

The following Emergency Response Plan for the Program and Practice Improvement Division is based on assumptions of a disaster at varying degrees and is outlined as:

- A natural, technological or human-caused disaster or emergency, that would have varying degrees of impact on the agency, the division and its systemic operations
- Portions of, or the entire agency facility may be inhabitable, and would require use of an alternate facility
- Vital agency functions will need to be carried out regardless of the extent of damage or impact of the emergency
- If a widespread disaster occurred, employees may need to take the appropriate steps to ensure the safety and security of their families prior to returning to work, and from a division/agency view this could have a negative impact on staff workload and possible re-assignment to more vital functions
- Possible disruptions in utility services including electricity, gas, telecommunications, water and cable
- Providers, county and local governments, and other state agencies that the agency normally interacts with may also be responding to the emergency, and may be experiencing some disruption in their agency operations as well
- Normal responder support and resources will likely not be available during and immediately after an event as they may be both victims and responders as well and resources likely stretched well beyond capacity

DIVISION MANAGEMENT

Activation

- The Division of Program and Practice Improvement activates its Emergency Response Plan when ordered either by the Division Director, CA Assistant Secretary, or designees, when normal operations of the Division, or agency sub units are disrupted and can no longer follow usual procedures. The Division response plan provides policy to support the agency and affected areas and to the well being of onsite Division staff during an emergency.
• The Division will test the Emergency Response Plan twice annually, the last Monday in May and August. This will include a written critique and evaluation. Changes will be made if and when necessary.

Emergency Preparedness, Response and Recovery Team (EPRT)

• P&PI has established an Emergency Preparedness, Response and Recovery Team (EPRT) for programs and identified vital services to provide direction to regional and field office staff regarding policy and training issues. P&PI has clearly identified a communication chain to notify and update P&PI staff in the event of an emergency. The worker safety committee has addressed worksite preparedness and emergency plans.
### Emergency Preparedness, Response and Recovery Team

**Program and Practice Improvement, OB 2, Children’s Administration**

**Facility and Program Type:** (identify all that apply)
- Residential (24 hr/7 day care) ☒
- Office ☐
- Warehouse or Shop ☐
- Staff access only ☐
- Staff and client access ☒
- Direct Client Interaction (in-person or by phone) ☐
- Other: (specify) ☐

**Plan Type:** Check appropriate box to describe the purpose of this emergency plan.
- Worksite ☐
- Facility Providing Residential Care ☒
- Office or facility (non-residential) 11 or more ☐
- Program ☒
- Administration Vital Service Plans ☐
- Support Plan ☐
- Specialized or Support Service Plans ☐
- Command Plan ☐
- Headquarters or Regional command only ☐

**Address:** 1115 WASHINGTON ST
**City:** Olympia
**County:** Thurston
**Region:** HQ

Incident Command System (ICS)

- The Incident Command Structure and responsibilities were developed and established based on P&PI's vital services and support to the regional and field offices. P&PI will provide guidance and support to regional and field offices regarding policies and training of new and existing staff to meet identified vital service requirements.
Levels of an Emergency and Relationship to Normal Functions

What is an emergency?
“Any physical event that interferes with the Department’s ability to conduct critical transactions or provide time critical services.” It is important to know, understand and prepare for the three levels of an emergency.

There is a wide range of emergencies that might effect:
- Facilities
- Access to facilities
- Single area within a building or on a campus
- Computer access to data
- Staff

Level 1
Minor
This is any serious situation that requires immediate actions, and is beyond the scope of day to day situations. This type of an emergency is considered minor in nature and can most likely be handled on the local level with notification and reporting to occur through normal channels.
- Estimated restoration time is one-shift to 24 hours
- Localized event to one building or campus
- Local response is adequate for reestablishing all systems
- Minor damage to hardware, software, electrical equipment or workspace areas
- Examples include: temporary power outages, or a small trash can fire

Level 2
Major
This is a serious situation in which the disruption is anticipated to be more significant than a minor event, but is less than a catastrophic event. It may be considered a major emergency even if only one site has issues, or is part of a co-located facility.
- Estimated restoration time is 24 to 72 hours
- Multiple buildings/offices/facilities affected by an event
- Damage to buildings/offices/facilities is more than minor in nature
- Replacement of equipment or facilities may be required
- Examples include: a severe, prolonged storm affecting numerous sites. Significant fire causing temporary closure of the building, or a significant computer virus or telecommunication losses

Level 3
Catastrophic
This is a catastrophic emergency in which disruption is anticipated to be in excess of 72 hours.
- Damage from a catastrophic emergency is severe
- May involve total destruction of a worksite
- Major replacement of equipment or restoration/renovation is required
- Staff are required to be relocated or not able to participate in normal activities
- Examples include: regional earthquake affecting transportation and communication, or a significant building fire.

Vital Services

In the event of an emergency CA staffing levels may be unable to meet many CA policies and time sensitive requirements that are outlined in policy. However CA will continue to attempt to provide vital services (Child Welfare Services, Child Protective Services and Medically Fragile) to children and youth at a level commensurate with available resources and will work to increase service capacity as the recovery process progresses and resources are shifted to support the affected area(s). Prioritize
protection of children from abuse and neglect and to maintain permanency in placements while attempting to provide vital services, priorities will be to:
   a. Child Welfare Services - Continue availability of services for children under state care or supervision
   b. Child Protective Services - Respond as appropriate to new child welfare cases
   c. Medically Fragile Children

POLICY OVERVIEW

Policies Adversely Impacted by Disaster

CA has identified ten key policy areas that would be adversely affected by a level 2 or 3 emergency. CA will release practice directives to field offices with the recommended practice changes in the event of a level 2 or 3 emergency. In the event of a level 1 emergency there will be no recommended practice directives, or alterations to CA policy and practices.

