

# Risk and Protection Profile for Substance Abuse Prevention in **Whitman County**

**January 2025**

4.47-38:12025

Aaron Starks, MA, Irina Sharkova, PhD  
Stephen Leibenguth, Alice Huber, PhD

In conjunction with the  
**Washington State Health Care Authority**  
Division of Behavioral Health and Recovery  
Teesha Kirschbaum, Assistant Director

*Washington State*  
**Department of Social  
& Health Services**

---

*Transforming lives*

**Research and Data Analysis Division**

These tables provide a comprehensive update of data published in previous Profiles. They are among the timeliest data available to planners for understanding the risks of substance abuse among youth in their counties. Community, family, peer, and school-related factors are presented within the Hawkins and Catalano risk and protective factor framework that is used by many substance abuse prevention planners across the country.

For more information about the data, framework, definitions, and other topics, see the 1997 Profile on Risk and Protection for Substance Abuse Prevention Planning in Washington State, (Report 4.15-40). That report and subsequent years' Profiles are available on the RDA website at: <https://www.dshs.wa.gov/ffa/rda/core-profile-archive>.

- 74. Police Agencies that did not Report Arrests

## NEW THIS ISSUE:

With this release (January 2025), we have returned to using the Office of Financial Management (OFM) population estimates as the only source of such data for all years and geographic areas. Please note that the rates utilizing Small Area Demographic Estimates (SADE) population estimates for denominators may differ from previously published rates in our reports. For more information about the SADE, see:

<https://ofm.wa.gov/washington-data-research/population-demographics/population-estimates/estimates-april-1-population-agesex-race-and-hispanic-origin>

## Community Definition

This report consists of charts and tables with the latest data for over 50 indicators of risk and protection for Whitman County, as well as historical trends for the last 12 years. For each indicator, we present rates, numerators and denominators. To help put this information in a broader context, we also provide statewide (state average) and national rates for the same period. In addition, we compute rates for a group of other counties, which have some characteristics in common with Whitman County. We call this group 'Counties Like Us.'

The need for this additional community type arises from a substantial diversity of conditions across the urban and rural Washington, as well as the eastern and western parts of the state. The comparison we present is for a group of counties that are similar in characteristics related to prevention planning: population of young people (aged 10-24), the percentage of deaths in the county that are alcohol and drug-related, and a simple geographic division into Eastern and Western Washington. For each indicator the Counties Like Us rate is the average rate across all of the counties in the cluster. The Technical Notes include a more detailed explanation of 'Counties Like Us'.

County	Main CLU Criteria			Demographics						
	Young People (age 10-24)	AOD Death Rate	Total Population	Female	Male	Adult (age 18+)	Youth (age 0-17)	White Not-Hispanic	Any Minority	
Whitman	19,485	40.7%	14.0	47,883	50.3%	49.7%	80.9%	19.1%	76.4%	23.6%
Adams	5,566	26.3%	14.8	21,148	49.2%	50.8%	67.2%	32.8%	32.7%	67.3%
Asotin	3,862	28.0%	14.6	22,650	51.1%	48.9%	80.4%	19.6%	90.4%	9.6%
Chelan	15,371	23.6%	17.8	81,482	50.1%	49.9%	78.4%	21.6%	67.3%	32.7%
Columbia	562	19.5%	SP	3,950	50.7%	49.3%	83.4%	16.6%	87.7%	12.3%
Douglas	9,275	20.9%	14.7	44,461	49.6%	50.4%	75.5%	24.5%	60.6%	39.4%
Garfield	381	25.0%	SP	2,300	49.6%	50.4%	79.5%	20.5%	91.4%	8.6%
Kittitas	13,215	28.0%	15.5	47,168	50.3%	49.7%	82.8%	17.2%	81.9%	18.1%
Lincoln	1,937	18.1%	12.0	11,121	49.2%	50.8%	79.4%	20.6%	90.9%	9.1%
Stevens	8,256	20.0%	18.2	47,341	50.0%	50.0%	79.3%	20.7%	87.4%	12.6%

## Interpreting Standardized Five-Year Indicator Profile

# Community: Availability of Drugs

Domain & Risk or Protective Factor

## Alcohol Retail Licenses

Indicator displayed on this page

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	Comparable National Data Not Available											
State	2.02	2.01	2.16	1.96	2.16	2.14	2.17	2.24	2.04	2.04	2.02	2.11
Counties Like Us	2.3	2.31	2.48	2.45	2.66	2.66	2.68	2.66	2.36	2.38	2.4	2.45
Cascadia County	3.4	3.51	3.53	3.24	3.69	3.74	3.76	3.63	3.15	3.12	2.85	3.01
Licenses	230	Rate Numerator		228	262	269	273	266	234	233	217	233
All Persons	67,661	Rate Denominator		70,362	70,940	71,767	72,553	73,217	74,198	74,867	76,068	77,366

**Notes:** The alcohol retail license rate formula is: Rate = (numerator / denominator) x factor. Example: in 2012: ( 230 / 67,661 ) x 1,000 = 2.02. Read the rate as 2.02 licenses per 1,000 people. Distributors, distillers, and wineries are not included.

ons (all ages). Retail liquor stores, liquor stores, and wine stores are only included in the data. Each indicator graph and table are followed by a description of the elements used in calculating the rate.

This will include relevant notes about legislation, data definition changes or even world events which might explain what is displayed.

Effective March 1, 2012, Initiative 1183 privatized liquor sales in Washington State. Prior to privatization, 330 liquor stores regulated by the LCB, none of which were included in the data. This change in store geographies as local markets adjusted to those store closures or their conversion to privately-run businesses which were then counted in this report. Adding the sale of spirits to existing licensees who had previously been limited to beer and wine sales would not show up as an increase in the number of licenses.

Policies on licensing distributors, taxing the proceeds, and determining who can sell alcohol vary substantially from state to state. Consequently, there is no consistent comparable source for national data.

**Data Source:** Washington State Liquor and Cannabis Board. Off-Premises and On-Premises Licensees. Numerator data source. <https://lcb.wa.gov/records/frequently-requested-lists>

**Population Estimate:** Washington State Office of Financial Management, Forecasting Division. Denominator data source. <https://www.ofm.wa.gov/washington-data-research/population-demographics>

**Data Updated:** 02/03/2024 When these data sources were last updated.

# Standardized Five-Year Indicator Profile

## Standardized Five-Year Indicator Profile

Beginning with the December 2015 report series, On-time and Extended Graduation are shown as protective factors. In previous reports, standardized rates indicated a negative factor: Risk of Not Graduating (see Technical Notes for details).

## Standardized Five-Year Indicator Profile

## Standardized Five-Year Indicator Profile

## Community: Availability of Drugs

### Alcohol Retail Licenses

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	No comparable national data for this rate											
State	2.21	2.19	2.21	2.20	2.13	2.13	2.06	2.10	2.07	2.02	2.01	2.03
Counties Like Us	2.78	2.78	2.81	2.82	2.48	2.49	2.59	2.68	2.66	2.72	2.69	2.77
Whitman County	2.02	2.01	2.06	2.03	1.81	1.94	1.97	2.01	1.94	2.21	2.04	1.98
Alcohol Licenses	91	91	94	94	84	91	93	96	93	98	97	95
All Persons	45,137	45,249	45,607	46,217	46,493	46,857	47,152	47,846	47,973	44,433	47,588	47,883

**Notes:** The alcohol retail licenses active during the year, per 1,000 persons (all ages). Retail licenses include on-premises consumption such as restaurants, taverns, bars and off-premises vendors such as grocery stores, liquor stores and deli marts. Retail locations with multiple privileges, such as a grocery store with both spirits and beer/wine privileges, are only counted once. Retail alcohol facilities on military bases and reservations are not licensed by the State and therefore are not included in these data. Non-retail licensees, such as distributors, distillers, and wineries are not included.

Effective March 1, 2012, Initiative 1183 privatized liquor sales in Washington State. Prior to privatization, the sale of spirits was limited to 330 liquor stores regulated by the LCB, none of which were included in the data. This change may account for minor shifts at smaller geographies as local markets adjusted to those store closures or their conversion to privately-run businesses which were then counted in this report. Adding the sale of spirits to existing licensees who had previously been limited to beer and wine sales would not show up as an increase in the number of licenses.

Policies on licensing distributors, taxing the proceeds, and determining who can sell alcohol vary substantially from state to state. Consequently, there is no consistent comparable source for national data.

