

CROSS COUNTY FACTS:

- ▶ Resident County = county where client resides.
- ▶ Service County = county where client receives services.
- ▶ Resident County can output billing information for any service type. If the resident county does not select a particular provider, the output billing will include clients receiving services from another county's service provider (service county). This would mean that the resident county could send the service provider the output billing information to be completed.
- ▶ Service County with service provider can output billing information for a chosen service provider and service type and the output information will include that client who is a resident of another county. This would mean the service county where the service provider provides services could output billing information to be completed.
- ▶ Resident County is responsible for uploading completed CMIS provider spreadsheet information since the client's money resides at the resident county.

COUNTY CMIS CHECK LIST

- All Cross County agreements are formally in place? (Formal agreements should outline what is expected from whom and who performs what).

Is it understood what county is paying the provider?

Is it understood how reimbursement between counties will occur?
