How do we know that prevention works?

Parents and others in their communities play a vital role in influencing young people. Evidence-based prevention practices have also been proven to reduce drug use and public spending on its consequences (Washington State Institute for Public Policy). CPWI communities receive funding for evidence-based programs for youth and families, and changing community norms to reduce risk factors (such as early first use of drugs) and increase protective factors (such as youth who feel connected to their families, school and peers).

The Washington State Healthy Youth Survey (HYS) allows us to monitor the health of students, evaluate the impact of our prevention efforts, and improve academic performance by demonstrating the links between substance use and education outcomes. Every two years, over 200,000 students in 1,000 schools in Washington take the survey.

Prevention strategies and programs in Washington State have contributed to positive trends reported in the 2012 HYS, which include:

- Nearly 1,000 fewer students statewide use alcohol compared to the 2010 survey.
- Since 1998, drinking among 8th and 10th graders has dropped by half, and use among 6th graders has dropped from 14% to 2.5%.
- Since 1998, the percentage of 10th graders who binge drink (five or more drinks in a row) has dropped from 28% to 14%.
- Students in all grades reported an increased commitment to school.

What is the Community Prevention and Wellness Initiative?
The Community Prevention and Wellness Initiative (CPWI) is a partnership of state agencies, counties, schools and prevention coalitions supporting communities in preventing alcohol and other drug abuse. The highest priority is to reduce underage drinking among 8th and 10th grade students.

CPWI is a model for prevention collaboration in 52 communities, located in 93 counties and 11 Educational Service Districts.

CPWI provides community coalitions with funding, training and technical assistance for coordination, assessment, strategic planning, implementation, and evaluation of prevention services needed in their communities. This support helps communities build on their past successes and better measure how well prevention programs are meeting goals. As more resources become available, prevention services will be expanded to other communities.

By reducing underage drinking among 8th and 10th grade students, fewer young people will experience the related problems of juvenile delinquency, mental health conditions, and school failure.

CPWI allows the federal Department of Health and Human Services’ National Prevention Strategy to increase the health of individuals and communities. The strategy focuses on:

- Building healthy and safe community environments.
- Expanding quality preventive services in clinical and community settings.
- Empowering people to make healthy choices; and
- Eliminating health disparities.

The CPWI model allows us to better target and leverage limited public resources, increasing our ability to gain the best possible outcomes for communities. The more collaborative approach is expected to provide the long-term support needed for positive community change.

How do alcohol and other drugs harm children and teens?
Children and teens who use alcohol and other drugs at higher risk than adults for developing drug use disorders, mental health disorders, and emotional problems. This is because their brains are still developing, and are more sensitive than adults to the effects of drug abuse. Children who use alcohol and other drugs are more likely to:

- Develop addiction.
- Fail school.
- Engage in risky sexual behavior.
- Be seriously or fatally injured.
- Have depressive feelings or thoughts of suicide.

Children can also be harmed when their parents or caregivers have substance use disorders. The 2012 Healthy Youth Survey Drug Use and Health found that 8.3 million children (12 or younger) lived with at least one parent with an alcohol or drug problem.

How were children and teens determined to have used alcohol or other drugs?
The ability to implement evidence-based strategies: environmental, direct service, capacity building and public awareness.

4. Training resources for volunteers and paid staff

7. Resources to match intended outcomes in a performance-based contract.

5. The ability to participate in integrating substance abuse prevention, mental health promotion and primary care.

9. The ability to evaluate program and community-level change.

As CPWI communities begin to dominate the many positive outcomes from prevention services, we expect support to grow for expanding these investments to other high-need communities.

CPWI aligns with the federal Department of Health and Human Services’ National Prevention Strategy to increase the health of individuals and communities. The strategy focuses on:

- Building healthy and safe community environments.
- Expanding quality preventive services in clinical and community settings.
- Empowering people to make healthy choices; and
- Eliminating health disparities.

Prevention programs help to increase family bonding, which reduces the risk that a child will misuse alcohol or other drugs.

CPWI Coalition Hases:

1. The ability to identify key youth and adult community partners (such as health, law enforcement, education, parents and youth) as active members of the coalition.

2. At least one full-time community coordinator supporting the coalition and community.

3. At least one full-time prevention specialist in the selected school(s).

4. The readiness to benefit from prevention programs.

5. The ability to implement evidence-based strategies: environmental, direct service, capacity building and public awareness.