### Unemployed Persons (Age 16+)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	8.05	7.38	6.16	5.28	4.87	4.35	3.90	3.67	8.05	5.35	3.65	
State	8.16	7.01	6.24	5.65	5.43	4.76	4.50	4.25	8.41	5.23	4.21	4.10
Counties Like Us	8.00	7.52	6.82	5.95	6.17	5.22	5.03	5.20	7.73	5.25	5.14	4.54
Whitman County	6.28	6.18	5.52	4.67	5.13	4.43	4.33	4.33	5.81	4.27	4.82	4.04
Unemployed	1,360	1,300	1,217	1,061	1,184	1,039	1,025	1,038	1,301	996	1,086	942
Labor Force, 16+	21,660	21,050	22,060	22,743	23,069	23,465	23,685	23,996	22,389	23,335	22,539	23,296

**Notes:** The unemployed persons (age 16 and over) per 100 persons in the civilian labor force. Unemployed persons are individuals who are currently available for work have actively looked for work, and do not have a job. The civilian labor force includes persons who are working or looking for work. The monthly numbers are a snapshot in time done approximately the 12th of each month. A yearly estimate is then produced by averaging the monthly numbers. Historical data has been updated. Data for the latest year should be considered preliminary. Suppression code definitions for yearly rates are explained in Technical Notes.

All Persons	45,137	45,249	45,607	46,217	46,493	46,857	47,152	47,846	47,973	44,433	47,588	47,883

**Notes:** Net migration is the annual number of new residents that moved into an area minus the number of residents that moved out of an area, per 1,000 persons. The Office of Financial Management estimates annual net migration for twelve months ending on March 31st of a given year. For example, annual net migration in 2014 refers to the period from April 1, 2013 through March 31, 2014. Previously Net migration was calculated as a 3-year moving average which smooths changes over time. Now, annual rates, numerators and denominators are based on single-year data.

## Community: Antisocial Behavior of Community Adults

### Arrests, Alcohol-Related (Age 18+)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	8.88	7.94	7.34	6.89	6.32	6.02	5.74	5.42	4.04	1.96	3.30	
State	7.27	6.69	5.99	5.29	4.87	5.10	5.13	5.09	3.83	3.55	3.66	3.86
Counties Like Us	5.59	6.74	6.11	5.76	5.57	5.15	5.79	5.84	3.73	3.37	3.64	3.76
Whitman County	10.64	13.95	13.49	12.32	9.47	5.74	7.98	8.84	6.51	4.93	4.76	5.29
Arrests, 18+	398	518	512	456	354	215	313	349	243	178	183	197
Adjusted Pop 18+	37,391	37,125	37,962	37,014	37,386	37,431	39,228	39,492	37,342	36,086	38,460	37,258

**Notes:** The alcohol violations (age 18+), per 1,000 adults (age 18+). Alcohol violations include all crimes involving driving under the influence, liquor law violations, and drunkenness. DUI arrests by the Washington State Patrol are included in the state trend analysis. However, they are not included in the county rankings since WSP arrests are not assigned to counties. Denominators are adjusted by subtracting the population of police agencies that did not report arrests to WASPC. In spite of this population adjustment, when the non-reporting police jurisdiction is where much of the crime occurs, the rate for the county will be lower than it would be if that jurisdiction was included. For more information on the percent subtracted, suppression code definitions and the agencies not reporting, see the Technical Notes and the appendix, Non-Reporting Agencies and Population.

The types of crimes used within this rate have been represented in both Summary UCR and NIBRS systems and are not likely to be substantially impacted by the reporting system changes from 2012 to 2018. Refer to the Technical Notes section for information on UCR and NIBRS.

Persons, birth-17	6,839	6,890	6,974	7,080	7,175	7,252	7,323	7,453	7,512	8,346	9,128	9,156

**Notes:** The children (age birth-17) identified as victims in reports to Child Protective Services that were accepted for further action, per 1,000 children (age birth-17). A 'referral' is a report of suspected child abuse which may have multiple listed victims. Mandated reporters, such as doctors, nurses, psychologists, pharmacists, teachers, child care providers, and social service counselors, notify Child Protective Services if they suspect a child is in danger of negligent treatment, physical abuse, sexual abuse, or other maltreatment. In addition, other concerned individuals may report suspected child abuse cases. If the information provided meets the sufficiency screen, the referral is accepted for further action. A referral may have one or more children identified as victims. Children are counted more than once if they are reported as a victim more than once during the year. The data in this report are based on the total number of victims reported in Child Protective Services referrals. Child location is derived from the residence at the time of referral. Suppression code definitions for yearly rates are explained in Technical Notes.

## School: Academic Achievement

### High School Cohort (Cumulative) Dropouts

	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
National	21.0	19.5	18.3	16.9	16.6							
State	13.93	13.57	12.96	12.31	11.87	11.69	11.48	11.16	11.16	9.04	9.52	10.06
Counties Like Us	13.89		16.68	14.55	13.37	12.07	12.66	9.63	9.87	8.05	9.67	9.97
Whitman County	5.54	4.41	4.73	3.80	4.82	2.31	4.17	5.48	4.91	4.89	4.32	6.67
Dropouts	19	16	15	12	16	7	13	16	13	13	14	22
Student Cohort	343	363	317	316	332	303	312	292	265	266	324	330

**Notes:** The percentage of students in the same freshman cohort dropping out prior to graduation divided by the adjusted freshman class cohort of the graduates. The High School Cohort Dropout rate (may also be referred to as the longitudinal, cumulative, or freshmen cohort dropout rate) measures what happens to a single group (or cohort) of students over a period of time. This rate is most useful for seeing the long-term impact on the community.

By contractual agreement with OSPI, any rates above 95% will be listed as >95% or 'Greater than 95%', any rates below 5% will be listed as <5% or 'Less than 5%', and data is suppressed when less than ten students were in the denominator to avoid individual student identification. For more information on the changes in rate computation and cohort methodology, see the Technical Notes.

**Data Last Updated:** 06/23/2023

# School: Academic Achievement

## High School Event (Annual) Dropouts

As of 2018, Annual Event Dropout data have been discontinued. Programs relying on this measure are encouraged to use the Cohort Dropout measure. The historical data shown below will eventually be removed from this report.

	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
National	3.30	3.30			4.90	4.80	4.70	4.70				
State	3.74	3.52			3.55	3.44	4.36	4.46				
Counties Like Us	<5	<5			<5	<5	<5	<5				
Whitman County	<5	<5			<5	<5	<5	<5				
Dropouts	SP	SP			SP	SP	SP	SP				
Students	1,366	1,358			1,332	1,380	1,386	1,365				

**Notes:** The Annual Dropout rate measures the proportion of students enrolled in grades 9-12 who drop out in a single year without completing high school as a percentage of all students in grades 9 through 12 that year. When districts try new policies or projects to keep students in school the impact of those actions will be more immediately visible in this rate. This rate is much more time intensive to compute with the new cohort designations for students as it draws information from four separate cohorts. This indicator has a break in data production for 2013/2014 while data collection transitions to using the adjusted cohort for most other calculations. The formula for this indicator has not changed. By contractual agreement with OSPI, any rates above 95% will be listed as >95% or 'Greater than 95%', any rates below 5% will be listed as <5% or 'Less than 5%', and data is suppressed when less than ten students were in the denominator to avoid individual student identification. For more information on the changes in rate computation and cohort methodology, see the Technical Notes.

## High School On-time Graduation

	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
National	79.0	80.4	81.7	83.3	84.6	85.0	85.4	85.3	86.9	87.2	88.1	87.9
State	76.61	77.18	76.04	77.24	78.09	79.13	79.34	80.87	80.95	82.92	82.53	82.26
Counties Like Us	79.10	75.84	74.00	75.56	77.46	79.60	79.47	83.15	84.30	83.57	83.58	81.95
Whitman County	90.09	89.53	86.12	90.19	86.75	92.08	92.31	89.70	84.59	91.67	85.13	88.46
Graduates	309	325	273	285	288	279	288	270	247	242	292	299
Student Cohort	343	363	317	316	332	303	312	292	265	266	324	330

**Notes:** The percentage of students who graduate in four years by completion of the graduation requirements. The rate divides the number of students in the same freshman cohort graduating in their fourth year by the adjusted freshman cohort for those students. In this method there are no adjustments for students in Special Education or English Language Learners who are expected to take longer. Additionally, students transferring from out of state or other districts who are credit deficient may not be reclassified into a lower grade.

By contractual agreement with OSPI, any rates above 95% will be listed as >95% or 'Greater than 95%', any rates below 5% will be listed as <5% or 'Less than 5%', and data is suppressed when less than ten students were in the denominator to avoid individual student identification. For more information on the changes in rate computation and cohort methodology, see the Technical Notes.