Identified policies:
   • Intake
   • 24 hr. Emergent referrals and contact
   • 72 hr. investigations and contact for non-emergent referrals
   • CHET 30 day assessments
   • 30 day visits for in dependency
   • Visits with children in out of home placements
   • Medical consent for treatment
   • FP licensing requirements and timelines
   • Medically Fragile children and youth
   • Documentation
## PRE-IDENTIFIED RECOMMENDATIONS FOR POLICIES ADVERSELY IMPACTED BY DISASTER CROSSWALK - A practice directive will address the below

Preventative Action Steps
One of the key components in planning for disaster in Washington State is to be able to locate children and youth during and after a disaster. The following is a practice directive and is designed to meet the federal requirements and to be in the best interest of the families we serve. In order to locate and communicate with families and caregivers the following needs to be collected and documented for:

- Children and youth
- Caregivers
- Birthparents

Requirements for Children and Youth:
Within one week of OPD, the assigned social worker will document and record during the initial visit:

- Picture of youth
- Height and weight

This information will be:

- Placed in an envelope in the front of the most current binder of the hard copy file
- Recorded into FamLink in a case note
- This information and process will be updated and recorded every 6 months
- The picture will be scanned and saved to the regional or local share drive
  - Once a month, each office will be responsible to save the pictures on the regional or local share drive to a CD, which is placed in the office “go kit”

Requirements for Caregivers (licensed placements and relative placements):
The assigned DLR social worker (licensed placements) or the assigned social worker (relative placements) will document and record during the initial licensing process/home visit:

- Caregiver name
- Address, current and emergency
- Phone, current and emergency

This information will be:

- Recorded in the Provider Record in FamLink

The assigned social worker will:

- Update and record this information every 6 months

Requirements for birth parents (will be available after FamLink implementation):
The assigned social worker will document and record during the initial visit:

- Name

During a level 2 or 3 emergency, it is highly unlikely that CA staff would have access to operational equipment such as a computer, or to specific computer programs that are utilized to document intake reports and records such as FamLink. It is recommended that in those situations, when possible that a laptop be utilized by staff. If this is not available or other electronic equipment, then documentation will be hand written with accuracy and clarity. If there is limited access to computer equipment, all hand written documentation will be entered by a designated staff that will be responsible to transcribe and enter intake reports and social worker’s hand written notes. Not only is it important to ensure the safety and well being of children and youth served by CA, it is equally important to document the status of cases and actions taken.
Address, current and emergency
Phone, current and emergency
This information will be:
- Recorded on the family face sheet
- Record in FamLink
The assigned social worker will:
- Update and record this information every 6 months

TRAINING OVERVIEW

In addition to identifying 10 key policies, P&PI has developed training for existing, and new staff to meet the needs of the children and youth we serve in the event of level 2 or 3 emergencies. Training for foster parents will be developed and will be implemented for new and existing foster parents as well. This training will enable staff to:

- Identify, locate, and continue available services for children under state care or supervision who are displaced or adversely affected by a disaster
- Respond as appropriate to new child welfare cases in areas adversely affected by a disaster, and provide service in those cases
- Remain in communication with caseworkers and other essential child welfare personnel who are displaced because of a disaster
- Coordinate/share information with other states and intrastate agencies
- Provide in-home family services, when necessary and appropriate
- Protection of children from abuse and neglect
- Maintain permanency in placements
- Sustain mental health, substance abuse, and emotional/behavioral services

When possible, implementation will commence within 72 hours of the emergency event. The training is to be implemented by CA staff trainers who will be prepared with training packets and will mobilize, go to the field offices and provide on–site training. If CA trainers are unable to mobilize, regions will be responsible to train staff located in their area with training packets previously provided to them.

This training is 3.5 hours and covers the very basic roles/responsibilities that staff will need to know to complete vital services. It will provide information to complete: intake reports, interviews, provide services and documentation for children at risk of child abuse and neglect, and children in out of home placement.

COMMUNICATION
Emergency Communications (EC)

The following communication requirements and considerations will assist in establishing and maintaining adequate internal and external communications during an emergency situation.

There are various communication needs when an emergency occurs, both internally, at the site of the incident, and across the division and agency.

Depending on the magnitude of the event, communication needs and methods will vary.

Assumptions
- Loss of communication systems (telephone, cellular phones, pagers, email) will occur as a result of a disaster or emergency situation.
- 911 systems can be disabled due to a catastrophic community incident that results in line congestion, or loss of power, or telephone services.
- Alarm and other protection systems (security, fire, electronic door controls) may fail during a disaster. Systems can either fail open, or closed dependent on the system. Alternative plans for manual operation need to be identified.
- Telephone systems (switchboards, voice messaging, digital phone lines) will fail in a power outage if no back-up emergency generator supports them.
- Some back-up emergency power systems for telephone switches and computer systems are battery based and therefore may have limited support of only a few hours.
- In a large disaster, local and national media (radio, television, internet) may be a source of information both pre and post event but may broadcast unreliable information.

