## **Trial Data Sheet**

Instructions: Identify a target skill being taught. Have the individual practice that skill 10 times. Record whether the individual performed the skill correctly (+) or whether the individual required assistance/performed the skill incorrectly (-) in each trial box. Once 10 trials have been attempted, divide the number of correct trials by the number of total trials (10). That number will give you the percentage correct.

Person Being Observed:

Person Recording Observation:

Target Skill:

Target Goal:

Date	Trial 1	Trial 2	Trial 3	Trial 4	Trial 5	Trial 6	Trial 7	Trial 8	Trial 9	Trial 10	Percentage Correct

## **Trial Data Sheet**

Instructions: Identify a target skill being taught. Have the individual practice that skill 10 times. Record whether the individual performed the skill incorrectly (+) or whether the individual required assistance/performed the skill incorrectly (-) in each trial box. Once 10 trials have been attempted, divide the number of correct trials by the number of total trials (10). That number will give you the percentage correct.

Materials Needed: Teaching tools or materials for that skill.

\*Can the individual perform skill across different DAYS? PEOPLE? ENVIRONMENTS?