# School: School Climate

## Unexcused Absences

Unexcused Absences are no longer reported.  
Refer to the Regular Attendance indicator as a replacement.

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
National	No comparable national data for this rate											
State	5.08	5.44	6.03	6.66	0.00							
Counties Like Us	2.61	3.33	3.74	4.31	0.00							
Whitman County	0.53	0.89	1.24	0.83	0.00							
Absences	216	311	452	404	0							
Potential Days	405,941	351,165	364,247	485,633	458,460							

**Notes:** The unexcused absences for students in grades 1-8 per thousand potential school days. Potential school days are the number of days students were taught from the first day of school through May 31 in each school building multiplied by the net served students in grades 1-8 in that building. The definition of an unexcused absence is a local decision, so the definition differs among schools and districts. In general, a student who has an unexcused absence has not attended a majority of hours or periods in a school day, or has not complied with a more restrictive district policy, and has not met the conditions for an excused absence (see RCW 28A.225.020).

**Numerator Data Source:** Washington Office of Superintendent of Public Instruction, Washington State Report Card, Unexcused Absence Files.

<http://www.k12.wa.us/Attendance/Truancy.aspx>

**Data Last Updated:** 01/23/2025

## School: School Climate

### Regular Attendance

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
National	No comparable national data for this rate											
State			87.91	87.28	87.00	86.78	86.64	--	--	69.77	73.41	76.58
Counties Like Us			87.66	86.93	86.42	87.20	87.55	--	--	67.83	73.90	78.26
Whitman County			90.25	90.02	89.22	90.63	91.13	--	--	76.24	77.00	80.29
Regular Attendees			2,666	2,697	2,631	2,718	2,743	--	--	2,082	2,149	2,257
Students			2,954	2,996	2,949	2,999	3,010	--	--	2,731	2,791	2,811

**Notes:** The percentage of students who regularly attend school. Regular attendance is defined as having, on average, less than two absences per month. It does not matter if the absences are excused or unexcused. An absence is defined as missing more than half the school day. This measure includes students that were enrolled for at least 90 days at any given school. Unlike risk indicators, a higher value on this protective factor is preferable.

2020 and 2021 rates reflect the suspension of in-person learning in response to the COVID-19 pandemic.

Regular Attendance replaces Unexcused Absences as a School Climate indicator in this report beginning July, 2020. For additional information about Regular Attendance refer to the OSPI web site, [www.k12.wa.us](http://www.k12.wa.us). See also RCW 28A.225.

## Individual/ Peer: Early Criminal Justice Involvement

### Arrests, Alcohol- or Drug-Related (Age 10-14)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	1.56	1.33	1.17	1.02	0.95	0.90	0.94	0.96	0.44	0.31	0.64	
State	1.95	1.83	1.61	1.49	1.21	1.18	1.02	1.02	0.29	0.11	0.21	0.34
Counties Like Us	2.43	2.60	2.78	3.79	2.14	2.01	0.99	1.65	0.63	0.25	0.65	0.62
Whitman County	0.00	0.57	5.76	0.57	0.62	0.56	0.51	0.50	0.00	0.47	0.00	0.50
Arrests, 10-14	0	<10	10	<10	<10	<10	<10	<10	0	<10	0	<10
Adjusted Pop 10-14	1,755	1,743	1,735	1,760	1,602	1,779	1,956	2,011	1,884	2,112	2,165	2,009

**Notes:** The arrests of younger adolescents (age 10-14) for alcohol and drug law violations, per 1,000 adolescents (age 10-14). Alcohol violations include all crimes involving driving under the influence, liquor law violations, and drunkenness. For children, arrests for liquor law violations are usually arrests for minor in possession. Drug law violations include all crimes involving the sale, manufacturing, and possession of drugs.

1) Denominators are adjusted by subtracting the population of police agencies that did not report arrests. For more information on the percent subtracted, suppression code definitions and the agencies not reporting, see the Technical Notes and the appendix, Non-Reporting Agencies and Population.

2) The DUI portion of this measure is likely understated, because arrests made by the State Patrol are not attributable to counties. State Patrol arrests are included in the state rates.

The types of crimes used within this rate have been represented in both Summary UCR and NIBRS systems and are not likely to be substantially impacted by the reporting system changes from 2012 to 2018. Refer to the Technical Notes section for information on UCR and NIBRS.

**Data Last Updated:** 01/02/2025

## Individual/ Peer: Early Criminal Justice Involvement

### Arrests, Vandalism (Age 10-14)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	1.08	0.85	0.81	0.75	0.73	0.69	0.54	0.66	0.44	0.28	0.48	
State	1.19	1.01	0.68	0.83	0.55	0.63	0.61	0.76	0.48	0.33	0.38	0.49
Counties Like Us	1.06	1.76	1.16	1.72	0.61	0.44	0.73	0.72	1.09	0.83	0.97	0.95
Whitman County	0.57	1.15	0.58	1.14	0.62	0.56	1.02	0.00	1.59	0.95	0.46	0.00
Arrests, 10-14	<10	<10	<10	<10	<10	<10	<10	0	<10	<10	<10	0
Adjusted Pop 10-14	1,755	1,743	1,735	1,760	1,602	1,779	1,956	2,011	1,884	2,112	2,165	2,009

**Notes:** The arrests of younger adolescents (age 10-14) for vandalism (including residence, non-residence, vehicles, venerated objects, police cars, or other) per 1,000 adolescents (age 10-14). Denominators are adjusted by subtracting the population of police agencies that did not report arrests. In spite of this population adjustment, when the non-reporting police jurisdiction is where much of the crime occurs, the rate for the county will be lower than it would be if that jurisdiction was included. For more information on the percent subtracted, suppression code definitions and the agencies not reporting, see the Technical Notes and the appendix, Non-Reporting Agencies and Population.

The types of crimes used within this rate have been represented in both Summary UCR and NIBRS systems and are not likely to be substantially impacted by the reporting system changes from 2012 to 2018. Refer to the Technical Notes section for information on UCR and NIBRS.

## Individual/ Peer: Early Criminal Justice Involvement

### Arrests Total, (Age 10-14)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	17.28	14.84	13.43	12.12	11.32	10.91	10.24	10.60	5.88	4.20	7.66	
State	12.23	11.64	10.78	10.21	8.41	8.11	7.55	8.07	4.29	3.11	4.46	5.73
Counties Like Us	16.60	16.40	16.17	17.05	11.90	7.34	8.75	7.93	6.14	5.98	9.17	9.49
Whitman County	5.13	22.38	32.85	11.93	10.61	8.43	9.20	6.46	5.84	5.68	6.47	10.95
Arrests, 10-14	<10	39	57	21	17	15	18	13	11	12	14	22
Adjusted Pop 10-14	1,755	1,743	1,735	1,760	1,602	1,779	1,956	2,011	1,884	2,112	2,165	2,009

**Notes:** The arrests of adolescents (age 10-14) for any crime, per 1,000 adolescents (age 10-14).

Washington State transitioned from Summary UCR to the NIBRS system for reporting beginning in 2012, with full adoption by agencies in 2018. Summary UCR collected eight (8) Part One Crime offenses: criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft and arson. NIBRS collects information on twenty-three (23) different offenses, all Part One Crimes plus others including forcible and non-forcible sex offenses, fraud, kidnapping, and drug violations. Care must be taken when interpreting the long-term yearly trend of 'total arrest' rates for an area or comparing these data to older records.

Suicide & Attempt Persons, 10-17	By-year numerator values suppressed due to small numbers. Non-zero values ranged between 1 and 14. By-year denominator values suppressed. Secondary suppression activated.											

**Notes:** The adolescents (age 10-17) who committed suicide or were admitted to the hospital for suicide attempts, per 100,000 adolescents (age 10-17). Suicides are based on death certificate information. Suicide attempts are based on hospital admissions, but do not include admissions to federal hospitals. Suppression code definitions for yearly rates are explained in Technical Notes. Due to contractual agreement data may not be displayed for locations with adolescent populations less than 100.

Data from 2008 forward was revised to include observation and standard hospital stays, as well as supplemental diagnosis and external cause codes. More information on these changes is available in Technical Notes.