Emergency Go-Kits
CA, P&PI will use Emergency Go-Kits to support the Division’s response. When possible, data will be stored on a CD and updated on a bi-weekly basis. Upon evacuation, each department / section leader is to bring the Go-Kit to the alternate facility and make the necessary preparations and staff assignments to use the contents of the go-kits.

The Go-Kits will contain:
- Contact information:
- Management, P&PI Staff, Regional, Local office
- Communication devices, with appropriate back up batteries:
- Lap top
- Black berry or cell phone
Communication Strategies
Distribution to staff and managing transmission traffic and channel designation

STAFF COMMUNICATION AND NOTIFICATION

Essential staff notification
A determination of essential staff for emergency response, roles, and responsibilities has been identified, and is updated on a monthly basis. This includes after-hours personal contact information: name, address, home phone/cell. Notification via the Critical Response Team.

All staff notification
Contact information is private and confidential and is only made available when deemed necessary and appropriate. The all staff after-hours list includes: name, area, home phone/cell and reporting facility and is available alphabetical or by area. When an emergency occurs after-hours this list and call tree will be accessed. P&PI staff is aware of their alternate reporting facility and will be instructed to do so at the time of the emergency and call tree notification system. Notification occurs by a pre-identified call up list, which is updated monthly. During regular scheduled working
hours, staff are to remain at their station until directed otherwise to other locations deemed necessary by the incident commander.

Emergency Notification (Pre-Incident Warning):
In a large scale disaster, local and national media may be a notification resource. The Washington State Emergency Management Division notifies the DSHS Emergency Management Coordinator for predicted emergencies, such as: severe storm, volcano, and tsunami, terrorist attack. The Coordinator notifies impacted facilities or programs. The Assistant Secretary for Children’s Administration will coordinate with the DSHS Emergency Support Team (EST) for all communications during and after an emergency. The incident commander or identified individual will notify P&PI staff in the event of an emergency followed by specific directives.

Emergency Response
Communication with people designated as first responders (police, fire, and internal response teams) who can respond immediately and are trained and prepared to offer assistance in the areas needed.

911
- The most reliable system is your local 911. This allows the most direct and time efficient response by trained emergency personnel. This system is your first choice for emergencies with injuries, fire related, crime related, or major building or property damage, etc. Enhanced 911 systems are designed to automatically identify the physical location (at the phone location) of the caller and most counties have enhanced 911 systems. Individual phone systems in some facilities may not have this capability, and response will be to the site address.

Alternate Communication Methods
- Although reliable, 911 systems can be disabled due to a catastrophic community incident causing line congestion, loss of telephone services, blocked roads, reduced emergency personnel, etc. Back-up systems to consider are:
  - Staff should be prepared to survive in place with no external emergency responders. Specific staff have been trained and are available on site that can provide basic first aid, CPR and initial limited care.

**EMERGENCY PLANNING AND RESPONSE**

**Recommended Safety Skills:**
- Know who on the floor is certified in First Aid and CPR.
- Learn how to use a fire extinguisher and know where it is located.
During work hours:
Evacuation Guidelines

<table>
<thead>
<tr>
<th>Always</th>
<th>If time permits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Follow recommended posted evacuation routes. Do not take shortcuts; they may be blocked. Do not use elevators, take the stairs.</td>
<td>Gather your disaster supply kit</td>
</tr>
<tr>
<td>Meet at the pre-established meeting area in the event of an emergency.</td>
<td>Unplug electric objects Any personal items</td>
</tr>
</tbody>
</table>

Recommended Basic Disaster Supplies for Work:
This is a recommendation and is not provided by the agency or division.
- Your kit should be in one container, and ready to "grab and go" in case you are evacuated from your workplace.
- Make sure you have food, water, and any other special items.
- Be sure to have comfortable walking shoes at your workplace in case an evacuation requires walking long distances.
- Disaster Supplies Kit Maintenance
  - Maintain your kit so they are safe to use when needed.
  - Change stored food and water supplies every six months, write the date you store it on all containers.
  - Re-think your needs every year and update your kit as your needs change.
  - Keep items in airtight plastic bags and put your entire disaster supplies kit in one or two easy-to-carry containers.

IT Disruption or Failure
After review of past catastrophic events, the most common issue is that most traditional communication methods such as cell phones, land line phones and computers are unusable. However, it is noted that a Blackberry and text messaging can work and should be utilized. Use whatever is available, radio, media, hand written notes, scanners, hand held two way, satellite phones, police radios, and runners.

Identification and coordination of responding staff, emergency workers, and contractors for emergency support
The emergency response team and incident command structure has been identified and roles identified. For all other staff, when an incident occurs after work hours, each staff will report to the closest CA building and will assist the local office in meeting vital services unless directed otherwise. Incident command has a list of all P&PI staff, what area they are to report to, and will send communication or directions when necessary. A call tree system will be used as well, to determine who can come in, how they will get here, can they work from home, and what work spaces are safe.