6. Training resources for volunteers and paid staff.

7. Resources to match intended outcomes in a performance-based contract.

8. The ability to participate in integrating substance abuse prevention, mental health promotion and primary care.

9. The ability to evaluate program and community-level change.

As CPWI communities begin to dominate the many positive outcomes from prevention services, we expect support to grow for expanding these investments to other high-need communities.

How is CPWI helping communities?
Some of the ways CPWI is already making a difference in communities:

- Local ordinances have been passed that reduce youth access and exposure to alcohol.

- Coalitions are working to raise awareness in their communities about the consequences of alcohol and other drug use.

- Students are learning how alcohol advertising can influence their decisions, and how to make healthy choices.

- Parents are learning skills to increase family bonding.

- There is more collaboration among school and community groups.

- Young people have more opportunities to be involved in positive activities.

- Students participating in the school-based program Project Success had a 57% decrease in binge drinking, a 44% decrease in marijuana use, and a 28% increase in passing their classes.

Why was CPWI chosen as the model for better outcomes?

Based on the prevalence, trends and impacts, our statewide priority is to support communities in reducing underage drinking and the harm it causes. While prevention programs are working to help more people make healthy choices, alcohol is used by more children and teens than all illicit drugs combined. In Washington alone, more than 115,000 students ages 12-17 use alcohol regularly. CPWI also supports efforts to prevent teens from becoming addicted to tobacco and prescription drugs.

According to the 2012 Washington Healthy Youth Survey:

- Nearly one in five 10th graders (19%) said they had been drunk high at school.

- About one in five students rode in a car with a driver who had been drinking.

- Marijuana use among 10th graders (12%) and 12th graders (27%) is almost double the percentage who smoke cigarettes, and fewer students think marijuana use is okay.

- Over 182,000 students (12-17 year old) seriously considered suicide in the past year (about one in every six students).

Prevention programs help to increase family bonding, which reduces the risk that a child will misuse alcohol or other drugs.
Empowering communities to create healthy changes

Achieving a healthy and safe school, work, and family life. The people who live in these areas enjoy equal access to quality education and healthcare, living-wage jobs, and affordable housing. Overall there is high quality of life for everyone.

A healthy and thriving community has safe places to learn, work, and raise a family. The people who live there enjoy prevention planning and practices that lead to the best possible outcomes, we support communities in creating sustainable, healthy changes through the Community Prevention and Wellness Initiative (CPWI).

What is the Community Prevention and Wellness Initiative?
The Community Prevention and Wellness Initiative (CPWI) is a partnership of state agencies, counties, schools and prevention coalitions supporting communities in preventing alcohol and other drug abuse. The highest priority is to reduce underage drinking among 8th and 10th grade students.

CPWI is funded and administered by the Washington State Department of Social and Health Services, Behavioral Health and Supportive Services Integration, Division of Behavioral Health and Recovery (DBHR), through a grant from the Service Integration Administration, Division of Behavioral Health and Recovery (DBHR), through a grant from the Substance Abuse and Mental Health Services Administration (SAMHSA).

CPWI provides community coalitions with funding, training and technical assistance for coordination, empowerment, strategic planning, implementation, and evaluation of prevention services needed in their communities. This support helps communities build on their past successes and better measure how well prevention programs are meeting goals. As more resources become available, prevention services will be expanded to other communities.

By reducing underage drinking among 8th and 10th grade students, fewer young people will experience the related problems of juvenile delinquency, mental health conditions, and school failure.

Underage drinking cost the residents of Washington more than $1.4 billion in 2012.

CPWI aligns with the federal Department of Health and Human Services’ National Prevention Strategy to increase the health of individuals and communities. The strategy focuses on:

- Building healthy and safe community environments;
- Expanding quality preventive services in schools and community settings;
- Empowering people to make healthy choices; and
- Eliminating health disparities.

The CPWI model allows us to better target and leverage limited public resources, increasing our ability to gain the best possible outcomes for communities. This more collaborative approach is expected to provide the long-term support needed for positive community change.

How do alcohol and other drugs harm children and teens?