The coding of intent for injuries and poisonings in hospital admissions data underwent a transition from ICD-9 to ICD-10 codes in the fall of 2015. It has affected the 2015 and 2016 data on suicide attempts reported here. Researchers have concluded that “marked changes... almost certainly represent artifacts of coding changes rather than true changes in suicidal behavior.” It appears some cases previously coded as undetermined intent are now being coded as self-harm. For additional information, see: Christine Stewart, Phillip M. Crawford, and Gregory E. Simon (2017). 'Changes in Coding of Suicide Attempts or Self-Harm With Transition From ICD-9 to ICD-10.' *Psychiatric Services*, 68(3), p. 215. online at <https://ps.psychiatryonline.org/doi/10.1176/appi.ps.201600450>

Hospitalizations	1,906	1,713	1,654	1,646	1,677	1,649	1,603	1,620	1,431	1,558	1,445	1,264

**Notes:** The injury or accident hospitalizations for women as a percent of all hospitalizations for women (age 18+). Suppression code definitions for yearly rates are explained in Technical Notes. Due to contractual agreement data may not be displayed for areas with less than 100 hospitalizations. Beginning on October 1, 2015 diagnosis transitioned to International Classification of Diseases, Tenth Revision (ICD-10). Data from 2008 forward was revised to include observation and standard hospital stays, as well as supplemental diagnosis and external cause codes. More information on these changes is available in Technical Notes.

**Notes:** The domestic violence-related offenses, per 1,000 persons. Domestic violence includes any violence of one family member against another family member. Family can include spouses, former spouses, parents who have children in common regardless of marital status, adults who live in the same household, as well as parents and their children. Offenses are incidence reporting. When more than one victim is involved an offence is filed for each victim. Multiple property violations performed at the same incident are counted as one offence. However when both types of events happen, only the victim incidents are reported as offenses. Offenses focus on the nature of the crime, while arrests focus on the apprehended accused perpetrator. Many offenses occur without arresting perpetrators.

Denominators are adjusted by subtracting the population of police agencies that did not report offenses. For suppression code definitions, percent subtracted and the agencies not reporting, see the appendix, Non-Reporting Agencies and Population.

The types of crimes used within this rate have been represented in both Summary UCR and NIBRS systems and are not likely to be substantially impacted by the reporting system changes from 2012 to 2018. Refer to the Technical Notes section for information on UCR and NIBRS.

Adjusted Pop 10-17	2,854	2,790	2,695	2,723	2,354	2,796	3,137	3,263	3,059	4,276	5,025	4,855

**Notes:** The arrests of adolescents (age 10-17) for any crime, per 1,000 adolescents (age 10-17). Washington State transitioned from Summary UCR to the NIBRS system for reporting beginning in 2012, with full adoption by agencies in 2018. Summary UCR collected eight (8) Part One Crime offenses: criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft and arson. NIBRS collects information on twenty-three (23) different offenses, all Part One Crimes plus others including forcible and non-forcible sex offenses, fraud, kidnapping, and drug violations. Care must be taken when interpreting the long-term yearly trend of 'total arrest' rates for an area or in comparing data to older reports.

**Data Last Updated:** 01/02/2025

# Problem Outcomes: Substance Use

## Alcohol-Related Traffic Fatalities Per All Traffic Fatalities

**Notes:** The alcohol-related traffic fatalities, per 100 traffic fatalities. 'Alcohol-related' means that the officer on the scene determined that at least one driver involved in the accident 'had been drinking.' Thus, 'Alcohol-related' includes but is not limited to the legal definition of driving under the influence. Care should be taken since small numbers of events can cause unreliable rates in some counties.

**Numerator Data Source:** Washington State Traffic Safety Commission, Traffic Collisions in Washington State, Accident Records Database (FARS). Washington State Patrol, Records Section, Traffic Collisions in Washington State, Accident Records Database.  
<http://www.wsp.wa.gov/driver/collision-records/>

**Data Last Updated:** 03/07/2024

## Problem Outcomes: Substance Use

### Arrests, Alcohol Violation (Age 10-17)

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
National	2.33	2.33	2.03	1.63	1.43	1.31	1.05	0.99	0.78	0.41	0.56	
State	2.60	2.36	1.95	1.75	1.41	1.30	1.03	0.92	0.66	0.31	0.36	0.46
Counties Like Us	3.30	3.57	2.31	2.99	2.37	2.35	2.28	1.56	1.16	0.74	0.88	0.99
Whitman County	4.91	7.53	5.19	1.84	1.70	2.50	0.96	0.92	0.65	0.00	0.20	0.82
Arrests, 10-17	14	21	14	<10	<10	<10	<10	<10	<10	0	<10	<10
Adjusted Pop 10-17	2,854	2,790	2,695	2,723	2,354	2,796	3,137	3,263	3,059	4,276	5,025	4,855

**Notes:** The arrests of adolescents (age 10-17) for alcohol violations, per 1,000 adolescents (age 10-17). Alcohol violations include all crimes involving driving under the influence, liquor law violations, and drunkenness. For children, arrests for liquor law violations are usually arrests for minor in possession. DUI arrests by the Washington State Patrol are included in the state trend analysis. However, they are not included in the county rankings since WSP arrests are not assigned to counties. Denominators are adjusted by subtracting the population of police agencies that did not report arrests to WASPC. In spite of this population adjustment, when the non-reporting police jurisdiction is where much of the crime occurs, the rate for the county will be lower than it would be if that jurisdiction was included. For more information on the percent subtracted, suppression code definitions and the agencies not reporting, see the Technical Notes and the appendix, Non-Reporting Agencies and Population.

The types of crimes used within this rate have been represented in both Summary UCR and NIBRS systems and are not likely to be substantially impacted by the reporting system changes from 2012 to 2018. Refer to the Technical Notes section for information on UCR and NIBRS.

### Population Denominators Used in This Report

Population is updated as the data become available. The report displays the most recent twelve years of data for each indicator. Rates are not calculated until both the numerator and the denominator data are available. This report is published in January and July in order to provide updates to all indicators within a reasonable time frame.

### ATTENTION: POPULATION ESTIMATES

With this release (January 2025), we have returned to using the Office of Financial Management (OFM) population estimates as the only source of such data for all years and geographic areas. For more information about the Small Area Demographic Estimates (SADE), see <https://ofm.wa.gov/washington-data-research/population-demographics/population-estimates/estimates-april-1-population-agesex-race-and-hispanic-origin>. Please note that the rates utilizing SADE population estimates for denominators may differ from previously published rates in our reports.

### Counting Alcohol- or Drug-related Deaths

AOD deaths are identified by matching all the contributory causes of death from death certificate records to a list of causes that are considered AOD-related. The deaths identified as AOD-related then may be summed to provide area totals. Dividing the total AOD-related deaths by all deaths in an area gives the percent of all deaths that are alcohol and drug related. Lists of underlying causes of death that are AOD-related have been developed in several studies. Citations for these studies are listed prior to the AOD attribution tables. AOD-related deaths used in this report are determined using a comprehensive assembly of disease, accident, and injury codes identified in those studies. The codes are based upon the International Classification of Diseases, Ninth Revision (ICD-9) from 1990 to 1998 or International Classification of Diseases, Tenth Revision (ICD-10) after 1998.

The identified AOD-related causes of death may be either fully attributable or sometimes attributable to alcohol or drugs. Some contributory causes of death are explicit in their mention of alcohol or drugs. Examples include alcoholic cirrhosis of the liver (ICD-9 code 571.2), alcohol and drug dependence syndromes (ICD-9 codes 303 and 304, respectively), and drug poisonings (ICD-9 codes E850 through E859). All deaths of this sort are fully, or 100%, attributable to alcohol or drug abuse and are considered direct AOD-related deaths.

Other contributory causes of death are related only sometimes to alcohol or drugs. For example, epidemiological studies have shown that, among persons over 35 years of age, 60% of deaths due to chronic pancreatitis (ICD-9 code 577.1) and 75% of malignant neoplasms of the esophagus (ICD-9 code 150) are alcohol-related. For persons of all ages, 42% of motor vehicle traffic and non-traffic deaths (ICD-9 codes E810 through E825) are alcohol-related. The appropriate percentage of such indirectly attributable deaths are also counted toward totals for AOD-related deaths.

The tables on the following pages characterize the different diseases, injuries, and accidents by: name, ICD-9 or ICD-10 code, age of inclusion, and percent attributable to alcohol or drugs. Information sources are listed below.