RECOVERY

Restoration of Services
Service level will increase based on the severity of the event, and an increase in the availability of the workforce. P&PI has established training segments to increase the knowledge and understanding that it provided to the workforce on the road to restoration. Once vital services are addressed and continue, P&PI will re-establish and report to their designated position.
**EMERGENCY EVACUATION PLANNING**

**Alternate Facility**

a. In the event that CA Headquarters requires an EOC, it will be located at the Office Building 2, 1115 Washington St. SE. Olympia Washington. If OB2 is not functioning, the alternate location will be determined as conditions dictate, and may include a temporary structure in the gravel parking lot at 14th and Jefferson, Olympia Washington.

b. CA Executive staff will make the decision to relocate to the alternate facility. The EPRM will disseminate the information to department or section leaders. Agency staff will receive notice to report to the alternate facility via their individual department or section supervisor.

c. When relocating, supervisory staff will bring their Go-Kits to the alternate facility.

**PLAN MAINTENANCE**

The Division’s plan is based on best practice approach to test emergency continuity operation plans twice annually. This will include a written critique and evaluation used to make any necessary changes to improve emergency response readiness and effectiveness. P&PI will make any necessary revisions or updates as needed to this plan.

**TRAINING**

**P&PI Staff**

- Staff will be trained on emergency response planning and their responsibilities as employees during an emergency or disaster event

**Drills**

- Exercises will be on an annual basis.
- Employees will participate in any and all fire drills, and emergency evacuation exercises on a regular basis.

**Emergency Response and Recovery Team Members and Management**

- Will participate in initial FEMA training (IS-100 & IS-700)

CONTINUITY OF OPERATIONS
Field Operations Overview

Field Operations (FO) activates its continuity plan when directed either by the Director of Field Operations, CA Assistant Secretary, or designees, when normal operations of the Division or agency sub-units are disrupted and can no longer follow usual procedures. The Division response plan provides operational support to the field and affected areas and to the well being of onsite Division staff during an emergency.

During an emergency event Field Operations may be adversely impacted. The magnitude of such an event may require varying degrees of action. An emergency event could impact this Division, the entire agency, and local field offices as well as surrounding communities. In an attempt to identify, prepare for, respond to, and recover from an emergency or disaster, this plan outlines Field Operations’ response framework. To ensure the agency can maintain its critical functions, this plan addresses operations, policy, and training to guide FO’s preparedness, response and recovery activities to support the local field offices. Field Operations’ plan will provide efficient preparation to utilize all available resources during an emergency and to ensure the continuity of operations of the agency in times of an emergency or disaster.

The following Emergency Response Plan for FO is based on assumptions of a disaster at varying degrees and is outlined as:

- A natural, technological or human-caused disaster or emergency which would have varying degrees of impact on the agency, the Division and its systemic operations.
- Portions of, or the entire agency facility may be inhabitable, and would require use of an alternate facility.
- Vital agency functions will need to be carried out regardless of the extent of damage or impact of the emergency.
- If a widespread disaster occurred, employees may need to take the appropriate steps to ensure the safety and security of their families prior to returning to work, and from a Division/agency view this could have a negative impact on staff workload and possible re-assignment to more vital functions.
- Possible disruptions in utility services including electricity, gas, telecommunications, water and cable.
- Providers, county and local governments, and other state agencies that FO normally interacts with may also be responding to the emergency, and may be experiencing some disruption in their agency operations as well.
- Normal responder support and resources will likely not be available during and immediately after an event as they may be both victims and responders as well and resources likely stretched well beyond capacity

DIVISION MANAGEMENT

Activation

- The Division of Field Operations activates its Emergency Response Plan when ordered either by the Division Director, CA Assistant Secretary, or designees, when normal operations of the Division or agency sub-units are disrupted and can no longer follow usual procedures. The FO response plan provides operational support to the agency and affected areas and to the well being of onsite Division staff during an emergency.

- The Division will test the Emergency Response Plan once annually, the last Monday in March. This will include a written critique and evaluation. Changes will be made if and when necessary.
Emergency Planning and Response Team (EPRT)

- Field Operations has established an Emergency Preparedness, Response and Recovery Team (EPRT) for programs and identified vital services to provide direction to regional and field office staff regarding operation.

- Field Operations has clearly identified a communication chain to notify and update FO staff in the event of an emergency. The worker safety committees in regions and local offices have addressed worksite preparedness and emergency plans.

Emergency Response and Recovery Team Members and Management

- Will participate in initial FEMA training (IS-100 & IS-700)
  http://www.training.fema.gov/EMIWeb/IS/crslist.asp

Appendix: (1B) Continuity of Operations Plan Attachment 8

June 30, 2009
Incident Command System (ICS)

- The Incident Command Structure and responsibilities were developed and established based on Field Operation’s vital services and support to the regional and field offices. Field Operations will provide guidance and support to regional and field offices regarding client contact, foster parent contact, staff contact, community responders, emergency call centers, and interstate compact to meet identified vital service requirements.

Field Operations Division Incident Command System
LEVELS OF AN EMERGENCY AND RELATIONSHIP TO NORMAL FUNCTIONS

What is an emergency?

"Any physical event that interferes with the Department’s ability to conduct critical transactions or provide time-critical services.” It is important to know, understand and prepare for the three levels of an emergency.

There is a wide range of emergencies that might affect:
- Facilities
- Access to facilities
- Single area within a building or on a campus
- Computer access to data
- Staff

Level 1
Minor

This is any serious situation that requires immediate actions, and is beyond the scope of day to day situations. This type of an emergency is considered minor in nature and can most likely be handled on the local level with notification and reporting to occur through normal channels.