Children and teens who use alcohol and other drugs are at higher risk than adults for developing short and long-term physical, developmental, and emotional problems. This is because their brains are still developing, and are more sensitive than adults to the effects of drug abuse. Children who use alcohol and other drugs are more likely to:

- Develop addiction;
- Fail school;
- Engage in risky sexual behavior;
- Be beaten or fail in school;
- Have depressive feelings or thoughts of suicide.

Children can also be harmed when their parents or caregivers have substance use disorders. The 2011 Washington State Survey on Drug Use and Health found that 8.3 million children in the U.S. live with at least one parent who abuses or is dependent on alcohol or an illicit drug. These children are at increased risk for abuse or neglect as well as physical, academic, social and emotional problems.

Prevention programs help to increase family bonding, which reduces the risk that a child will misuse alcohol or other drugs.

CPWI Coalition Success Stories

Big Brothers
Big Sisters
networking is a proven program to help youth make healthy choices.

Based on the prevalence, trends and impacts, our statewide priority is to support programs that:

1. Reduce the use of alcohol, tobacco and prescription drugs; and
2. Increase youth awareness and responsibility to make healthy choices.

CPWI provides community coalitions with funding, training and technical assistance for coordination, empowerment, strategic planning, implementation, and evaluation of prevention services needed in their communities. This support helps communities build on their past successes and better measure how well prevention programs are meeting goals. As more resources become available, prevention services will be expanded to other communities.

By reducing underage drinking among 8th and 10th grade students, fewer young people will experience the related problems of juvenile delinquency, mental health conditions, and school failure.

How is CPWI helping communities?

Some of the ways CPWI is already making a difference in communities:

- Local ordinances have been passed that reduce youth access and exposure to alcohol;
- Coalitions are working to raise awareness in their communities about the consequences of alcohol and other drug use;
- Students are learning how alcohol advertising can influence their decisions, and how to make healthy choices;
- Parents are learning skills to increase family bonding;
- There is more collaboration among school and community groups;
- Young people have more opportunities to be involved in positive activities;
- Students participating in the school-based program Project Success had a 37% decrease in binge drinking, a 44% decrease in marijuana use, and a 28% increase in passing their classes.

Why was CPWI chosen as the model for better outcomes?

Based on the prevalence, trends and impacts, our statewide priority is to support communities in reducing underage drinking and the harm it causes. While prevention programs are working to help more people make healthy choices, alcohol is used by more children and teens than all illicit drugs combined. In Washington alone, more than 115,000 students ages 12-17 use alcohol regularly. CPWI also supports efforts to prevent teens from using marijuana, tobacco and prescription drugs.

According to the 2012 Washington State Healthy Youth Survey:

- Nearly one in five 10th graders (19%) said they had been drunk in the past month.
- About one in five students rode in a car with a driver who had been drinking.
- Marijuana use among 10th graders (19%) and 12th graders (27%) is almost double the percentage who smoke cigarettes, and fewer students think marijuana use is risky.
- Over 162,000 students (37.1%) said they seriously considered suicide in the past year (about one in every six students).

Prevention programs help to increase family bonding, which reduces the risk that a child will misuse alcohol or other drugs.
Empowering communities to create healthy changes

Healthy and thriving communities have strong, hardworking, and safe families. The people who live there enjoy equal access to quality education and healthcare, living-wage jobs, and affordable housing. Overall there is high quality of life for everyone.

Underage drinking cost the residents of Washington more than $1.4 billion in 2010.

- Cost of under age drinking is $1,426.5 billion.
- Alcohol and other drug abuse undermine the health and safety of our communities. This is why effective prevention services are vital for every community. When we prevent early use of alcohol and other drugs, we also prevent the far reaching and high costs of substance abuse and addiction. These costs include:
  - Child abuse and neglect.
  - Other forms of violence.
  - Unemployment and poverty.
  - Crime, and
  - Medical care.

As part of our mission to transform lives, the state Department of Social and Health Services has worked with our partners to redesign our system to focus on addressing limited resources in targeted communities. By investing in prevention planning and practice that lead to the best possible results, we can make creating sustainable, healthy changes through the Community Prevention and Wellness Initiative (CPWI).

What is the Community Prevention and Wellness Initiative?
The Community Prevention and Wellness Initiative (CPWI) is a partnership of state agencies, counties, school and prevention coalitions and supporting communities in preventing alcohol and other drug abuse. The highest priority is to reduce underage drinking among 8th and 10th grade students.