## Appendix A: Technical Notes

Disease Category	ICD-10 Code	ICD-9 Code	Attrib	Age
<b>Diseases Directly Attributable to Alcohol</b>				
Alcoholic psychoses	F10, F10.3-F10.9	291	100%	>=15
Alcohol dependence syndrome	F10.2	303	100%	>=15
Alcoholic polyneuropathy	G62.1	357.5	100%	>=15
Alcoholic cardiomyopathy	I42.6	425.5	100%	>=15
Alcoholic gastritis	K29.2	535.3	100%	>=15
Alcoholic fatty liver	K70.0	571.0	100%	>=15
Acute alcoholic hepatitis	K70.1, K70.4	571.1	100%	>=15
Alcoholic cirrhosis of the liver	K70.3	571.2	100%	>=15
Alcoholic liver damage, other	K70.2, K70.9, K70	571.3	100%	>=15
Excessive blood level of alcohol, toxic effect of alcohol	R78.0, T51	790.3. 980	100%	>=0
Accidental poisoning by alcohol	X45, Y15	E860	100%	>=0
Nondependent abuse of Alcohol	F10.1	305.0	100%	>=0
Alcohol-induced pseudo-Cushing's syndrome	E24.4	Not Available in ICD-9	100%	>=15
Degeneration of nervous system due to alcohol	G31.2	Not Available in ICD-9	100%	>=15
Alcoholic myopathy	G72.1	Not Available in ICD-9	100%	>=15
Maternal care for (suspected) damage to fetus from alcohol	O35.4	Not Available in ICD-9	100%	>=15
Newborn affected by maternal use of alcohol	P04.3	Not Available in ICD-9	100%	>=0
Fetal alcohol syndrome (dysmorphic)	Q86.0	Not Available in ICD-9	100%	>=0
Suicide attributable to alcohol	X65	Not Available in ICD-9	100%	>=0
Alcoholic Pellagra	E52	265.2	100%	>=0
<b>Diseases Indirectly Attributable to Alcohol</b>				
<b>Neoplasms</b>				
Breast	C50, D05	174.0-174.9, 233.0	13%F	>=35
Esophagus	C15, D00.1	150.1-150.9, 230.1	75%	>=35
Larynx	C32 , D02.0	161.0-161.9, 231.0	50%M, 40%F	>=35
Lip, oral cavity, pharynx	C00-C14, D00.0	140.1-141.9, 143.0- 149.9, 230.0	50%M, 40%F	>=35
Liver	C22, D01.5	155.0-155.2, 230.8	29%	>=35
<b>Cardiovascular</b>				
Cardiomyopathy	I42.0 - I42.2, I42.5, I42.7- I42.9	425.1, 425.4, 425.9	40%M	>=35
Hypertension	I10-113, O10-O14, O16	401.0-404.9, 642.0, 642.2, 642.9	11%	>=35
<b>Digestive System</b>				
Cirrhosis	K71.7, K74.5-K74.6	571.5	74%	>=35
Duodenal Ulcers	K26	532.0-532.9	10%	>=35
Pancreatitis, acute	K85	577.0	47%	>=35
Pancreatitis, chronic	K86.1- K86.3, K86.9	577.1, 577.2, 577.9	72%	>=35
<b>Other Diseases or Conditions</b>				
Epilepsy	G40.3,G40.4,G40.6,G40.9	345.1, 345.3, 345.9	30%	>=15
Seizures	R56	780.3	41%	>=15
Tuberculosis	A16-A19	011-013, 017, 018	25%	>=15
Accident or Injury Causes : Motor vehicle traffic and non-traffic accidents	V02-V04, V09.0, V09.2, V12-V14, V19.0-V19.2, V19.4-V19.6, V20-V79, V80.3-V80.5, V81.0-V81.1, V82.0-V 82.1, V83-V86, V87.0-V87.8, V88.0-V 88.8, V89.0, V89.2	E810-E825	42%	>=0

## Appendix A: Technical Notes

Disease Category	ICD-10 Code	ICD-9 Code	Attrib	Age
<b>Diseases Indirectly Attributable to Alcohol (continued)</b>				
Pedal cycle and other road vehicle accidents	V01, V05–V06, V09.1, V09.3–V09.9, V10–V11, V15–V18, V19.3, V19.8, V19.9, V80.0–V80.2, V80.6–V80.9, V82.2–V82.9, V87.9, V88.9, V89.1, V89.3, V89.9	E826-E829	20%	>=0
Water transport accidents	V90-V94	E830-E838	20%	>=0
Air & space transport accidents	V95-V97	E840-E845	16%	>=0
Accidental falls	W00-W19	E880-E888	35%	>=15
Accidents caused by fire	X00-X09	E890-E899	45%	>=0
Accidental drowning and submersion	W65-W74	E910	38%	>=0
<i>Suicides due to alcohol or drugs are now considered direct AOD-related deaths, other suicides are not apportioned. This brings our definitions into compliance with NCHS definitions.</i>				
Homicide & other purposely inflicted injury	X86–Y09, Y87.1	E960-E962, E962.1-E969	46%	>=15
Other	X31, W79, W50-W52, W20- W34, Y15-Y19	E901, E911, E917-E920, E922	25%	>=15
<i>Other category includes: Excessive cold, Choking on food in airway; Striking against or struck accidentally by objects or persons; Caught accidentally in or between objects; Accidents caused by machinery; Accidents caused by cutting and piercing instruments.</i>				
<b>Diseases Directly Attributable to Drugs</b>				
Drug psychoses	F11-F16, F18-F19	292	100%	>=0
Drug dependence syndrome	F11-F16, F18-F19	304	100%	>=0
Polyneuropathy due to drugs	G62.0	357.6	100%	>=15
Drug dependence during pregnancy	F11-F16, F18-F19	648.3	100%	>=0
Suspected damage to fetus from drugs	O35.5,	655.5	100%	>=0
Noxious influences affecting fetus	P04.4	760.7	100%	>=0
Drug reactions, intox., withdrawal specific to newborn	P96.1	779.4, 779.5	100%	>=0
Selected drug poisonings	R78,R78.1-R78.6, T38 ; excludes Y40-59.9 (therapeutic use)	962, 965, 967-971, 977 excludes E930-949	100%	>=0
Selected accidental drug poisonings	X40-X44	E850-E858	100%	>=0
Accidental Poisonings (magic mushrooms, huffing and other drug use)	X46-X49	E861-E869	100%	>=0
Nondependent abuse of drugs	F11-F16, F18-F19	305.2-305.9	100%	>=0
Assault by poisoning using drugs and medicaments	x85	E962.0	100%	>=0
Drug induced myopathy	G72.0	Not Available in ICD-9	100%	
Poisoning by drugs, accidentally or purposely inflicted	Y10-Y14	E980.0-E980.5	100%	>=0
Suicides attributable to drugs	x60-64	E950.0-E950.5	100%	>=0
<b>Diseases Indirectly Attributable to Drugs</b>				
AIDS (from IV drug use exposure)	B20-B24	042.0-044.9	5%	>=15
Cardiovascular				
Endocarditis	I33.0, I33.9	421.0, 421.9	75%	>=15
Other				
Hepatitis A	B15.9	70.1	12%	>=15
Hepatitis B	B16-B16.9	70.2, 70.3	36%	>=15
Hepatitis C	B17-B19.9	70.5, 70.9	10%	>=15

## Appendix A: Technical Notes

### Counties Like Us (CLU)

Knowing that your county has a particular rate for one of the indicators does not help you evaluate the importance of that indicator to your risk profile. You do not know if it is higher or lower than you could reasonably expect. It is more useful to compare your county rate to the state rate, which is the average for the whole state, and to other counties, especially counties that have some characteristics in common with your county. This is especially important when urban rates differ substantially from rural rates. The comparison we present is for a group of counties that are similar in characteristics related to prevention planning: population of young people (aged 10-24), the percentage of deaths in the county that are alcohol and drug-related, and a simple geographic division into Eastern and Western Washington. For each indicator the Counties Like Us rate is the average rate across all of the counties in the cluster.

The groupings for “Counties Like Us” are as follows:

<b>Urban A*</b>	King County
<b>Urban B*</b>	Clark**, Pierce, Snohomish, and Spokane
<b>Urban C</b>	Benton, Kitsap, Thurston, Whatcom, and Yakima
<b>Rural A</b>	Ferry, Franklin, Grant, Klickitat, Okanogan, Pend Oreille, and Skamania
<b>Rural B</b>	Adams, Asotin, Chelan, Columbia, Douglas, Garfield, Kittitas, Lincoln, Stevens, Walla Walla, and Whitman
<b>Rural C</b>	Clallam, Cowlitz, Grays Harbor, Island, Jefferson, Lewis, Mason, Pacific, San Juan, Skagit, and Wahkiakum

\* For comparison, King County is compared to Urban B, but average scores for the indicators in Urban B do not include King County.

\*\* Clark County was previously included in Urban C, not Urban B. Comparisons to versions of this report produced prior to June 2023 will likely have different values for Urban C and Urban B CLU rates.