- Estimated restoration time is one-shift to 24 hours
- Localized event to one building or campus
- Local response is adequate for reestablishing all systems
- Minor damage to hardware, software, electrical equipment or workspace areas
- Examples include: temporary power outages, or a small trash can fire

Level 2
Major

This is a serious situation in which the disruption is anticipated to be more significant than a minor event, but is less than a catastrophic event. It may be considered a major emergency even if only one site has issues, or is part of a co-located facility.

- Estimate restoration time is 24 to 72 hours
- Multiple buildings/offices/facilities affected by an event
- Damage to buildings/offices/facilities is more than minor in nature
- Replacement of equipment or facilities may be required
- Examples include: a severe, prolonged storm affecting numerous sites. Significant fire causing temporary closure of the building, or a significant computer virus or telecommunication losses

Level 3
Catastrophic

This is a catastrophic emergency in which disruption is anticipated to be in excess of 72 hours.

- Damage from a catastrophic emergency is severe
- May involve total destruction of a worksite
- Major replacement of equipment or restoration/renovation is required
- Staff are required to be relocated or not able to participate in normal activities
- Examples include: regional earthquake, storm or flood affecting transportation and communication, or a significant building fire.
POLICY OVERVIEW

Vital Services
In the event of an emergency CA staffing levels may be unable to meet many CA policies and time sensitive requirements that are outlined in policy. However CA will continue to attempt to provide vital services to children and youth at a level commensurate with available resources and will work to increase service capacity as the recovery process progresses and resources are shifted to support the affected area(s). Priorities will be:

a. Protection of children from abuse and neglect and maintaining permanency in placements
b. Continue availability of services for children under state care or supervision
c. Respond as appropriate to new child welfare cases
d. Support emergency licensing, current placement resources

Policies Adversely Impacted by Disaster
CA has identified ten key policy areas that would be adversely affected by a level 2 or 3 emergency. In the event of a level 1 emergency there will be no recommended policy changes, or alterations to CA policy and practices.
Identified policies:
• Intake
• 24 hr. Emergent referrals and contact
• 72 hr. investigations and contact for non-emergent referrals
• CHET 30 day assessments
• 30 day visits for children in dependency status
• Visits with children in out of home placements
• Medical consent for treatment
• FP licensing requirements and timelines
• Medically Fragile children and youth
• Documentation

Practice directives for nine of the above policies can be found in the Program & Practice Improvement program plan. Field Operations develops policy and WACs regarding minimum licensing requirements. The practice directive for Foster Parent Licensing is:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>FP licensing requirements</td>
<td>Foster parents and other residential facilities are required to comply with all minimum licensing requirements as per RCW and WAC</td>
<td>Staff will be available to assist foster parents and other residential facilities to remediate temporary deficiencies. Staff will be required to develop waivers or administrative approvals as needed</td>
</tr>
<tr>
<td>and time frames</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Preventative Action Steps
In an effort to keep kids safe and to be able to locate youth with ease Field Operations has identified preventive action steps.

Actions that need to be initially gathered then updated and completed every 6 months for current caregivers:
• List of name, current address, telephone (home, cell, work), e-mail for all placement resources (foster homes, relatives, adoptive and residential providers) as applicable. Emergency contact phone numbers for foster parents and relative caregivers will be gathered when required (see Program & Practice Improvement plan, Requirements for Caregivers).

Actions that need to be initially gathered then updated and completed every 12 months:
• Correspondence to all private child-placing agencies, with updated list of contact numbers in case of an emergency.

In preparation for a disaster, field staff will have access to client data, including contact information for foster parents and relative caregivers, through CAMIS/FamLink reports distributed through central file servers, websites, CD, and/or hard copy.

COMMUNICATION
Emergency Communications (EC)

There are various communication needs when an emergency occurs, both internally, at the site of the incident, and across the Division and agency. Depending on the magnitude of the event, communication needs and methods will vary. The following communication requirements and considerations will assist in establishing and maintaining adequate internal and external communications during an emergency situation.

Regular emergency updates as to facilities, capacity, well being of staff and clients should occur in both directions, field office to region, region to HQ, HQ to region and region to field office.

Assumptions
• Loss of communication systems (telephone, cellular phones, pagers, email) will occur as a result of a disaster or emergency situation.
• 911 systems can be disabled due to a catastrophic community incident that results in line congestion, or loss of power, or telephone services.
• Alarm and other protection systems (security, fire, electronic door controls) may fail during a disaster. Systems can either fail open, or closed dependent on the system. Alternative plans for manual operation need to be identified.
• Telephone systems (switchboards, voice messaging, digital phone lines) will fail in a power outage if no back-up emergency generator supports them.
• Some back-up emergency power systems for telephone switches and computer systems are battery based and therefore may have limited support of only a few hours.
• In a large disaster, local and national media (radio, television, internet) may be a source of information both pre and post event but may broadcast unreliable information.
Communication with people designated as first responders (police, fire, and internal response teams) who can respond immediately and are trained and prepared to offer assistance in the areas needed.