CPWI is funded and administered by the Washington State Department of Social and Health Services, Behavioral Health and Service Integration Administration, Division of Behavioral Health and Recovery (DBHR), through a grant from the Substance Abuse and Mental Health Services Administration (SAMHSA).

Services are focused in communities experiencing high levels of underage drinking, crime, school drop-out, and unemployment. Communities are chosen based on their needs, and their readiness to address them. In the first three years, CPWI has funded prevention coalitions in 52 communities, located in all 39 counties and nine Washington more than $1.4 billion in 2010.

As part of our mission to transform lives, the state Department of Social and Health Services has worked with our partners to redesign our system to focus on addressing limited resources in targeted communities. By investing in prevention planning and practice that lead to the best possible results, we can make creating sustainable, healthy changes through the Community Prevention and Wellness Initiative (CPWI).

How is CPWI helping communities?
Some of the ways CPWI is already making a difference in communities:

- Local ordinances have been passed that reduce youth access and exposure to alcohol.
- Coalitions are working to raise awareness in their communities about the consequences of alcohol and other drug abuse.
- Students are learning how alcohol advertising can influence their decisions, and how to make healthy choices.
- Parents are learning skills to increase family bonding.
- There is more collaboration among school and community groups.
- Young people have more opportunities to be involved in positive activities.
- Students participating in school-based program Project Success had a 37% decrease in binge drinking, a 44% decrease in marijuana use, and a 28% increase in passing in their classes.

Why was CPWI chosen as the model for better outcomes?
CPWI aligns with the federal Department of Health and Human Services’ National Prevention Strategy to increase the health of individuals and communities. The strategy focuses on:

- Building healthy and safe community environments.
- Expanding quality preventive services in school and community settings.
- Empowering people to make healthy choices; and
- Eliminating health disparities.

The CPWI model allows us to better target and leverage limited public resources, increasing our ability to gain the best possible outcomes for communities. This more collaborative approach is expected to provide the long-term support needed for positive community change.

How do alcohol and other drugs harm children and teens?
Children and teens who use alcohol and other drugs are at higher risk than adults for developing short- and long-term physical, developmental, and emotional problems. This is because their brains are still developing, and are more sensitive than adults to the effects of drug abuse. Children who use alcohol and other drugs are more likely to:

- Develop addiction.
- Fail school.
- Engage in risky sexual behavior.
- Fail school or be truant.
- Have depressive feelings or thoughts of suicide.

Children can also be harmed when their parents or caregivers have substance use disorders. The 2012 Healthy Youth Survey on Drug Use and Health found that 8.3 million children in the U.S. live with at least one parent who abuses alcohol or an illicit drug. These children are at increased risk for abuse or neglect, as well as physical, academic, social and emotional problems.

Prevention programs help to increase family bonding, which reduces the risk that a child will misuse alcohol or other drugs.

CPWI aligns with the federal Department of Health and Human Services’ National Prevention Strategy to increase the health of individuals and communities. The strategy focuses on:

- Building healthy and safe community environments.

The CPWI model allows us to better target and leverage limited public resources, increasing our ability to gain the best possible outcomes for communities. This more collaborative approach is expected to provide the long-term support needed for positive community change.
How do we know that prevention works?

Parents and others in their communities play a vital role in influencing young people. Evidence-based prevention programs have also been proven to reduce drug use and public spending on its consequences (Washington State Institute for Public Policy). CPWI communities receive funding for evidence-based programs for youth and families, and changing community norms to reduce risk factors (such as early first use of drug) and increase protective factors (such as youth who feel connected to their families, school and peers).

The Washington State Healthy Youth Survey (HYS) allows us to monitor the health of students, evaluate the impact of our prevention efforts, and improve academic performance by demonstrating the links between substance use and education outcomes. Every two years, over 200,000 students in 1,000 schools in Washington take the survey.

Prevention strategies and programs in Washington State have contributed to positive trends reported in the 2012 HYS, which include:

- Nearly 11,000 fewer students statewide use alcohol compared to the 2010 survey.
- Since 1998, drinking among 8th and 10th graders has dropped by half, and use among 6th graders has dropped from 14% to 2.5%.
- Since 1998, the percentage of 10th graders who binge drink (five or more drinks in a row) has dropped from 28% to 14%.
- Students in all grades reported an increased commitment to school.

For more information about CPWI, email Steve.Smothers@dshs.wa.gov.