### Duplicated and Unduplicated Counts

In an unduplicated person count, each person is counted only once in a year for the specified activity or service type, even if they receive that service multiple times during the year. Examples include Temporary Assistance to Needy Families (TANF) Child Recipients, Food Stamp Recipients, and alcohol or drug treatment. Duplicated counts are made of events such as prison admissions, child victims in accepted referrals, or admission to a hospital for attempted suicide. For instance, for each identified child victim in an accepted referral, that “event” is counted. Therefore, a child identified as a victim in more than one referral during the year is included more than once. Additionally more than one victim can be identified in a single accepted referral. Both the victims and the referrals are duplicated.

### Transitioning from Uniform Crime Reporting (UCR) to National Incident-Based Reporting System (NIBRS)

Over 80 years ago, standards were established for the Uniform Crime Reporting (UCR) Program so agencies could report their crime and arrest information in the same format and at the same level of detail and accuracy. Under the traditional UCR system agencies report monthly of the eight (8) "Part One" offenses and values of property stolen, as well as counts of arrests. The FBI Crime Index reports only designated Part One Crimes. These are criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft and arson. This is now referred to as Summary UCR. Most law enforcement agencies report arrest and offense data to the Washington Association of Sheriffs and Police Chiefs (WASPC), which in turn provides data to the FBI's Uniform Crime Reporting Program (UCR).

In 1989, the FBI instituted a new crime-reporting system called the National Incident-Based Reporting System (NIBRS) to provide a more detailed and comprehensive view of crime in the United States. While Summary UCR collects only counts on eight (8) offense types, NIBRS collects information on twenty-three (23) different offenses. Some of the additional offenses in NIBRS are forcible and non-forcible sex offenses, fraud, kidnapping, and drug violations.

Washington State has transitioned to the NIBRS system for reporting. This was a costly staged process which was particularly difficult for smaller communities. Washington State became certified to begin submitting NIBRS data to the FBI in December 2006. Summary reporting was phased out and all reporting agencies began submitting NIBRS data by January 1, 2012. The rates for Part One offenses we previously reported should show no impact of the system change. However, the rates for total arrests by age group include all arrests for offenses reported which now cover the twenty-three offense categories rather than the previous eight categories. Care must be taken when interpreting the yearly trend of "total arrest" rates for an area. In areas where large amounts of arrests are likely for crimes not previously reported, a substantial increase in total arrests could be expected starting with the 2012 data.

## Appendix A: Technical Notes

### Uniform Crime Report - Non-Reporting Police Jurisdictions

Most law enforcement agencies report arrest and offence data to the Washington Association of Sheriffs and Police Chiefs (WASPC), which in turn provides data to the FBI's Uniform Crime Reporting Program. This is the source of our data. Some jurisdictions do not report all arrests and offenses, some report partial years, and some withhold certain categories of arrests or offenses. Reporting is voluntary for arrests and offenses. Offenses are more likely to be reported since some funding is associated with reporting. Offenses are incidence reporting. When more than one victim is involved an offence is filed for each victim. Multiple property violations performed at the same incident are counted as one offence.

However when both types of events happen, only the victim incidents are reported as offenses. Offenses focus on the nature of the crime, while arrests focus on the apprehended accused perpetrator. Many offenses occur without arresting perpetrators. Sometimes charges are dropped and sometimes no perpetrator is ever found. No perpetrator age can be assigned to offence data so the entire age range of population is used as the denominator. Prior to 2012 data reported to WASPC in NIBRS format, which was not yet compatible with UCR output reports, was only included in their reports to the FBI. We listed those jurisdictions as non-reporting in UCR although WASPC considered them to have reported. Only part one offenses are reported in the Uniform Crime Report, some agencies have no part one crimes to report. Those agencies are listed with zero events, not as non-reporting.

Information on the Non-reporting Population and Non-reporting Agencies are available only in the individual county, district, and locale level reports. Each area report shows how and when that area's police jurisdictions reported data to the Washington Association of Sheriffs and Police Chiefs. If your area is one with jurisdictions having a significant amount of incomplete data, be very careful that you adjust your risk assessment to reflect this. In other words, the reported arrest rates may not adequately reflect the entire area. This will be true especially in those cases where the non-reporting police jurisdictions have either very high or very low arrest rates, compared to the rest of the area.

In order to compensate for missing police reports, we have adjusted the denominator in the rate calculation so that it reflects only the proportion of the area for which we do have data. For instance, say area A, with a population of 40,000, has eight police districts. Now, if one of the police districts in the area did not report their arrests, the number of arrests would not be representative of the whole area. Therefore, we would not want to use the population of the whole area in the denominator because that would make the rate lower than it should be. The solution used in this report is to subtract the population of that missing police district from the area population. We follow the same procedure for police districts that report partial years: if they report only six months, we use only half of the population to calculate the rate.

Due to the uneven geographic distribution of crime, missing police data can cause spikes or dips in the trend data comparison of multiple consecutive years. We do not run into this problem in the state report because the county rates there (as opposed to the individual county reports) only report 5-year averages. However for individual county reports and reports for smaller areas like locales or districts the trend data can become unstable due to non-reporting. Alternately, the conversion of data from certain police jurisdictions to other areas like locales may not apportion directly causing too much of the data to be apportioned based on population rather than clearly assigned to one area. We use a weighted reliability index (WRI) to determine when the conversion is no longer reliable. An explanation of that process follows. We have tried to compensate for these and other issues by suppressing data which is likely to be affected.

### CORE Conversion Process and Weighted Reliability Index

CORE obtains data from many government agency sources. The data are represented as events (e.g. # of teen births, # of crimes, # of clients) occurring within a given geographic unit. This geographic unit is generally the smallest that can be obtained from the agency source. For example, data may be available by school district, by zip code, by census tract or by police jurisdictions. CORE calls these geographic units the "source geography."

CORE data is usually reported at the geographic level of county or community – called in the rest of this report the "destination geography." Therefore, data usually needs to be converted from the "source geographies" to the "destination geography."

The conversion is based on an overlay process, in which the events occurring in small source geographies that are totally contained within the destination are combined with synthetic estimates of events occurring in source geographies that are partly within and partly outside the destination geography. The synthetic estimation is weighted by the population distribution between the source and destination areas. Therefore, it requires a small-scale count of the population underlying both source and destination geographies. This process is explained below through examples.

## Appendix A: Technical Notes

Data being converted from a smaller geography (source geography) like school district to a larger geography (like a county) is usually fairly reliable because most of the smaller pieces fit neatly and wholly into the new geography. (See example 1).

The rectangles represent two possible data source geographies (one densely populated school district – Urban School District -- and one thinly populated school district – Suburban School District -- surrounding it). The large oval represents a report's destination geography such as county, locale or network.

The following statements refer to example 1:

All of the events occurring in the urban school district can be attributed entirely to the destination geography.

The events occurring in the split source geography (suburban school district, in this example) are distributed to the destination geography in the same proportion as the underlying population is distributed. If 40% of the suburban school district population lies within the destination geography, then 40% of its events are attributed to the destination geography.

These events are split by age, race and gender subgroups whenever possible, as are the populations. So the synthetic estimation is broken down that way also. If 40% of the young White population of the suburban school district lives in the destination geography, then 40% of the events occurring to young White people are attributed there. If, on the other hand, only 10% of the young American Indian population of the suburban school district lives in the destination geography, then only 10% of the events occurring to young American Indian people are attributed there.

While we can develop an algorithm to distribute all source geography populations to all destination geography populations, such a distribution will not always be reliable.

For example, see the situation depicted in Example 2.

Here we are trying to estimate the number of events contained in two very small destination geographies (the ovals). Could this synthetic estimate be reliable? Perhaps, if the small area within the ovals really is representative of the whole area -- but more likely not.

A statistic is needed to assist researchers in determining when a destination geography's events cannot be reliably estimated using these processes. For CORE, that statistic is the Weighted Reliability Index (WRI).

The amount of overlap between source and destination populations can vary from less than 1% to 99% -- only a little of a source population can live in a destination, or almost all of the source population can live in a destination.

The key underlying assumption behind the CORE Weighted Reliability Index is as follows: ***When most of the population for the source geography is also in the destination geography, we can be more certain of the reliability of the estimation process.***

Therefore, the weighting process lets us calculate, for each source-geography/destination-geography combination, the reliability of each destination geography's estimate.

Example 1

Example 2

## Appendix A: Technical Notes

In the figure for Example 3, for zip code 2 the source area population is mostly in the destination oval (encased in the dashed line), but the majority population from the other contributing source area is not.

### Example 3

The oval represents the destination geography boundary -- the edge of a destination city. The rectangles represent the source geography boundaries for two zip codes. The numbers are population of people living in each place: 10 people live both in Destination City and in the first source (Zip code 1), and 900 people live both in Destination City and in the second source (Zip code 2).