**911**
The most reliable system is your local 911. This allows the most direct and time efficient response by trained emergency personnel. This system is your first choice for emergencies with injuries, fire related, crime related, or major building or property damage, etc. Enhanced 911 systems are designed to automatically identify the physical location (at the phone location) of the caller and most counties have enhanced 911 systems. Individual phone systems in some facilities may not have this capability, and response will be to the site address.

**Alternate Communication Methods**
Although reliable, 911 systems can be disabled due to a catastrophic community incident causing line congestion, loss of telephone services, blocked roads, reduced emergency personnel, etc. Back-up systems to consider are: Staff should be prepared to survive in place with no external emergency responders. Specific staff have been trained and are available on site that can provide basic first aid, CPR and initial limited care.

**Communication with Licensed Foster Homes and Contracted Providers**
Ensure that the necessary protocols are in place to communicate with foster homes and contracted providers, in preparation for an emergency event. This should include regionally identified liaisons that are included in the list of key individuals for emergency operations centers. Likewise, the Division Director, or designee, will insure minimum licensing and WAC (Washington Administrative code) requirements for foster homes, staffed residential homes/facilities include requirements for emergency preparedness planning and provision.
## Communication Strategies

### Primary: Distribution to staff and managing transmission traffic and channel designation

<table>
<thead>
<tr>
<th>Problem Area</th>
<th>Comment</th>
<th>Pre-Event</th>
<th>Event</th>
</tr>
</thead>
</table>
| **Analog phone lines:**  
Not dependent on local electrical power | Maintain at least two back-up analog phone lines for PC and phone (one line for critical command related communications and the other line for other contacts) | Ensure lines are available, and location is known | |
| **Non-electric telephone:** | Maintain at least two old fashion dial or pulse type (not tonal) phones to use with the analog lines. | Ensure lines are available, and location is known | |
| **Cellular Phones and Blackberries:**  
Unreliable in major disasters due to access congestion. | Text messaging will work, not voice. | On going phone battery maintenance will occur | To preserve battery life, staff will turn phones on, on the top of the hour for 15 min. |
| **Satellite Phones:**  
Most consistently reliable telephones in major catastrophic disasters. They are not affected by cellular traffic. | Trained staff are required for phone set-up and use, device can be challenging with location limitations and set up | On going phone battery maintenance will occur | To preserve battery life, staff will turn phones on, on the top of the hour for 15 min. |
| **Primary services:**  
State e-mail systems failed | "Hotmail" e-mail accounts | Obtain an exception to current policy 15.15 B.3. (h-j), Give access to key staff | |
| **WiFi**  
Remote access to e-mail, and systems : | PDA can connect to the Internet when in proximity of an hot spot | Battery pack  
Locate Wi-Fi region or hot spot | |
| **Runners:**  
Runners are used when all other communication systems fail | Staff designated to provide delivery of messages, instructions, supplies, etc. to affected areas or staff | Check-in areas for staff;  
Designate vehicles in advance; runners are used when all other communication systems fail | |

### Emergency Go-Kits

**CA, Field Operations** will utilize Emergency Go-Kits to support the Division’s response. When possible, data will be stored on a CD and updated regularly. Upon evacuation, each department / section leader is to bring the Go-Kit to the alternate facility and make the necessary preparations and staff assignments to utilize the contents of the Go-Kits. The Go-Kits will contain:
- Contact information for staff: Management, Field Operations, Regional and Local Office
- Communication devices, with appropriate back up batteries: lap top, blackberry or cell phone, pager
STAFF COMMUNICATION AND NOTIFICATION

Essential Staff Notification
A determination of essential staff for emergency response, roles, and responsibilities has been identified, and is updated on a monthly basis. This includes after-hours personal contact information: name, address, home phone/cell. Notification via the Critical Response Team.

All Staff Notification
Contact information is private and confidential and is only made available when deemed necessary and appropriate. The all staff after-hours list includes: name, area, home phone/cell and reporting facility and is available alphabetical or by area. When an emergency occurs after-hours this list and call tree will be accessed. Field Operations staff are aware of their alternate reporting facility and will be instructed to do so at the time of the emergency and call tree notification system. Notification occurs by a pre-identified call up list, which is updated monthly. During regular scheduled working hours, staff are to remain at their station until directed otherwise to other locations deemed necessary by the incident commander.

Emergency Notification (Pre-Incident Warning):
In a large scale disaster, local and national media may be a notification resource. The Washington State Emergency Management Division notifies the DSHS Emergency Management Coordinator for predicted emergencies, such as: severe storm, volcano, and tsunami, terrorist attack. The Coordinator notifies impacted facilities or programs. The Assistant Secretary for Children’s Administration will coordinate with the DSHS Emergency Support Team (EST) for all communications during and after an emergency. The incident commander or identified individual will notify Field Operations staff in the event of an emergency followed by specific directives.

EMERGENCY RESPONSE

Intake and Call Center Procedures

Central Intake Functions (Minor & Major)

Central Intake After Hours (CIAH) social workers that cannot get to their “home office” (Central Intake, King street building) because of inclement weather or minor disaster will call a central message information line in order to obtain updated information regarding the emergency plan in effect and where they are to be deployed.

Example of Message Line:  You have reached the King Street Building’s Central Intake After Hours Seattle office information line updated at 4:40 p.m. on Thursday August 16, 2007. Any changes to the work schedule and location due to weather or special circumstances will be posted to this line as needed. An emergency plan is not currently activated. Thank you for calling.