The formula for Weighted Reliability Index for a single destination is the total weighted destination population as a percent of total population. To understand this formula, see the calculations below.

	Percent of source population attributed to destination	Multiplied by the population attributed to the destination	Amount of destination population imputed
zip code 1	$10/80 = 12.5\%$	* 10	1.25
zip code 2	$900/1000 = 90\%$	* 900	810.00
	<b>Total for Destination</b>	<b>910</b>	<b>811.25</b>

In the above example, the Weighted Reliability Index for Destination City is  $811.25 / 910 = 89\%$ . Basically, 89% of the event locations were directly attributed to the area they occurred. Along with the WRI a cut point for reliable reporting is needed. When half or more of the events have been imputed to the destination geography, rather than directly attributed from the source geography, the data is considered unreliable and rates are suppressed.

## Appendix A: Technical Notes

### WRI for Areas with Non-Reporting of Data

There is a second way that data may become unreliable. Some police jurisdictions do not report data to the state sources, use a reporting method which cannot be included in our files, fail to report for either adults or juveniles, or report for only part of a year. This is particularly true for court data – arrests or offenses. In order to accurately evaluate the reliability of data conversions for destination geographies containing those jurisdictions, non-reporting jurisdiction populations were excluded from the calculations for WRI and the non-reporting jurisdiction issue is evaluated separately.

Partial Reporting, part of a year or part of a population, is also taken into consideration when computing the percentage of non-reporting in a destination geography. Adult and juvenile rates are evaluated separately. Some areas may pass for one, but not for the other due to their reporting habits. For partial year reporting the percentage of the year with data reported is used to evaluate each category.

*Example 4*

The second test of reliability is to determine whether the population for the rate is adequately represented. In this example, allow the numbers inside the oval to represent a population of 100 allocated to the destination geography. Two source jurisdictions are entirely located in the destination geography represented by the oval. Their events when reported would be directly attributed. The non-reporting jurisdiction would have its population of 50 excluded from the calculation for WRI, while the reporting jurisdiction would have its population included in the calculation. In this case the completely contained reporting jurisdiction would represent 30 of the remaining 50 population (60%) in the destination oval. The imputed portion is 40% allowing the destination geography to pass the first test for WRI.

CORE also requires that the excluded non-reporting jurisdiction population (50 of 100) are less than 50% of the total population for the destination geography. With an exclusion rate of 50%, this destination geography would fail the reliability criteria.

The reliability of arrest rates is calculated each year based on non-reporting. For five year rates, three out of five data years must be considered reliable by both tests and the average of the yearly WRI for all five years must reach the WRI cut point value.

## Appendix A: Technical Notes

### Rates: why is “raw data” converted to rates?

In order to make comparisons between counties and the state, and between counties that have different sizes, we use rates to describe an event in terms of a standard size population—either per 100 (percent), per 1,000 or per 100,000. For instance, what does it mean if County A has 42 alcohol retail licenses, and County B has 399? Does it mean that based on this indicator, the risk factor (Availability) is much higher in County B than it is County A? No, not if County B is a much bigger county. If County B is bigger, then the “rate” of liquor licenses per population might be the same or even lower. The only way to compare them is to convert the raw numbers to rates, based on the same population factor.

For instance:

County A: # of licenses – 42, # of persons (all ages) – 14, 297

County B: # of licenses – 399, # of persons (all ages) – 186,185

To calculate the rate per 1,000:

$$42 / 14,297 = .002937 \quad .002937 \times 1,000 = 2.94$$

$$399 / 186,185 = .002143 \quad .002143 \times 1,000 = 2.14$$

So the rate of alcohol retail licenses is 2.94 per 1,000 people in County A, and 2.14 per 1,000 people in County B.

### Standardization of CORE Indicators

An individual indicator by itself is interesting because you can compare your county (school district, locale) to all other counties (school districts, locales), and to the state. You can also look at how the indicator changes over time. But it is more difficult to compare several indicators to each other, for example, if you want to see which indicator of risk is extremely high and which is just average. For instance, you cannot directly compare the number (or rate) of alcohol retail licenses to the number (or rate) of Food Stamp recipients—this would be like comparing apples and oranges and would not be meaningful.

The preferred way to compare different indicators is to find out how much each individual indicator varies from some common point; in CORE reports the point we use is the indicator’s value for the state. In more technical terms, we transform the original absolute rates to a common scale: the relative deviation from the state rate. This is called a standardized score, and is based on the mathematical calculation of the standard deviation. For a particular indicator, the county (school district, locale) with the highest absolute rate will have the highest standardized score. A standardized score of 1.2, for instance, means that the county’s rate is 1.2 standard deviations above the state rate, and a –1.2 would be 1.2 standard measures below the state rate. Approximately 95% of all counties (school districts, locales) in the state will fall between +2 and –2 standard deviations from the state rate.

Here is an example. Let’s say an indicator for extreme family economic deprivation (Food Stamp recipients per 100 people) has a standardized score of 2.5 and an indicator for availability of drugs (alcohol retail licenses per 1,000 people) has a score of 1.2. We can say that, other things being equal, the county (school district, locale) in question has a higher risk for extreme family economic deprivation than for availability of drugs.

CORE indicators are standardized using a formula similar to the calculation of a z-score. A typical z-score for an observation (a county, a locale, a school district) is calculated as a difference between an observation and the mean (average) of all observations, divided by the standard deviation for all observations. A CORE standardized score for a county (school district, locale) is instead calculated using the state rate in place of the mean for all counties (school districts, locales). A standardized CORE indicator avoids the problem of using an unweighted mean of all counties (school districts, locales) that would give counties of very different size equal weight, and therefore provides a more meaningful comparison.

CORE standardized indicators for counties are calculated using the following formula. The same formula is used for locales and for districts, by substituting locale or district rates for county rates in the formula.

$$\text{standardized score} = \frac{\text{county rate} - \text{state rate}}{\sqrt{\frac{\sum_{i=1}^N (\text{county rate}_{.i} - \text{state rate})^2}{N}}}$$

## Appendix A: Technical Notes

### Graduation and Dropout Data Methodology Changes

Beginning with the 2011-2012 school year major changes were made in how to measure dropouts and graduation for students in Washington State. "Graduation Rate Calculations in Washington State", a March 2012 publication by the Office of Superintendent of Public Instruction, does an excellent job of explaining these changes. The following chart is an extract from that document (page 4).

#### How do the methods differ?

Estimated Cohort (old method) Prior to 2011-2012 school year	Adjusted Cohort (new method) 2011-2012 and beyond
Is a composite cohort. Uses dropout rates for all grades within one school year to determine an estimate of the number of students graduating.	Is an actual cohort; individuals are tracked over 4 years with adjustments made for transfers in/out.
Allows for alternate expected graduation year for students in special education or ELL programs.	Imposes concept of four-year timespan. There are no adjustments for Special Ed or Limited English students who are expected to take longer.
May adjust for deficient credits.	All students are expected to graduate four years after first entering 9th grade. Transfers from out of state or other districts who are credit deficient may not be reclassified into a lower grade.

### Roadblocks to learning in our communities.

#### Academic Achievement, School Climate, and Extreme Family Economic Deprivation.

##### Academic Achievement:

The CORE measures academic achievement using three groups of indicators:

1. Poor Academic Performance on statewide tests (risk factor);
2. Students who graduate from high school (protective factor);
3. Students who drop out of high school, failing to complete their education (risk factor).

##### 1. Student Assessment

The indicators for Poor Academic Performance, are available for grades 4, 7 and 10. The indicators are calculated as a percentage of students tested in each grade assessment. Earlier years of information are from the Washington Assessment of Student Learning (WASL). In 2009-10 the WASL was replaced by the Measurements of Student Progress (MSP) for grades 3 through 8 and the High School Proficiency Exam (HSPE) for grade 10. Some districts have chosen to test students in both grades 9 and 10 for the 10th grade assessment, giving freshmen a second chance to pass the test. Passing the HSPE is essential for high-school graduation. Ninth graders who were tested are included with the tenth graders in the calculation of the Academic Achievement indicator for grade 10.

##### 2. Graduating from High School

According to the National Institute on Drug Abuse (NIDA), protective factors are characteristics that decrease an individual's risk for a substance abuse disorder. Among the protective factors listed are: aspirations or expectations to go to college, high commitment to schooling, education is valued and encouraged, and academic competence. Children who graduate share many of these protections, therefore, CORE has chosen to categorize On-time and Extended Graduation as protective factors. Two types of high school graduation rates are listed in the CORE reports, On-time Graduation and Extended Graduation.

For **On-time Graduation**, a student must graduate within four years by completion of the graduation requirements. The Estimated Cohort (old method) On-Time Graduation rate formula uses dropout rates discussed below; the formula is:  $100 * (1 - \text{grade 9 dropout rate}) * (1 - \text{grade 10 dropout rate}) * (1 - \text{grade 11 dropout rate}) * (1 - \text{grade 12 dropout rate} - \text{grade 12 continuing rate})$ . The on-time graduation rate is the inverse of the cumulative dropout rate with the senior class adjusted to remove those

## Appendix A: Technical Notes

students who stay in school for more than four years from the calculation. The Adjusted Cohort (new method) rate divides the number of students graduating in their fourth year by the adjusted freshman cohort for those students.

**Extended Graduation** requires more resources and dedication from district staff. It includes those students who stay in school after their senior year and complete the graduation requirements. Districts which have high extended graduation rates may also have higher dropout rates since the students attempting extended graduation are also at highest risk of again dropping out. A large difference in the size of the on-time and extended graduation rates may indicate that a district or school is working hard to keep students in school or to have dropouts return to school and attempt to graduate. The Estimated Cohort (old method) Extended Graduation rate formula is: (the number of on-time and late graduates)/(the number of on-time graduates divided by the on-time graduation rate). The Adjusted Cohort (new method) rate is the number of students graduating within five years divided by the adjusted cohort for the freshman class of the graduates.

### 3. Dropping Out of High School

Two types of high school dropout rates are listed in the CORE reports, Annual (Event) Dropouts and High School Cohort (Cumulative) Dropouts.

The **Annual Dropout** rate measures the proportion of students enrolled in grades 9-12 who drop out in a single year without completing high school as a percentage of all students in grades 9 through 12 that year. When districts try new policies or projects to keep students in school the impact of those actions will be more immediately visible in this rate. This rate is much more difficult for the data provider to compute from data stored within the new cohort designations for students as it draws information from four separate cohorts. Data production during the transition to the new method will likely have at least one year of data which will probably never be produced. The formula and the data for this rate have not been changed by the new methodology.

The **High School Cohort Dropout** rate (may also be referred to as the longitudinal, cumulative, or freshmen cohort dropout rate) measures what happens to a single group (or cohort) of students over a period of time. This rate is most useful for seeing the long-term impact on the community. The Estimated Cohort (old method) Cohort (Cumulative) Dropout rate formula is:  $100 - (100 * (1 - \text{grade 9 dropout rate}) * (1 - \text{grade 10 dropout rate}) * (1 - \text{grade 11 dropout rate}) * (1 - \text{grade 12 dropout rate}))$ . The cohort rate is significantly higher than the annual rate for the same area as it measures the cumulative effect of the multiyear loss of students from their freshmen cohort. The Adjusted Cohort (new method) rate is the number of students dropping out prior to graduation divided by the adjusted cohort for the freshman class of the graduates.

### **School Climate:**

Indicators listed under School Climate give an idea of how safe students may feel in their school or how committed they and their fellow students are to learning. These indicators are Weapons Incidents in School (rate per 1,000 students) and the protective factor, Regular Attendance, which replaced the risk factor Unexcused Absences for Students in Grades 1 to 8. When weapons incidents are common or it is acceptable for young students to frequently miss school without explanation the school climate is not conducive to learning.

### **Extreme Family Economic Deprivation:**

Hungry students find it difficult to focus their attention long enough to learn. Those with inadequate housing or clothing may find it difficult to interact with their peers. There are three indicators which evaluate levels of poverty.

1. **Child Recipients of TANF (Temporary Assistance for Needy Families)** gives the rate of children from birth to 17 who receive income assistance. The child must be a citizen or legal alien and their caregiver must not have exceeded the 60 month maximum. There is a requirement for the adults to seek work and an income evaluation. Teen parents must attend school.
2. **Supplemental Nutrition Assistance Program (SNAP) Recipients.** The SNAP program was formerly called the Food Stamps program, and shows a more generalized level of need. While the persons must be citizens or legal aliens who seek work and meet the income guidelines there is no cutoff time limit for benefits.
3. **Students Eligible for Free or Reduced Price Lunch** gives a much broader look at poverty in your area. Children of people who are “working poor”, who have exceeded 60 months in benefits, are not legal aliens, or are not seeking work can still receive meals and free milk. The free guidelines are at or below 130 percent of the Federal poverty guidelines and the reduced price guidelines are between 130 and at or below 185 percent of the Federal poverty guidelines.

## Appendix A: Technical Notes

However, there are other ways to qualify. Many persons earning a gross income up to 200% of the Federal Poverty Level apply for income assistance because their children are automatically eligible for free school lunch if they meet the adjusted income guidelines. These are sometimes called \$0 grants. Households receiving assistance under SNAP, TANF for their children, Food Distribution Program on Indian Reservations (FDPIR) or, with children who are homeless, fostered, runaway, migrant, or in Head Start Programs are eligible for free benefits. If any child or household member receives benefits under Assistance Programs all children who are members of the household are eligible for free school meals.

### Suppression Codes for Yearly Trend Data

<b>UN</b>	Unreliable conversion of events to report geography, failure of weighted reliability index (WRI). The WRI evaluation process is further explained in the section labeled 'CORE Conversion Process and Weighted Reliability Index'.
<b>SP</b>	Suppressed by agreement with data provider when denominator is below agreed level and may compromise a person's rights to confidentiality.
<b>SN</b>	Small Number Sample. Geography has less than 30 events in the denominator. More reliable at 5 year level or for larger area.
<b>NR</b>	Not reliable due to non-reporting of police jurisdictions data. Fifty percent or more of the population is not represented by the data due to non-reporting jurisdictions.
--	Data which are unavailable and not expected to be provided at a later date. Signifies a gap in data collection such as during the COVID-19 pandemic.

### Changes in Hospitalization Data

When CHARS was first developed there were basically two types of patients: inpatients and outpatients including emergency department. Since that time, however, a third category of patients has come into being, and has grown. These are known as "observation" patients. Some observation patients may be similar to outpatients in that their lengths of stay at the hospital can be measured in hours. Other observation patients are more like inpatients; their lengths of stay can be a full day – or longer. Up until May 2007 CHARS only collected data on inpatients. Observation patients with lengths of stay exceeding a day or more were previously not reported to CHARS. This situation becomes even more concerning because the designation of a patient as either an inpatient or an observation patient is based upon each patient's payer's criteria. Hence, one patient may be deemed an inpatient by their payer and have their data reported to CHARS, while another patient with exactly the same clinic conditions and treatments – but with a different payer – may be deemed an observation patient and did not have their data reported to CHARS in the past. Revisions have been made which add these observation events to CORE from 2008 forward. This will change the trend data for those years for any rate containing data from CHARS.

In addition to the inclusion of observation admissions, supplemental diagnosis fields and supplemental external cause fields have been added to the analysis of patient data. Previously analysis was limited to the first nine diagnosis and the first external cause code. Both of these changes may increase the rates seen in data trends for 2008 to the present.

Data on hospital stays after October 1, 2015 uses ICD-10 definitions. Both ICD-9 and ICD-10 categories used to define alcohol, drug, suicide and injury accidents are detailed in the section called Counting Alcohol- or Drug-related Deaths. CHARS events use only directly attributable diagnosis definitions.

## Appendix B: Adjusted Population for Areas Not Reporting Arrests or Offenses

### Whitman County

#### Populations subtracted for police agencies not reporting

Police agencies are not required to report arrests or offences to UCR/NIBRS, they do so voluntarily. For a variety of reasons, a jurisdiction may report part or none of the arrests or offences for a year. In these cases, the denominator is the population of the areas that did report. For example, if juvenile arrests for one agency are not reported, the juveniles for that jurisdiction are not included in the population denominator either.

The tables below show the values that comprise the adjustment for the community in this report for each age range we report.

\* "% Subtracted" is the percent of the community's population subtracted for non-reporting.

\* "Subtracted" is the amount subtracted.

\* "Persons" is the population of the entire community.

\* "Adjusted Pop" is the denominator used to calculate indicator rates.

We suppress the yearly rates when (1) 50% or more of the population of your community live in areas which did not report to UCR/NIBRS for the year, or (2) more than 40% of the reported events (arrests or offences) have been apportioned, or synthetically estimated, using the CORE Conversion Process described in the Technical Notes section. Note that if most of the crime in a community occurs in an area which did not report, the adjusted yearly rates would be artificially low.

See Uniform Crime Report - Non-Reporting Police Jurisdictions in the Technical Notes section for additional detail on the reason and method of subtracting population for non-reporting.

Indicators using All Arrests for 10-14 year olds as the denominator have 5 year rates which represent 96.5% of the population.

	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023