If the message line has been activated for inclement weather, the message will say: You have reached the King Street Building’s Central Intake After Hours Seattle office information line updated at 4:40 p.m. on Thursday August 16, 2007. An inclement weather emergency plan is currently activated. Employees who are unable to report to the CIAH office are to report to their designated inclement weather station. After arrival please report in to the duty supervisor by dialing, (206) 341-7377.

Once the Central Intake Area Administrator or designee determines that the situation is too dangerous for CIAH social workers to commute to work from a particular region, the Central Intake Area Administrator will first attempt to find coverage for staff who are unable to come in. If it is determined that minimal staffing levels cannot be maintained due to inclement weather or minor disaster, the Office Chief for Central Services will contact the Area Administrator in the local office to inform them that a CIAH social worker (s) will be coming into their local out station office and will need access to the building.

Minimum staffing levels are deemed to be:

- Eight intake specialists Monday through Friday swing shift
- Four intake specialists for weekend day and swing
- Five intake specialists for Friday and Saturday swing shifts
- One intake specialist for graveyard shift.

The Central Intake Area Administrator or designee will inform the alternate office that staff are being deployed to their office, including the names of staff who will be in their office and for how long. Once the CIAH social workers can return to the CI office building, the Central Intake Area Administrator will call the office Area Administrator to inform them the office is clear so they may secure the building.

Pre-identified designated field offices can house a minimum of two or more CI employees. Work stations will be assigned in a pre-designated work area and worker profiles will be set up for efficient access to folders and documents on the network. Employees will report the number where they can be located to CIAH, and calls will be patched through accordingly.

One worker or supervisor will be identified to act as the lead in order to maintain calls, employee whereabouts, security, and so forth. The supervisor will be identified on the message line.

Each employee will have a current staff phone roster available. If employees are “sheltering in place” at the Central Intake office, air beds, fleece blankets, cooking materials, food and water are available.
Central Intake is a 24/7 operation, which involves the handling of all CA intake calls in accordance with RCW 26.44. In the event the building must be evacuated for short term the following procedures in regard to the phones will take place:

- The Duty Supervisor will ensure the phones are re-routed through World Class Communications for short-term issues, such as a fire drill or bomb threat. Short-term is defined as anything less than four hours. Re-routing the phones is accomplished by dialing into the Disaster Hunt Group through two locations, duty sup office 7377 and the NCIC Access Unit supervisor's desk at 7349. For immediate access, one office is located on each end of the floor.

- Underneath the phone will be index card instructions which state the following:
  Pick up the phone at the duty station 7377and dial *560787377 or Station 7349 and dial *560787380
  A light will come on your button "d"

  **Leave the building**

  When you return to the building, go to back to the **same** station 7377 or 7349
  Pick up the phone and dial *5778
  The light on button “d” will go out and then test the system by calling our 1-800-562-5624.

- Staff will be deployed to pre-designated buildings for longer-term outages.

- Notify the on call manager and the building owner, Representative: Jacob Connell, office number (425) 453-7534, cellular, (206) or (425) 401-9634. Owner, Darryl Connell, home # (425) 641-8624.

In cases of minor to major disaster and evacuation the central information line will be updated accordingly. Example: You have reached the King Street Building's Central Intake After Hours Seattle office information line updated at 4:40 p.m. on Thursday August 16, 2007. An emergency plan is currently activated. The King Street CI AH building is not accessible due to (emergency event). Employees are to report to their designated emergency plan alternate work station. After arrival employees are to call 1800-562-5624 to report in.

**Catastrophic Disasters**

In preparation for certain Level 2 (major) and all Level 3 (catastrophic) emergency events, Children’s Administration has identified methods to continue the delivery of vital services and procedures to redeploy staff affected by the emergency event.

If a catastrophic disaster affects significant areas in Washington, CA employees’ individual safety and the safety of their families are of primary concern and are the initial focus of that employee. Central Intake staff and regional and local office staff will be deployed as needed to staff pre-identified emergency call centers.

Whenever possible, employees will be deployed to an alternate office that is within their realm of natural supports or may travel to the nearest available functioning emergency call center.

A Reconnecting Families hotline, 1-866-940-DSHS (3747), was created for displaced caregivers so they know how to reach the agency if they are unable to contact their social workers or licensors. This enables the Children’s Administration to track where children under the care and supervision of the State of Washington are located and to provide necessary supports and services.

CA has established emergency call centers to receive calls coming into the Reconnecting Families hotline and the END HARM child abuse and neglect reporting hotline, as well as calls redirected from
offices closed by the emergency event. Seattle Central Intake has been identified as the primary emergency call center to receive these calls. However, if Central Intake has been disabled, the calls will be redistributed based on which offices are least affected by the disaster and phone line (trunk) capacity. These pre-identified emergency call centers are:

- Seattle (Central Intake)
- Lynnwood
- Tacoma
- Spokane
- Yakima
- Tumwater
- Vancouver
- Kent

Emergency call centers will have access to client data reports, including contact information for foster and relative caregivers, distributed through central file servers, websites, CD, and/or hard copy. If CAMIS/FamLink is unavailable, the reports can be used to log caregivers’ current location and needs.

The DSHS Children’s Administration and Information Systems Services Division, the Department of Information Services, and X5 Solutions (vendor) have created an X5 disaster recovery plan (complete plan is located in the incident command book). Included in the plan is an auto call distribution to the emergency call centers. X5 Solutions has identified three emergency scenarios:

A. Seattle Primary Active Only: all calls routed to Central Intake
B. Seattle Primary Out of Service: all calls routed to the seven other offices, or those that are unaffected.
C. Other: undefined emergency plan, X5 Solutions, ISSD and the CA Office Chief for Central Services will collaborate to determine the course of action.
Procedures for activating the X5 disaster recovery plan: The Office Chief for Central Services, or designee, will notify X5 Solutions that a disaster has occurred and will confirm which pre-defined disaster recovery plan needs to be implemented. The recovery plan can typically be implemented anywhere from fifteen to thirty minutes. If X5 detects a loss of service, they immediately initiate steps to rectify the problem and alert the Office Chief. Non-essential incoming DSHS calls may be suspended to allow line capacity.

X5 Solutions will keep the disaster recovery plan in place until the Office Chief, or designee, notifies them to move phone traffic back to normal routing patterns. X5 Solutions, CA, and DSHS ISSD meet yearly to ensure that plans are up to date.

Emergency Operations Center (EOC)

Field Operations Headquarters

a. In the event that CA Headquarters requires an EOC, it will be located at the Office Building 2, 1115 Washington St. SE. Olympia Washington. If OB2 is not functioning, the alternate location will be determined as conditions dictate, and may include a temporary structure in the gravel parking lot at 14th and Jefferson, Olympia Washington.
b. CA Executive staff will make the decision to relocate to the alternate facility. The incident commander will disseminate the information to department or section leaders. Agency staff will receive notice to report to the alternate facility via their individual department or section supervisor.
c. When relocating, supervisory staff will bring their Go-Kits to the alternate facility.

Sharing Information with Child Welfare Agencies in Other States
The Washington Interstate Compact for the Placement of Children (ICPC) facilitates child placements between states. If the child is a Washington state resident going to live in another state, it is considered an “outgoing case.” If the child is moving to Washington State from another state, it is considered an “incoming case.” The following protocols have been developed for Washington ICPC cases:

Outgoing cases: When it becomes apparent that there has been a major disaster in another state, which may impact Washington children placed in another state:
1. The Washington ICPC office will e-mail all Washington State Children’s Administration staff, notifying them that there has been a major disaster in another state. The notification will include instructions about making contact with the caregivers for Washington children in that state.
2. The assigned social worker should immediately try to make contact with the child’s caregiver. The social worker should assess the child’s condition, location and needs.
3. The assigned social worker will notify the ICPC office within 2 working days, if child is in an affected state.
4. Washington ICPC will coordinate communication with other states regarding emergency response.

Incoming cases: When it becomes apparent that there has been a major disaster in Washington State that affects children from other states who are placed in Washington:
1. Washington State social workers will inform ICPC caregivers of the toll free number to contact in case of a disaster when the placement begins. The script for staff answering the phone line will include questions about whether the child is from another state and if so which state they are from.
2. The ICPC office will coordinate communication with Washington social workers and other states regarding the emergency response.
EMERGENCY PLANNING

Recommended Safety Skills:
- Know who on the floor is certified in First Aid and CPR.
- Learn how to use a fire extinguisher and know where it is located.

Basic Disaster Supplies for Work
This is a personal recommendation and is not provided by the agency or Division.
- Your kit should be in one container, and ready to “grab and go” in case you are evacuated from your workplace.
- Make sure you have food, water, and any other special items.
- Be sure to have comfortable walking shoes at your workplace in case an evacuation requires walking long distances.
- Disaster Supplies Kit Maintenance
  - Maintain your kit so they are safe to use when needed.
  - Change stored food and water supplies every six months, write the date you store it on all containers.
  - Re-think your needs every year and update your kit as your needs change.
  - Keep items in airtight plastic bags and put your entire disaster supplies kit in one or two easy-to-carry containers.

</tbody>
</table>
IT Disruption or Failure
After review of past catastrophic events, the most common issue is that most traditional communication methods such as cell phones, land line phones and computers are unusable. However, it is noted that a Blackberry and text messaging can work and should be utilized. Use whatever is available, radio, media, hand written notes, scanners, hand held two way, satellite phones, police radios, and runners.

RECOVERY

Restoration of Services
Service level will increase based on the severity of the event, and an increase in the availability of the workforce. Field Operations has established training segments to increase the knowledge and understanding that it provided to the workforce on the road to restoration. Once vital services are addressed and continue, Field Operations will re-establish and report to their designated position.

PLAN MAINTENANCE

The Division’s plan is based on best practice approach to test emergency continuity operation plans twice annually. This will include a written critique and evaluation utilized to make any necessary changes to improve emergency response readiness and effectiveness. Field Operations will make any necessary revisions or updates as needed to this plan.

TRAINING AND DRILLS

All Staff
- Staff will be trained at regional New Employee Orientation or as indicated by CA Management
- Existing staff will be trained on emergency response planning and their responsibilities as employees during an emergency or disaster event

Drills
- Exercises are tested the last Monday in March within the Field Operations Division to address emergency evacuation
- Employees will participate in any and all fire drills, and emergency evacuation exercises on a regular basis.
